>for operation at rugged qrn/rm when you really need to get
>through??ka9emp

Indeed some codes do very well in comparison to analog AM voice. The
best ones are coherent uniform codes, such as trellis codes. And they
are most effective when the modulation used is also coherent and uniform,
such as PSK, MSK, or some other M-ary modulation. On Off Keying, OOK,
is about the worst possible modulation method for effective code
transmission, and codes with no error detection/correction features
are worse than codes which have them.

Even given that, however, OOK Morse can still often beat analog AM
voice under severe conditions, though that is highly dependent on
the skills of the operators involved. SSB and FM modulations also
handily beat AM under rough conditions. Fortunately, AM voice is
rarely used on amateur bands today, so the point is rather moot.

>Am I correct? If I am, does anyone have any suggestions?
>
>- Gary KB0QGE

There will be some interaction, but it usually is not serious.
In some cases, such as circularly polarized satellite antennas,
the introduction of a metal mast into the antenna near field
does significantly disturb pattern circularity, and non-metallic
masts should be used instead. But for most uses, don't worry
about it.

Anyone have any mods for the Icom IC-W32A or IC-W31A dual band HT?
I have searched the various archives at BARC, QRZ, Oakland, Buffalo, and
more with no luck. HELP!!!!

4442. Plate voltages

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-05 00:00:00 UTC
From: gbostick@luna
Message-ID: <536gk8$o4j@news.usf.edu>
Source record: 215489
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

In many of the HF amps for amateur radio there is a cw/ssb switch that changes the plate voltage from low on cw to high on ssb. I have read that this is to maintain efficiency at the different power inputs used. The high plate voltage makes sense, in that for a given power level a lower current would be required. To run at a lower voltage, thus requiring a higher current at a given power does not make sense. So, if you can run 1000W input with 2500V @ 400MA, what is the reason for lowering the voltage to 1700V and then having to push 588MA ? What is the criteria for selecting the lower voltage value?

This is an equal opportunity question open to all that would like to share their answers, as I am a bit weak in the hi pwr linear amp design department.

4448. CFS & CFJ Murata ceramic filters

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-05 00:00:00 UTC
From: hi80@pipex.dial.com
Message-ID: <3256e419.3197544@newnews.dial.pipex.com>
Source record: 215495
Cross-posted to: alt.radio.scanner.uk,alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave,sci.electronics.repair,rec.radio.amateur.misc,rec.radio.amateur.homebrew

Does anyone know of a supplier of the full range of CFS or CFJ Murata filters, preferably in the UK? I know Cirkit sell them, but their range is limited; the narrowest one they sell is 1 khz, while I am looking for 300hz or 500hz. I would also like to find a supplier of Collins mechanical filters and Hy Q or similar crystal filters. Again, I know these are sold by manufacturers such as AOR or Kiwa, but they seem to rather more expensive than they should be, as they are sold as spares or accessories for their products.

I intend to replace some of the filters in my NRD535, so if anyone has the replacement Crystal filters for the 535 at a good price, I may be interested. I have a 1.8khz filter for the NRD that I would like to exchange for for the 300hz, 500hz or possibly the 1000hz.

Finally, I am looking for a design of a loop antenna similar to the KIWA MW loop. Unfortunately, I can't possibly afford the 350 UKP price of the KIWA, much as I would like to buy it, so building a similar design(balanced loop with DG Mosfet amplifier and bandwidth control) is the only alternative. Has anyone built a design by GF Maynard called the "WQ medium wave loop". This appeared in the UK "Shortwave magazine" in November 1986, and looks very impressive. However, the construction is VERY complex, so I would like to gather any opinions before starting on the project myself.

TIP FOR UK LOOP FANATICS:
Any experimenters with loops might like to know that ARGOS sells a product called a "TV Turntable" for around 7UKP, which is perfect for mounting a rotating loop, especially if it's completed project and a smart appearance is needed. AFAIK it is only available at ARGOS superstores. I have had difficulty in finding very wide diameter plastic pipe(12 to 24 inches) or something similar, again for loops. Any ideas?

Regards,

Joe Kirlew

Lucky us people of Holland (or if you prefer: The Netherlands), since our
powerlimit used to be 100 Watts, so no discussion neccesary.
Nowadays the limit has been raised to 400 Watts PEP.

On Sat, 5 Oct 1996, Burt Fisher wrote:

> -
>

Burt, first of all, you are a genius. To make the text of your message an attachment instead of a plainly viewable message, that truly shows your colors.

I especially *LOVED* the part about hams NOT doing the public any good in emergency situations anymore.

YO BURT!!! REALITY!!! Ham Radio is MUCH more effective in emergency situations than cellular telephones. But then of course, living up there in the NE area, you wouldn't know ANYTHING about this, would you???

Of course not.

Afterall, the closest you've ever gotten is some hurricane that just happened to cut an almost due west path across the Atlantic Ocean on the border of warm and cold waters.

Real thrilling. What a real emergency THAT one was.

Truth be known, Burt: You know ABSOLUTELY *NOTHING* about emergency communications. In fact, I'll go so far as to PUBLICALLY *ADMIT* that I don't either.

And to think you call yourself a "real ham".

I'll admit it. I'm still a no-code techie. But given what you said in the attached message, almost ANYONE (short of a complete newbie) knows a heck of a lot more than you do.

Also, what's this about "real hams" not being productive???

YO BURT!!! REALITY!!!

There are MANY hams who work for a living. There are even husbands and wives who communicate with each other via 2 meters and 440 EVERY DAY!!! And to go even one step further, there are KIDS (remember them??) who GO TO *SCHOOL* with their HT's!!!!! In fact Colorado happens to be the home of the BARC Jr. club, which is sponsored by the Boulder ARC!!!

Did you also know that an 11-year old from Ohio talked with NASA Astronauts in the STS-79 mission this past week as everyone from the town mayor to representatives of the Ohio Legislature were present. (Yes, television was also there -- NINEFOLD!!!).

So much for the validity of the comments YOU made in the attached message and what credibility your words had here in r.r.a.m., Burt. Hope you're happy now!!

You still want to write to congress IN FAVOR of the Little Leos NOW, Burt???? If so, I think you'll find yourself a VERY lonely person....

And that leads me to this, Burt: If you HATE the hobby as much you have expressed, then why not just sell your equipment and turn in your license??? That would make things so much simpler, and we wouldn't have to hear your &^$#&(&*%$@# bellyaching!!!!!!!

>We have tried to use windows terminal to "receive a text file" but
>nothing happens. ANY advice would be greatly appreciated (I have
>been voluntered for the job of sorting it out for him, but I only
>understand the PC side & not the radio kit).

Open Hyperterminal for direct connection. Click on properties
in Hyperterminal, choose configure, and change flow control to
none. You have to do this with a 2 wire interface or you'll
receive nothing. Next set the baud, number of data bits, parity,
and number of stop bits to what the Microreader uses. (If you don't
know what these should be, experiment until you get readable text.)

That should be all there is to it.

Gary

And couple that with these wild, crazy, and insane ideas of making ham
licenses EVEN EASIER to obtain, and we're talking about 11 meters all
over again (only FIFTEENFOLD).

Just my humble opinion..... :-)

Have you tried submitting a Form 610 with the explaination that your
license was stolen??? Do you still have the wall section??? If so,
one would think that Xeroxing that and a 610 should do the trick.

Dunno if it can be done online though.

Hope this helps.....

Patrick Cook, KB0OXD

pcook@dimensional.com

P.S.: A photocopy of the wallet section of your license IS just as valid
as the real thing. Just an FYI for future reference. :-)

From: jherman@Hawaii.Edu
Message-ID: <536ftm$lki@news.Hawaii.Edu>
Source record: 215554

Gary Coffman <gary@ke4zv.atl.ga.us> wrote:

``A test sounds like a good idea, Jim. But the contentless contacts...''

(Remember the phrase "contentless contacts", gang...)

``you suggest smell like Dx gaming to me. The purpose of communications
is to communicate, so I suggest we have something to say. Some of
my digital operator friends and I chirped this test idea over on the
air after I shared your message with them. We agreed that what we
need is some standard text to exchange for the test.

``So, after a bit of debate, we decided that we'd just use this message
that you're reading now, verbatim, including the RFC822 header and the
sig, as the test message. What we propose is that I will contact as many
amateurs in as many ITU countries as possible via digital modes, pass this
message to them, and ask them to mail it to their nation's telecommunication
authority responsible for WRC-99 planning. You do the same via CW.

``I agreed to mail a copy of the message to each administration with a
cover letter so that they would have a check text to compare with the
copies received from amateurs in their countries. This will allow
them to see how efficiently and accurately their nation's amateurs
can handle messages with greater than trivial content using various
text transmission methods. Each forwarding amateur should note below
the sig of the message the time, date, and mode used to receive the
message.

``If you are agreeable to this test, I propose that it start on November
1, 1996 and run through November 30, 1996. We'll let the world's
telecommunications regulators be the judges of the test. I know there
are amateurs with digital capability in at least 200 ITU countries,
because I've worked that many. I assume that there are amateurs with
Morse capability in all ITU countries. That gives you an edge. Lets
see what you can make of it. Remember, the message must be delivered
verbatim to count.''

I looked for content - any content - in the above and found none. In
wanting to send the above digitally, you've proven the point I've brought
up before - that the digital modes only encourage hams to write long-
winded stuff that few will ever take the time to read.

I would much rather receive a greeting from someone, telling me about
their rig and antenna than receive what you've written.

You want to sent a large file because you know you'd lose otherwise.
500 CW contacts could be gotten in just one weekend with no sweat.
Heck, I'd collect 500 WX reports from ships via CW each day while in
the Coast Guard (WX observations are taken and passed to shore stations
by every ship worldwide every 6 hours). And a WX OBS certainly has
more content than what you're proposing to pass.

Tuck:

The candidate who we in the Central Division were denied the opportunity to vote for by Mr. Sumner is Mr. Henry Ruh, the publisher of Amateur Television Quarterly Magazine. He is very well qualified for the office of Division Director. The "sin" which Mr. Ruh committed which prevented us from having the opportunity to vote for the much needed change was that he "made money off or Amateur Radio through his magazine."

Actually, in his best year, Mr. Ruh only reported a net operating loss of about $12.00 on his Federal Income Tax from the magazine which is not really a business meant as a money maker but is rather a labor of love designed only to be self supporting. Mr. Ruh even offered to sell the Magazine if he would be allowed to run for office.

I am copying this message to Mr. Ruh's Email address in the hope that he will chime in here and provide all the straight poop, from the horse's mouth so to speak, for the benefit of the newsgroup and Amateur Radio.

Subject:
Re: ARRL Election a Sham, AGAIN!
Date:
Mon, 7 Oct 1996 11:14:18 -0400
From:
ATVQ@aol.com
To:
WA8HSU@netusa1.net

Be it known by all presents....oh, wrong speech.
I, Henry Ruh KB9FO did secure the sacred crest embossed ARRL affidavits, to
run for the office of Director. Ten signatures were required, 19 were on the
petition to run for office. It was sent by FEd Ex and arrived at ARRL HQ. I
received both a FAX and a PERSONAL PHONE CALL from Dave Sumner, K1ZZ
acknowledgint that my petition had been received and was timely.

The petition to run for office was disqualified because even though at the
time it was filed I had a buyer for ATVQ, the sale was not completed although
at the time it was expected to be completed by Oct 1., well in advance of the
actual election.

ATVQ in its most recent year had a gross income of about $26,000 and a
taxable net loss of $29. (in other words I run it as a break even/self
sustaining effort with no pocketable/taxable profit, I have nothing against
profit, I just didn't make any!)

Mr. Sumner called the friday of the deadline to inquire about, and was sent
by fax, the pertinent details of the pending sale.

In a letter received a few days leter, Mr. Sumner explained that my petition
to run was disqualified due to conflict of interest (the magazine business)
and their rules do not allow for any commercial interests in anything

related
to ham radio in order to qualify to run for office. In other words, no
one
who works or ownes a ham related business (one would think the people
most
interested in the success of ham radio) can run for office unless they
first
divest themselves of any such interst.

This automatically means only retired people, jobless people, (at least
nojob
in ham radio) can run for office to run the only ham radio
organization.

Hey, its their rule not mine! I would choose the people who have the
best
interests of ham radio, those who depend on its success to remain
successful,
to run the shop. Its like refusing to hire Mario Andretti as a mechanic
because he works asd a race car driver and therefore must have a
conflict of
interest, since he might not want someone's street car to be able to be
go
faster than his does on the race course!

run 1000 in on cw and in order to run 2kw "PEP" and keep the
plate impedance/efficiency the same, plate voltage was switched.
I don't think you would tune for the 588ma, but some lower number
that would give the same plate load impedance. I think most
tubes like the higher volts.which makes the amp easier to
drive with lower grid current, ssb or cw... Leave the switch
in ssb for all modes.

Hi,

It changes the operating point of the tube, like class A, AB, B, C. In CW you typically run class C. It's a point on the characteristic curve of the tube that dictates how much plate current flows with a certain level of bias. (grid voltage) Go with the higher voltage, and tune the plate to keep within the legal limit. Most tubes drive easier with a higher plate voltage. Go to your local library or maybe some local old timer may have the Eimac 'Care and Feeding of Power Grid Tubes'. It does a great job of explaining the whole deal with load lines, impedances, and all. They're not too tough to understand. Only the Gate 2 Vanity Call operation is beyond comprehension. Cheers!

One of the ham radio magazines in the United States called "73 Magazine"
carried an article on Sealand about 10 years ago. This article included
pictures and a history of the "country". I haven't heard anything about it
since then.

If you can find someone with a library of back issues of "73", perhaps
you can look it up. I'd say the issue was between 1983 and 1987.
Maybe someone in the amateur newsgroups (I'm crossposting this to a couple
of likely sources) knows the exact issue.

Let's see: 4500 on the first day, at $30 a pop = $135,000.
Figure the average governmental key-puncher in Gettysburg makes under
$30,000 a year - the *FIRST DAY* of gate 2 should pay the salary of 4
new employees for the next 365 days.

Let us be generous and give them 2 minutes to enter each application
very carefully - this means the 4 employees should do 960
applications in an 8 hour work day. This means that all of the 4500
+/- applications received on 9/23 should have been completed no later
than Monday 9/30.

Seems to me, there are not enough people entering forms, or they are
trying their damnest to convince me that all government workers are
lazy non-productive slags (which they are not).

Mind you- my 4 employee estimate assumes a full year's employment,
when they could certainly justify getting some temp clericals for 2
months- lets say $15 an hour to be really generous - assuming 40 hour
work weeks, 8 weeks total - this would afford 28 employees.

Seems to me our $30 isn't buying much in the way of "administrative
burden support."

Oh well- at least the basic license in the US is still free (for now
at least......)

>I might be able to get away with 2 bits if the signal waveform
>were a simple square wave,

I can only agree with this if we assume that no dithering is used (and
that the background noise level is well below one quantization step).
When dithering is used, much smaller signals can be detected at low
and medium frequencies. "Fade to noise" is a common test to check the
linearity of a CD-player. Dithered tones at -105 dB or even lower
levels are detected, while you would expect only -96 dB for the 16 bit
CD-system. I don't know how well this can be applied to I/Q
demodulation, but I assume that if the signals of interest are a few
octaves below Fs/2 (say below 5 kHz), one or two extra bits can be
extracted. Some noise shaping tricks might even be usable, but I
haven't looked into it. Anyway, it is very desirable to have 18 to 24
bit DSPs to process the samples from 16 bits ADCs.

>but to recover the more complex waveform
>of QPSK, I need more bits. 4 may do, but 8 works lots better.

If you want to tranfer 28.8 kbit/s through a 3 kHz channel (e.g.
ordinary phone modems) then 8 bits certainly makes sense. However,
when transfering 2 bits/symbol in QPSK even 4 bits sounds quite a lot,
particulary if the sampling frequency Fs is a few octaves above the
tones of interest, when some extra resolution can be obtained from the
dithering effects of band and/or equipment noise.

>So a 2 bit span reduces the usable dynamic range by 12 db, 4 bits
>by 24 db, and 8 bits by 48 db.

Yes, the minimum _usable_ signal must be greater than the quantization
step by several dBs and several tens of dBs for extremely complex
waveforms.

This is nitpicking, but the dynamic range for analogue receivers are
usually defined between strong off channel signal(s) and the noise

floor (which depends on the detection bandwidth). The ratio is not between strong signal(s) and a usable signal.

>Note, the A/D can *handle* a wider span than that, but if my
>desired signal plus other passband crud gets within 4 bits of
>either limit, it clips, and I can't process it properly.

You must have quite a few strong undesired signals in the ADC pass-band in order to get the peak voltages aligned at the same time to have the signal clipped with 24 dB headroom. To completely avoid clipping in a two tone IMD test, each tone must be 6 dB below full scale.

>So
>that effectively reduces my dynamic range by 8 bits, or 48 db.
>Or stated another way, the sum of my signal and channel crud
>has to stay 24 db below the all 1s condition and my signal

>you could say I have 72 db of dynamic range with the current
>setup. I don't think that's the proper way to look at it
>though.

This is of course true that the usable range is less than the converter range, but maybe we should call the usable range something else than dynamic range to be more consistent with terms used with analogue equipment.

<about 24 bit ADC deleted>
>
>The brickwall filters do reduce signals which are more than

>at HF where signals sit cheek by jowl. I need to be able to work
>closer than that to a strong signal. I want to be able to work
>with signals on 1 kHz channel centers at the dynamic signal
>extremes.

You also have to consider the phase noise characteristics of both the transmitters and receivers.

Of course if you are participating in a multi-multi contest with multiple transmitters (>1 kW) on the same premises and on the same band or have a neighbour within a few blocks operating at the same band at 1 kW, you definitely need 24 bits. Some free space loss calculations (assuming far field propagation) are quite interesting in this case.

If you are only dealing with signal comming via the ionosphere, the required dynamic range is much less.

Using similar dynamic range test mehods, the 16 bit ADC would be slightly worse than some mobile HF rigs, but a 20 bit ADC would be superior to the most expensive HF ham rigs.

<about the current 16 bit ADC system>

>the current setup. But that doesn't do much close in.

I do not quite follow in this calculation. Using 64x oversampling, there are 6 octaves between half of the final sample rate (Fs/2) and half the oversampling rate (Fos/2), where you have to fit the slope of the low pass filter. However, since the alias components just above Fos/2 fall high above the audio range, the slope of the filter can extend up to Fos - 20kHz and thus, the slope can be nearly 7 octaves long. With 12 dB/octave, the alias components from Fos-20kHz to Fos are only attenuated by 84 dB, which is not quite sufficient for a 16 bit converter. An additional 6 dB/octave LPF at say 100 kHz would do the trick without adverse effects in the audio pass band.

And the saddest thing about that Bulletin is that it reports that the feds
are surprised at the LACK of numbers of applications. Wonder how long it
would have taken if the expected number of applications had shown up!

4476. Help: RFI with TV

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-06 00:00:00 UTC
From: hbcsc274@huey.csun.edu
Message-ID: <537s3f$g4f@csun2.csun.edu>
Source record: 215320

I just installed a 2-meter 5/8 wave vertical mag mount antenna on top of
the air conditioner on the roof. My radio is a Radio Shack HTX 212
mobile used as a base station. Whenever I transmit on any 2 meter
frequency, channel 18 goes out
on all of my tv's. The tv's are hooked up to cable, and not antennas.
My neighbor's who also has cable has channel 18 go out when I transmit as
well. My minimum transmit power is 10 watts on the HTX 212.
Even at low power, channel 18 goes out with a bunch of snow on the
screen. As soon as I let go of the PTT, it's back to normal.
It only happens on channel 18. How can I fix this?
Btw, the roof is about 20 feet up.
Any help is appreciated.

>
>- Gary KB0QGE

Your safe as long as you get that General written out of thew way within the year. You won't need to need to retake the 13 word per code test to upgrade to the Advanced. There is a problem when you get that advanced ticket though. You will start to covet that little bit of space that the extras have, and the bragging right that follow. Then you'll see that 20 wpm barrier in your way and code when then become an obsession in your life again.
My advice would be to continue with the code now, even if you have no use for it, just to get to the extra as quickly as possible. It will be harder to do later. You are a roll now. Congrats on the 13 wpm. Take the written as soon as possible. You find that HF is great. As nice as VHF can be, your first contact with a ham in some obscure part of the world is a kick you will remeber the rest of your life.

: I'm afraid that's not the answer. Many of these "zoological creatures"
: of which you speak are Extras with many years tenure in the amateur
: service. They have had ample opportunity to learn better ways of
: operating than they exhibit. It's not that they are unaware of good
: amateur practice, it is that they deliberately flout it. So a test
: of the sort you suggest would be of no value.

: For the vast majority of amateurs, peer pressure and good example
: have served well to establish good operating behaviors. For the
: few "zoological creatures" to which much reference is made, these
: tools have failed. Only strong enforcement action will correct
: this situation.

My casual listening on 20 makes me think that the situation has
improved from some years ago, when the service nets were driven off
14.313 MHz by intentional abusive interference. It took a long time
to get enforcement action in a handful of cases, but it seems to
have been effective against a much larger group than the few who
were penalized. We do need the FCC to do enforcement. Maybe
there will be a change in the political climate this fall that
will filter through to a regulatory agency like FCC.

If it does, I certainly hope it hits the way Gary advocates,
and not in silly petty actions against occasional slips of the
tongue. I agree with everything Gary Coffman says about this
matter.

Jim,

You've said it well. Your post describes what amateur radio is about to many of us. I guess after 37 years licensed (since age 15), I may qualify as an old Phart as well.

Just yesterday, I experienced one of the peripheral joys of the HF aspect of the hobby. I spent time in the back of my 2 acre lot erecting an end support for what is going to become a 160 meter inverted-L addition to one of my two Hygain hytowers. It was one of those beautiful, 72 degree Colorado October afternoons. Next weekend, once I have the materials, the antenna modification will be installed.

Then will come the time at the rig operating 160 to see what the band is like these days. While I have been licensed for 37 years, I have only occasionally operated the band, and with pretty lousy antennas. So, I look forward to yet another "new" HF operating experience.

One of the things that has kept me in the hobby all these years has been the continuing evolution of technology and applications to the hobby. There is always something new to experiment with... be it a new contest to operated, a different antenna to try, or a new mode - such as packet - to experiment with. There is always something to be challenged by.

And, not least is the friendships that have been formed. Later on this morning, I will make my weekly schedule with the fellow who elmered me into the hobby when we were both in high school. Also there - if he's not too busy fishing - will be the guy who helped me fix my first Heathkit so it would work when I was just trying to get my noice station on the air. I have known this fellow now for probably 42 years. We are the closest of friends, although we live 300 miles apart and see each other at most 1 or 2 times per year. Yet, the friendship has remained close because of amateur radio.

Enough sentiment, but I hope that those new to the hobby will give the HF bands a try.... in my opinion, that is where the longterm interest in the hobby will spring from.

73,

Ron - W0OSK (for a while longer, anyway)

Well, uh, I don't think so...next is gate 3 for advanced class...not yet
announced (that I'm aware of) and then gate 4 for all others, I believe.

Of course you have the right to vote for whomever you wish, but do you really think that is really smart? I am sure you are a very intelligent person. Voting for someone just because they are challenging the incumbent, well that could be dangerous....

> We NEED to vote out ALL incumbents and continue to do so in EVERY

> way around and that politics as usual is no longer acceptable.
> Once again Bill, I do not understand your reasoning here. If you have a bad apple in your area, why dump the whole barrel. You have folks who work very hard for the radio service, and who are deserving of election and or re-election. Sounds to me like throwing the baby out with the bath water.

> 73, Bill Wells - WA8HSU - ARRL Member # 1233411
> wa8hsu@netusa1.net

Bill, I am sorry, but I do think you are a bit mistaken. I ran for Section Manager in the San Diego Section section against the incumbent, did not win this time, but it has not discouraged me. I was on the ballot. You mentioned that the League found some rule or something that precluded him from being on the ballot, maybe I missed what it was. Did you mention what the rule was. It is very simple, at least for Section manager.... you must have a petition with at least 10 league members, and file it on time. That should be it....

Maybe there was a slight descrepancy in this procedure. As one who has been a part of this process, I do not feel it is a sham..

That reflector will only accept incoming traffic for the
same address that it sends your outgoing traffic. For
example, if you subscribed from "this.address@here.com"
then you must also send your traffic to the reflector from
that address. If you send from "that.address@there.com"
it will be rejected because it "doesn't know you".

From: hbcsc274@huey.csun.edu (jerry wang)
Subject: Help: RFI with TV

I just installed a 2-meter 5/8 wave vertical mag mount antenna on top of
the air conditioner on the roof. My radio is a Radio Shack HTX 212
mobile used as a base station. Whenever I transmit on any 2 meter
frequency, channel 18 goes out
on all of my tv's. The tv's are hooked up to cable, and not antennas.
My neighbor's who also has cable has channel 18 go out when I transmit as
well. My minimum transmit power is 10 watts on the HTX 212.
Even at low power, channel 18 goes out with a bunch of snow on the
screen. As soon as I let go of the PTT, it's back to normal.
It only happens on channel 18. How can I fix this?
Btw, the roof is about 20 feet up.
Any help is appreciated.

I carry a photocopy of my license in my wallet. The original is
laminated and stays at home 99.9% of the time along with my station

license (The 5x7), GROL, etc...

So spend the ten cents and get those copies.

Tony

Subject: Vanity Call Delay.

I just read the ARRL Bulletin regarding a possible 4 to 5 week
delay in processing Day-1 applications due to lack of personnel
to do data entry... Hmmmmm? I bet I can find, oh say, 4500 people
who would enter at least one each for free! =)

I'll drive.

Subject: ARRL Elections a Sham, AGAIN!

Gentlemen:

I just received my ballot in the biannual exercise in futility known as
the ARRL elections.

Here in the Central Division we were again offered no alternative in the
"race" for Division Director. The only name on the ballot was that of

the incumbent. This is not because other candidates did not present themselves, though!

There was at least one other candidate that I know of who had the required number of signatures on a petition who outwardly, at least, fulfilled all the requirements to run in the election. But, since his politics did not pass muster, the headquarters staff found some arcane rule which barred his running in the election.

Because of this, for Central Division Director I voted "NO" and would urge everybody else out there to do likewise.

At least for Central Division Vice-director there was a choice presented. I voted for the challenger, not because I know him to be a great guy or well qualified but because he is the challenger.

We NEED to vote out ALL incumbents and continue to do so in EVERY election until these guys all know that they serve us and not the other way around and that politics as usual is no longer acceptable.

Would you please state the plain facts. Your editorial slant without the facts tells me only that you have some unspecified grudge, but not what it is.

What was the rule that tripped your friend, why do you say that it is arcane and in what way did your friend fail to comply with that rule?

Are you really now proposing that the headquarters staff should comply with some of the rules but not others, and does your friend feel that same way? If he does, then I and perhaps many more members will be relieved that his nomination was disqualified.

>
>- Gary KB0QGE

Your safe as long as you get that General written out of thew way within
the year. You won't need to need to retake the 13 word per code test to
upgrade to the Advanced. There is a problem when you get that advanced
ticket though. You will start to covet that little bit of space that the
extras have, and the bragging right that follow. Then you'll see that 20
wpm barrier in your way and code when then become an obsession in your life
again.
My advice would be to continue with the code now, even if you have no use
for it, just to get to the extra as quickly as possible. It will be harder
to do later. You are a roll now. Congrats on the 13 wpm. Take the written
as soon as possible. You find that HF is great. As nice as VHF can be, your
first contact with a ham in some obscure part of the world is a kick you
will remeber the rest of your life.

Jim,

You've said it well. Your post describes what amateur radio is about to
many of us. I guess after 37 years licensed (since age 15), I may
qualify as an old Phart as well.

Just yesterday, I experienced one of the peripheral joys of the HF
aspect of the hobby. I spent time in the back of my 2 acre lot erecting
an end support for what is going to become a 160 meter inverted-L
addition to one of my two Hygain hytowers. It was one of those

beautiful, 72 degree Colorado October afternoons. Next weekend, once I have the materials, the antenna modification will be installed.

Then will come the time at the rig operating 160 to see what the band is like these days. While I have been licensed for 37 years, I have only occasionally operated the band, and with pretty lousy antennas. So, I look forward to yet another "new" HF operating experience.

One of the things that has kept me in the hobby all these years has been the continuing evolution of technology and applications to the hobby. There is always something new to experiment with... be it a new contest to operated, a different antenna to try, or a new mode - such as packet - to experiment with. There is always something to be challenged by.

And, not least is the friendships that have been formed. Later on this morning, I will make my weekly schedule with the fellow who elmered me into the hobby when we were both in high school. Also there - if he's not too busy fishing - will be the guy who helped me fix my first Heathkit so it would work when I was just trying to get my noice station on the air. I have known this fellow now for probably 42 years. We are the closest of friends, although we live 300 miles apart and see each other at most 1 or 2 times per year. Yet, the friendship has remained close because of amateur radio.

Enough sentiment, but I hope that those new to the hobby will give the HF bands a try.... in my opinion, that is where the longterm interest in the hobby will spring from.

73,

Ron - W0OSK (for a while longer, anyway)

Carl doesn't want people to respect his views. He wants to merely impose them on you whether you want them or not. His anti-social behaviour is a clear indicator of his true intentions.

One of the ham radio magazines in the United States called "73 Magazine"
carried an article on Sealand about 10 years ago. This article included
pictures and a history of the "country". I haven't heard anything about it
since then.

If you can find someone with a library of back issues of "73", perhaps
you can look it up. I'd say the issue was between 1983 and 1987.
Maybe someone in the amateur newsgroups (I'm crossposting this to a couple
of likely sources) knows the exact issue.

Be honest yourself, Carl: Tell us once and for all what class license you hold; you always say "I've passed a code test" & "I've got HF privileges", but not once do I recall you stating what your license class is. Don't be ashamed.

If you want others to be honest, you too have to be honest and play fair (such as following the newsgroup's charter and keeping the code debate on .policy).

Let's see: 4500 on the first day, at $30 a pop = $135,000.
Figure the average governmental key-puncher in Gettysburg makes under $30,000 a year - the *FIRST DAY* of gate 2 should pay the salary of 4 new employees for the next 365 days.

Let us be generous and give them 2 minutes to enter each application **very carefully** - this means the 4 employees should do 960 applications in an 8 hour work day. This means that all of the 4500 +/- applications received on 9/23 should have been completed no later than Monday 9/30.

Seems to me, there are not enough people entering forms, or they are trying their damnest to convince me that all government workers are lazy non-productive slags (which they are not).

Mind you- my 4 employee estimate assumes a full year's employment, when they could certainly justify getting some temp clericals for 2 months- lets say $15 an hour to be really generous - assuming 40 hour work weeks, 8 weeks total - this would afford 28 employees.

Seems to me our $30 isn't buying much in the way of "administrative burden support."

Oh well- at least the basic license in the US is still free (for now at least......)

Well, uh, I don't think so...next is gate 3 for advanced class...not yet
announced (that I'm aware of) and then gate 4 for all others, I believe.

: I'm afraid that's not the answer. Many of these "zoological creatures"
: of which you speak are Extras with many years tenure in the amateur
: service. They have had ample opportunity to learn better ways of
: operating than they exhibit. It's not that they are unaware of good
: amateur practice, it is that they deliberately flout it. So a test
: of the sort you suggest would be of no value.

: For the vast majority of amateurs, peer pressure and good example
: have served well to establish good operating behaviors. For the

: few "zoological creatures" to which much reference is made, these
: tools have failed. Only strong enforcement action will correct
: this situation.

My casual listening on 20 makes me think that the situation has improved from some years ago, when the service nets were driven off 14.313 MHz by intentional abusive interference. It took a long time to get enforcement action in a handful of cases, but it seems to have been effective against a much larger group than the few who were penalized. We do need the FCC to do enforcement. Maybe there will be a change in the political climate this fall that will filter through to a regulatory agency like FCC.

If it does, I certainly hope it hits the way Gary advocates, and not in silly petty actions against occasional slips of the tongue. I agree with everything Gary Coffman says about this matter.

Did you have a table at the Hosstraders/Rochester, NH flea market this past weekend (Oct. 4 and 5)?

I'm looking for someone who was there selling a Ms. Pac Man PCB and the Midway schematics manual. He was also selling milage counters for bikes and walkers.

I know this isn't really amateur radio related, but since it WAS a ham-radio flea market, this might be the place I can find that person.

If, by chance, you are that person, or know who that person was, PLEASE respond via e-mail to smooth@acs.bu.edu. It's important. Thanks a lot!

Joe
smooth@acs.bu.edu

4499. ICOM radios lose their minds? (backup battery issue)

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-06 00:00:00 UTC
From: richw@yank.kitchener.on.ca
Message-ID: <19961006195129.richw@yank.kitchener.on.ca>
Source record: 215369

I have an ICOM IC-R71A receiver which I bought sometime in the mid-80's.

I vaguely recall reading on the net, some years ago, that there was a problem with some (all?) ICOM equipment because if the backup battery inside the unit failed, the operating parameters would all be lost and could only be restored by sending the unit back to ICOM for repair.

Is this true? Is it a general problem affecting all ICOM radios, or just some models? In particular, is this a problem with the IC-R71A? Is it feasible for the equipment owner to replace the battery without sending the radio to ICOM?

For what it may be worth, my IC-R71A has been working fine so far.

>I would like other peoples thoughts on this.
>Thanks

It is "allowed" because usenet is still a free speech anarchy. There are no censors who rule on the content of a posting before allowing it to be distributed. For the most part, this is a very good thing, but it has a cost, and that cost is the occasional fast buck artist's posting. Fortunately, unlike solicitation phone calls, you don't have to read this stuff. You can just hit whatever key your reader uses for next message and ignore it.

If you feel that you really must be policeman for the net, these pyramid schemes are illegal activities, and you can forward them to the proper authorities for prosecution. If they solicit cash via US mail, as most do, then the proper authority is the postal inspector because this is considered mail fraud. Just send them the money that they request, then file a complaint with the post office that you've been taken. If you do this for every one of these postings, a lot of people will wind up in jail. You may wind up in the poor house, but hey, no one said a policeman's lot was easy.

Just write a letter to the FCC explaining the circumstances of the
loss and they will send you a replacement license. They see this
every day, it's no big deal, and no charge.

I will suggest that you should keep your original license in a safe
place and only carry a photocopy in the future. That'll avoid the
necessity to write the FCC if this happens again. Or if you run
your wallet through the washer, as I once did. :-(

>Since the most early days of the hobby, the thrill of THE CONTACT
>has been the lure of HF; certainly not quantity nor "quality" of data,
>other than the essentials to be sure a real contact had occured. This
>was also true for Marconi, Tesla and Hertz--did he hear me, and I DID
>hear him and responded.

Actually, Marconi only cared about the fact of the contact *once*
to demonstrate to his backers that transoceanic contacts were
possible. Once he established that, he concentrated on increasing
throughput to make it a commercially viable service. Tesla too
concentrated on making *use* of his signals once he determined
that they existed, using them in 1895 to radio control a model
ship for example.

Early amateurs also concentrated on the practical *use* of their
equipment, with the American Radio *Relay* League formed to convey
messages further than a single amateur could manage to send. Early
amateur literature is full of exhortations to amateurs to improve the
speed and accuracy, IE *throughput*, of their stations so as to more
efficiently serve the purpose of message relay.

The radio pioneers weren't playing a game, they saw *application*
of radio waves as their direct goal. The game playing didn't come
until much later, long after the practicality of contact had been
proved feasible, and had in fact been made a commercial reality
by others.

Hertz was the exception to this in that he wasn't interested in
using radio waves. His interest was in exploring their properties.
His was a "pure" science interest of the mid-Victorian sort.

>That is the entire point of the QRP branch of the HF hobby: can I make
>the contact! That is all that is looked for, nearly exclusively on the
>very difficult to operate 160 meter band!! Can I hear anyone tonight,
>and if I do, can I make a contact with him/her? That is the fun of

>160 meter hamming.

To an extent, I can admire the QRP operator. He is, like Hertz,
exploring the limits of the properties of the Hertzian wave.
But mostly he is handicapping himself in the presence of Gaussian
noise by failing to use techniques that allow contacts at lower
signal levels, and/or with greater throughput. If the QRP operator
were really doing scientific enquiry like Hertz, he would be
trying to push the limits of more than just the power level at
which CW could be heard by ear. (A few QRP operators are doing
just that, but they're called Lowfers and not radio amateurs.)

>Contesting -- the bane to many on contest weekends, but on those

>they made more contacts to more places than anyone else on the
>planet during those 48 hours; it causes there adrenalin to flow
>greatly for all those hours, and creates a great high!!

Contesting, like racing, was once touted as a method to "improve
the breed", and in fact it may have once done so. But just as
racing has ceased to be an important source of innovation due
to formula and class restrictions, so too has amateur contesting
ceased to be a method of improving the breed. It has become pure
sport, a game with no real purpose other than entertainment. It
is now no different from golf or tennis, except that at least
in golf and tennis some worthwhile physical exercise is gained
in the process of the competition.

>Someone posted the opinion that the Old Farts were just interested in

>visitors, if they happen to give a hoot about my hobby!

I'm sure stamp collectors feel the same way about their collections.
They can regale their bored visitors with tales of stalking the

wily double print stamp through auctions, and the furious "action"
of the bidding to get it, just as you can the collection of your
cards. Unfortunately, their collections serve about the same purpose
as well, that is as decorative displays.

>Secondarily, the HF bands are a meeting place for old friends, and
>a casual, very casual, conversation with a stranger, who just might
>become a new friend. These occur on both SSB and CW modes every
>day, and night.

It certainly can, and is one of the purposes of amateur radio,
but with CW you can't say much of interest. Thus the friendships
are tenuous at best. How much can you really learn about another
person at only a few words per minute? I'd suggest not very much.
That often becomes painfully obvious when at last there is a face
to face meeting. More than mere physical appearance comes as a shock.
You often quickly discover you really don't know much about the
person at all.

>So until the HF band amateur discovers another way to really have
>lots of fun, they way it has been since the beginning of amateur radio.
>I suspect they will continue having fun the old way. RTTY has been
>gaining in popularity the last several years, not because of a great
>data rate, which it isn't, but it does allow a lot of contacts with a lot
>of people, all over the world, especially on RTTY contest weekends.

While it is true that RTTY has unfortunately been discovered by the
gamers, there is still plenty of conversation occurring between RTTY
operators. 60 WPM may still be a low data rate, but it is worlds better
than that typical for CW contacts. And, of course, many operators have
moved beyond RTTY to better techniques. In fact, RTTY activity is
declining, and PACTOR has now become the dominant digital method in
use on HF. (That'll likely be supplanted by PACTOR II and/or Clover
in the near future since either is clearly superior.)

>Might say RTTY has been discovered as another way to really
>have some fun on HF. Of course it grew out of an earlier brach of

>
>So, most of the arguments being posted on these reflectors are not
>that meaningful to todays really active HF band amateur. He is already
>having a lot of fun, the old way.

I don't think anyone is suggesting amateurs aren't having fun using
the old ways. There are many sources of fun. Some, like spraying
gang graffiti on walls, is anti-social, and some, like assisting
in a neighborhood beautification project, is not anti-social, but

it is all fun. No one participating is getting paid in any other coin. I would suggest, however, that it is better to derive fun and satisfaction from more progressive and useful activities than it is to rehash old exploits over and over again. Just how many times must DXCC be accomplished before it is accepted by everyone as a done deal?

>Notice, I have said nothing about technical training, emergency service,

>at me until he got my attention!!
>
>For reasons known only to the God of propogation, my signal was
>the ONLY signal he could find with his on-ship gear!

That could be due in part to the relatively low numbers of amateurs on HF at the time, and also to, as you note, the lack of frequency agility of his equipment, or more likely to his lack of knowledge of propagation. I'd note parenthetically that the signals of the ham station at the medical school on Grenada blanketed much of the southeast during the invasion, and that the stations of Mexican amateurs reached much of the southwest and southeast during the earthquake there. That wasn't apparent, however, until stations in those areas starting listening for those signals.

If there's a lesson to be drawn from this, it is that large numbers of stations listening for the signals of stations in distress may be beneficial. But this has long been known by the maritime and aeronautical services. You suggest that failed in this case, and that may be true (or it may be that the operator in distress wasn't skilled enough to select an appropriate watch frequency). In any event, amateurs aren't strong on passive listening, so for amateurs the lesson may be to get and keep high activity by many geographically dispersed stations so that should an unskilled operator in distress call there would be someone present to hear the call.

> We were in QSO from here on Kauai

>is also a part of the spirit of HF band hamming. High speed data gear,

>spread spectrum, etc., would have been useless in the emergency
>situation above. And talk about the HIGH experienced by yours truly
>as a result of that encounter!

Indeed, and I would note parenthetically that CW skills would also
have proved useless in that situation (and are growing less useful
by the minute due changes in maritime communications regulations).
For the unskilled and ill equipped operator in distress, plain old
voice communications still have an important role.

But if the operator in distress had possessed digital or SS equipment,
you would have been unable to assist. It is a two way street. Digital
comms have proven useful in a number of recent emergencies, witness the
invasion of Kuwait story recently chronicled in QST for an HF example,
or any of a number of occasions when packet has been used to assist in
disaster communications after earthquakes, fires, floods, etc, and
that trend is very likely to grow.

From the perspective from which we currently stand, if we look
backward, we see an increasing reliance on AM, CW, or spark as
we go further back in time, but if we look forward, we see an
increasing reliance on SSB, modern digital text methods of a
number of -TOR sorts, SS, ALE, etc as the techniques of the future.
In which direction should we prepare, for the past, or for the
future? Are amateurs to serve as a reservoir of antique technics,
or are we to be in the forefront of communications technology as
we were until recent times?

There's fun to be found in either direction, but I know which
way I want amateur radio to go, and that isn't to yet another
rehash of past triumphs. Note well that I'm not suggesting that
we *ban* older methods. I am suggesting that we place an increased
emphasis on newer technics and less on older methods, both in
licensing and in our on-air activities. As the twig is bent,
so grows the tree, and I want our newer operators to be inclined
toward the future rather than toward the past.

>
>Zero meters?
>
>KH2PZ

Justify.

I'll admit that the answer seems intuitively compelling. As you approach the limit of zero wavelength, any antenna of finite physical size becomes larger and larger in terms of wavelength. And we know in general that as an antenna becomes larger in terms of wavelength its gain increases. For most antenna forms, however, there is a point of diminishing returns. Long wires, Vee beams, yagis, etc, can actually become so large in terms of wavelength that their gain decreases, IE sidelobes begin to dominate. And that often doesn't require many wavelengths in size before that occurs.

A perfect parabolic reflector would seem to be an exception to this rule of diminishing returns, but even it has a feed, and that feed is usually of a form with a point of diminishing returns. More importantly, the beam formed can't be smaller than the diameter of the dish, which is finite and therefore can't have infinite gain. An antenna of infinite gain must generate a beam of zero diameter. And an antenna of zero dimension is by definition an isotropic point and has, again by definition, zero gain. Therefore I'm compelled to suggest that an antenna of infinite gain can't exist at a wavelength of zero meters, that point represents a discontinuity of the gain function.

It should also be obvious why an antenna operating at a longer wavelength than zero can't have infinite gain. That's because the photons generated have greater than zero dimension (or in classical terms, the wave energy is spread through the transverse E and H fields over a finite distance proportional to wavelength), thus the point of focus must be larger than zero, and thus have less than infinite power density. So we must assert that an antenna of infinite gain is impossible, even in theory, regardless of wavelength chosen.

Hi for all.

As I finished my mission in Ethiopia the QSL route in Addis Ababa
isn't in use any more.

The new route is:

Dragan Stojanovic
Dusana Vukasovica 82/20
11070 Novi Beograd
YUGOSLAVIA

Till now I have exchanged about 4.000 QSL's out of 14.000 QSO's.

73's

Dragan - ET3YU

Well, the system *is* first in, first out, but the firsts are *days*.
That's because the mail is delivered daily in batches, not one letter
at a time all day long.

It would be impossible to determine which letter in a large bag of letters
delivered by the postal authorities (or private equivalents) is "first"
and which is "last" except by some arbitrary selection method. Since
the incoming mail is inevitably delivered in a batch, and that's outside
FCC control, they have to use some arbitrary method to select which has
first priority. A random lottery among each day's receipts seems the
fairest method.

It would be just as much a lottery if they took the first letter at
the top of a mail bag first and the letter at the bottom of the mail
bag last. The relative positions of the letters in the bag would be
no less random. But since the truck delivering the mail no doubt
had many bags, entering them all in the computer first is more fair
than processing them bag at a time since that inevitably favors
those in the bag first opened (which is likely to have been the
last bag loaded on the truck, think about it).

Do you have a better suggestion for prioritizing the letters in
a bag, or group of bags, all delivered at the same time?

Email would sort the entries in time order one by one, but that
order wouldn't necessarily be the order in which they were sent.
I still get Email that was sent days ago thanks to the vagaries
of internet routing and the workings of POP servers. And I seriously
doubt that the FCC's web presence is up to handling 4,500 near

simultaneous logins.

The only feasible alternative I can see would have been to disallow mail entries altogether and require amateurs to queue up individually in person outside the door to hand deliver their requuests one at a time. That would favor amateurs local to the area, of course, and couldn't be considered fair either in a national system.

Gary

4510. Spread Spectrum on the HF Ham Bands

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-06 00:00:00 UTC
From: Jim Reid <jreid@aloha.net>
Message-ID: <01bbb3e0$07e4c520$LocalHost@jim-reid-1>
Source record: 215380
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Spread Spectrum modulation techniques have been suggested
as the solution to band crowding. Also the technique is said to
be an excellent weak signal, dense signal environment
mode for amateurs.

Well there are problems not being considered by those proponents
of this technology. As Carl, and perhaps others have noted,
there are restrictions about modulation techniques for the
HF amateur bands. Why?

Not because of technology problems; but because of so called
"National Interests". What?

Recall the QPSK modulated radio I mentioned a few days ago.
About 25 years ago this radio was developed to allow the direct
microwave transmission of the new Bell System T1 TDM/PCM
carrier. This innovation of the Bell Labs would allow many more
POTS (plain old telephone signals) on a pair of twisted copper
wires than was poosible with the existing FDM technique, which
was then being used to modulate FM microwave radios for
transmission across large distances at lower cost than wire
trunks.

A radio was developed which could accept more than one T1
circuit and squirt it all out on a single 2gHz band beam. The
transmitted signal was a type of spread spectrum sort when
viewed with a spectrum analyzer. It further developed that two
such radios could simultaneosly use the same frequency if the
beams were cross polarized at the microwave antenna: this
meant a whole lot of POTS channels all together in the same
spectrum space at the same time. This was a great commercial
development, was dutifully and excitedly written up per the proper
format, and all submitted off with much data to the FCC for the
anticipated Type Acceptance so marketing and the revolution of
the phone system could begin!

But some weeks later, back came the package, disapproved!!??
Why? It worked beautifully well.

The FCC routes these Type Acceptance documents off to other
government agencies for a chop, identity is not important here.
But the problem, as explained to us was that the signals could
not be decoded by a casual observoer. A who?? To demodulate,
and understand the POTS information was the problem. An
interceptor of the signal must have apriori knowledge of the QPSK

scheme in order to copy the information content. It seems
it is in the national interest of the United States, at times, to be
able to do this, even to telephone common carrier traffic, a la
court approved "wire tapping", but in this case tapping in and
demodulating the microwave signals!! So certain things were
modified, the unnamed government agencies were satisfied,
and Type Acciptance was, at last, given.

Amateur signals have characteristics of interest to a sovereign
nation beyond the parameters we usually consider. Our HF
signals can be detected, that is they are not somehow hidden,
for example below the thermal noise level of the ktB sort plus
system noise; they are open for anyone to receive, demodulate
and understand the information being transmitted (amateurs
are prohibited from transmitting covertly or to convey commercial,
paid for, traffic, for example), therefore the FCC still maintains
monitoring stations, among other things, for example, to assure
the common carrier tariffed operators that amateurs are not
carrying commercial traffic. So the FCC sees to it that no
amateur band signal is transmitted which is non-detectable
nor non-decipheralbe/demodulatable (if that is a word). And,
it is in the national interest, at times, to be able to deny the
transmission of signals carrying information. So amateur band
signals are all of a sort that are easily detectable by present
US government monitoring equipment, and could, if needed,
be denied (jammed).

For these reasons alone, the possibility that any amateur band
transmission at HF will ever be sanctioned which could operate
below the noise level, simultaneously with many others of the
same sort, using spread spectrum techniques which allow them
to be separately detected and individually demodulated (which
does require apriori knowledge about unique and individual
transmission parameters by both transmitter and recipient) will
NEVER be allowed in the U S of A ! Each such signal must
have a unique parameter other wise it could not be separated,
detected and decoded from among the other simultaneous
spread spectrum signals. Technology is not the problem,
but because it might become detrimental to the sovereign
interest. Further, such spread spectrum signals at HF,
as being proposed, could not be separately and individually
selected for denial to a particular recipient by jamming;
all signals in the spectral region would also be jammed,
or more nicely, denied.

We will surely be getting along fine with RTTY (and others
of the sort), CW and SSB for years to come on the HF
amateur radio bands. All are easily detected and copied
by those agencies with sufficient interest to do so. Even the
so called "closed" HF packet signals going off to bulletin
boards, etc.

We will continue to do the sorts of things HF amateurs have enjoyed doing for decades; but with much more sophisticated digital techniques of signal processing as some others have discussed recently here on the newsgroups.

Just some more thoughts on another rather warm Sunday afternoon an hour or so befor the first Great Debate!

>jerry - ke6uux

Well, Jerry, cable ch 18 *is* the 2m band, so filters won't help.
All you can do is tighten up the cable system so there's no signal
ingress, and make sure your signal only egresses your coax at the
antenna, IE use good quality coax and a choke balun if that seems
appropriate to keep the outside of the coax "cold".

It sounds like there's a *serious* leak in the cable TV system
nearby. Sniff around 145.18 MHz and see if you hear anything.
If you do, it's probably cable signal leaking out. Any time
cable signal can leak *out*, amateur signals can leak *in*.

Likely causes are illegal cable taps, or a break in the cable
trunk shielding. Call the cable company. They're required to
fix this sort of leakage.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 273
BID: $OPDX.273
October 7, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1VV, WU1F, W5IJU & Island News, W7TSQ, WA8JOC, K0DEQ, KI0W, I4UFH, LU6EF, PA3GBQ, PT2NP, PS7AB and SM0BFJ following DX information.

3B9, RODRIGUES ISLANDS. Jon, EA2KL, and Luis, EA3ELM, are making plans to be active from Rodriguez Island, possibly October 31st to November 5th. If everything receives an OK from the Ministery of Communications in in Mauritius (3B8), they plan to be active on 80-10 meters including the WARC bands. Operations will be on CW, SSB and RTTY. The QSL information was not provided at this time.

8P, BARBADOS. Jack/K3KG, Steve/(callsign not provide), John/N6YRU and Vic/KI6IM will be active as 8P9Z as a Multi/Single effort in the CQWW SSB Contest, October 26-27th.

9G, GHANA. Steve, PA3GBQ, reports he will once again spend his holiday in Ghana. He will be there in time to participate in the ARRL CW Contest (and possibily the SSB one also). His callsign will be 9G5BQ, and he has some plans to operate from on top of a mountain with nothing between USA and antenna than air. He has not yet decided what category to run (Single Op/ Multi or Single Band). Steve states he will also try to get a license for 160 meter this year (This is not allowed with a 9G5 callsign.).

A3, TONGA. Bob, W7TSQ, will be active as A35SQ from October 16-28th. His operation will include participation in the CQWW Contest. His plans are to operate all bands except perhaps 160. On his arrival, Bob will be helping Paul (KK6H), A35RK, install new antennas. By the way (BTW), Bob, is the QSL Manager for Paul. QSLs for A35SQ and A35RK go ONLY to W7TSQ with NO to A3 bureau active.

HEARD AND WORKED ON RS-12. This week Joel, WU1F (from FN42 - MA), reports EI4CL, 9Y4VU, F5RRS, EA3AHE and EI7CC were active. He also

reports RS-15 is now working Mode K (15 up and 10 down).

IG9, LAMPEDUSA ISLAND (ITALY). Fabio, I4UFH, reports after good results in the 1995 CQWW Phone Contest (IG9W), a team will once again be active from IOTA AF-019 for the 1996 CQWW Phone Contest effort. Operations will be from October 20-27th. This year they will cover all the 6 band, as a Single Band/Single Op effort. Look for the following (callsign - and band): IG9/IV3TAN - 160 meters, IG9/I4UFH - 80, IG9/IT9GSF - 40, IG9/IK2QEI - 20, IG9/IT9EQO - 15 and IG9/IT9GEZ - 10. There will be a little activity before the Contest to tune-up the equipment. QSLs will be handled by IV3TAN.

KH8, AMERICAN SAMOA. Members of the Yamata ARS will be active this week from Ofu Island starting October 9-11th. Look for operators JA1JQY, JA1KJW, JR1LVB, JA3MCA, JA8VE, JA0KNM, JD1BIK and 7L3MNH to sign homecall/KH8. Operations will be CW, SSB and satellites with activity on 80-10 meters. QSL to CBA.

ON THE ROAD AGAIN (or should we say sea!). Ron, ZL1AMO, is once again and currently active from Fiji as 3D2RW. Activity is mainly on CW, 80, 40 and 15 meters. He was heard also on SSB operating around 3796-3799 kHz at 1145z. On October 2nd, Ron stated he would be leaving for T2 (Tuvalu) soon and would be active as T28RW. QSL via ZL1AMO.

QSL NEWS AND UPDATES......
Whitey, K1VV, states he is "NOT" the QSL Manger for EP2EXX. He has been receiving DX QSLs every day for EP2EXX and doesn't know how he got listed as his manager.

The ABRA-DX Brazilian Association has informed OPDX that the first QSLs for the DXpedition from Coroa Vermelha Island (last January, ZW6C and ZX6C) were sent out. They would like to thank all those who made a contact with them, and those for being patient on waiting for the cards. They state the cards are worth the wait.

CY0AA QSLs. Ken, WA8JOC, reports the final proof was OK'd on Monday, September 30th, and WJ2O should be printing them within the next several days. They hope to have the cards within 1-2 weeks at the QSL Manager's QTH. They already have the labels printed for all cards received direct, with the exception of "NOT IN LOG", or band QSO problems. "98% are ready to go!", states Ken. The QSL will be a bifold, 2 faced QSL, and it will be well worth the wait for all. Finally, Ken states, "... Thank you for your patience, and financial support which has continued. The almost 16000 QSOs we made from CY0AA, made many many hams very happy for an all time "NEW ONE", we've been told countless times in the QSL envelopes. We're glad we were able to do it for you. On behalf of Mike/VE9AA, Wayne/K8LEE, and myself... Good DX and 73! KEN, WA8JOC"

The LU6Z GACW Manager, Raul, LU6EF, reports that 1850 direct QSLs have been answered, with some cards going out through the bureau. They also report that about 15 to 20% of the mail sent to them have

had the envelopes opened and resealed. They also believe some cards did not make it because the envelopes were stolen for the green stamps and IRCs. Raul states answering the cards is a slow process because it is a "ONE MAN-HANDMADE AFFAIR". An announcement will be made to let everyone know when all the cards have been answered so that individuals can send a second request if they did not receive their cards. ADDED NOTE: Sending cards to LU-land today is a big problem. They recommend NOT to send green stamps, but IRCs instead. DO NOT PUT callsigns on the envelopes and they suggest to send mail to: Box 9, 1875 Wilde, Baires, Argentina, ONLY.

Leif, SM0BFJ, (QSL Manager for Gus, 9Q5TE, 9X/SM5DIC, 5X1D) reports that on December 31, 1996, he will close the log and QSL for 9Q5TE for the period August 1989 - April 1992.

ZV0, MARTIM VAZ ISLAND. Just a reminder that Stuckert/PT2GTI, Paul/PT2NP and Lunkes/PT2HF from the ABRA-DX Brazilian Association will be active this week. The team was to be active as of October 7th, but because of a delay, look for them on October 8th (Stay tuned on the SSB IOTA frequencies and 5/10 kHz from the low edge bands on CW). The team will be taking a helicopter trip from Trindade to Martim Vaz Island, which is a big rock of about 130 meters high over Atlantic Ocean. It will be the first operation in the history of that island and the first time that somebody inhabited it. This will be a short operation only lasting two days. Look for the callsigns: ZV0MB for SSB and ZV0MV for CW. QSL only via PT2GTI (OK in CBA). Cards can be sent either directly or via the bureau. Their land coordinator, Ari, PT2BW, will assist them on the Brazil DX Net (14240 kHz, 0900z).

ZK3, TOKELAU. The "Island News" reports Yvette, F3YA, is active for the next three years as ZK3YA. With operation limited to six hours per day due to power restrictions, look for Yvette on 7003 kHz between 1000-1100z. QSL via home callsign.

Folks,

I have been getting some e-mail concerning my From: and
the Reply To: address, which you will see in my posting header.

This is to foil the SpamBots. These are programs that
read newsgroups and collect e-mail addresses from posters. Those
addresses are processed into mailing lists for unsolicited
commercial advertisement by e-mail, called "Spam". You also see
Spam direct to the newsgroups, like chain letters, etc., but the
one of concern is the e-mail Spam.

The last issue or two of PC-type magazines have carried the
news that at least TWO major ad agencies collecting addresses and will
be making major advertising campaigns via e-mail Spam.

I am already getting some.

The main concern, besides being a pain in the arse, is that
it is done on your nickel. Newsgroup posts exist in one copy per
newsgroup, but e-mail is one copy per recipient. Thus, if your ISP
has 1,000 customers, it will receive and store 1,000 e-mail
messages.

Most of these SpamBots are so designed that the e-mail so
sent has each message slightly different from the others, so that
the automatic cancellers cannot catch them.

So, as my signature file explains, you can reply to my
newsgroup posts to the n.g. with no problems, but if you wish to
reach me by e-mail, you must address it by hand instead of pushing
the Reply:Mail button on your Netscape etc. This is a very slight
inconvenience to you, for which I apologize.

All Internet addresses are typed one way, but spelled
phonetically another way. Many people jumped into the Internet
by buying Netscape or Explorer and never learned the Internet
customs and etiquette. There are standard phonetics for Internet
addresses, just as for radio via the ICAO phonetic alphabet.

Thus: joe@host.somewhere.com
Becomes: joe.at.host.dot.somewhere.dot.com

I think this is self-explanatory. However, a complication for us
Netscape users is that Netscape requires the inclusion of the "@"
symbol in there somewhere, or it bombs the mail/posts. When you

go to Options-->Mail and News Preferences-->Identity you should enter your address in the form:

joe.at.host.dot.somewhere.dot.com@no.spam

This will get by Netscape and it might be obvious to someone. It mostly is not obvious, so my signature file explains it. I refer you folks to the alt.2600.* newsgroups and the comp.os.cpm and comp.os.linux.* newsgroups which are starting to collect e-mail spam.

It is a pity Netscape does not allow the Mail and News preferences as to identity to be set separately because e-mail is private and cannot be trolled by the SpamBots, just the newsgroups.

I strongly suggest that you folks follow suit, as the lists are being compiled NOW.

Carl, I have to agree with Todd's statement. In an engineering world, or a commercial communications world, specially with specific frequency assignments or discrete communications channels, your method would be correct.

However, ham radio does not fit the mold this way. This is a hobby, for enjoyment. Thus, for us hams, its QSO's per Hz or per band, that is the measure of efficiency. Specially as we all want real-time QSO's (packet notwithstanding).

This IS true, but it appears that the lithium batteries are lasting considerably longer than expected. I have both Icom IC-735 and IC-R71A that are well over 5 years old and the radios continue to perform without problems.

I just put the IC-R71A back in the main station and (earlier today) had looked up an article from QST, July, '94, that described a device from Willco Electronics for the IC-R71A, IC-751A and IC-745. It replaces the battery back-up board with a new board that will not "lose its mind" when the lithium battery eventually fails. The board (ICM-1024) also provides for up 1024 memory channels (vs. 32) and extends the frequency coverage from 100 Khz - 30 Mhz to 10 Khz - 32 Mhz. When the review was published, the board sold for $150. It is user-installed.

I took down the address and will write to confirm current prices and specs, but believe they are still in business. I don't know if I would spend the money before the radio dies, but it's nice to know there is an option to sending the rig back to Icom when (if) the original battery fails.

Wonder if anyone out there has purchased this board and what they think of it?

Willco's address is: P.O. Box 788, New Lenox, IL 60451.

73,

Bill, WA9NHQ

Hi Gary,
I am the one that started the Zoological classification. Your message attribute is not quite correct....! I am guilty of "snipping" too much from time to time too!

You are right, things are better on 14,313 than they used to be, or on 3995 since the K1MAN fiasco.

By the way, in days when I should have known better, I sent K1MAN a 51S1 Collins receiver for repairs, he quoted me $300 to fix, and then refused to send it back when I thought it was too much.

Anyone know where I can get a hold of this joker now? I am older and wiser, but in those days, before the FCC action, K1MAN was respectable....then turned radical....then even took my radio!

You are right about peer pressure and example. But a lot of the fellows starting out do not really have an elmer, but simply study from a book. I was one of those, as my 'elmer' was a phone man, and I was not particularly interested in phone. But, I did have good books, including the ARRL license manual, the novice manual, and the Boy Scouts books.

This is why a few questions on those things would at least force the applicant to have read some text and prepare for those questions.

Q. What is the correct phraseology used in acknowleging correct reception of a transmission?

1. "Ten-Four, good buddy."
2. "Message received and understood."
3. "Roger."
4. "Roger, Wilco."

as an example of one such questions. More, surely, can be devised.

Some Kenwoods do the same thing. I have a TH-75A which occasionally goes batty on me by showing some erratic display and not being able to transmit, although this is sometimes alleviated by just simply re-entering the memory channel or turning the radio off and then turning it back on a few seconds later.

If neither of the above work, then the only other option left is to reset the CPU (if the radio doesn't do it for you).

FWIW..... :-)

Another possibility is that the RFI is getting into a nearby TV set
and backfeeding into the cable. The cable company is not required
to fix this (although they could pull the service from the person
backfeeding the interference). But Gary is right, by and large,
one way or the other the cable company *has* to fix it. This was
the subject of a rulemaking some years ago, and the cable companies
can have heavy fines for failing to accomodate a licensed user.

Otherwise, follow Gary's advice.

Gary, this was a good post. I have to comment that entertainment and
"rag chewing" is an important part of ham radio, and always was.
In the 1917 days, the Navy had temporary control of the radio waves,
and they did not want to release them back to a bunch of kids just
ragchewing on the air! Sir Hiram Percy Maxim, W1AW used the argument
that hams did more than that, including traffic, relaying, experimen-
ting, etc. And hams DID discover the usefulness of short waves.

If we were only allowed to transmit in order to fill a certain particular purpose, like a propagation study, at the exclusion of rag chewing, it would not be ham radio but an experimental service, for which the FCC provides reasonably easy to get licenses.

All modes, and all purposes have their time and place. But I think the most basic one of all is ragchewing. Even dyed in the wool experimenters do it. They establish contact, for the first time, over 500 miles at 10 GHz and what do they do...? Why ragchew, of course!

As technology evolves, we have to move the hobby forward, or like you like to say, "lean it towards the future". Of course, as you say, in no way should we do something that would eliminate the enjoyment others have using older or current modes.

This is why I favor no-code testing, but continue with written tests to guarantee commitment in part of the prospective ham...and to continue the allotment of CW sub bands, even if they get reduced in size from time to time as conditions warrant. This from someone who is an Extra and a CW man to boot! Good thing this is not in the days of Salem or I might be in for a hot time!

> politics did not pass muster, the headquarters staff found some arcane
> rule which barred his running in the election.

Bill -- this message to the newsgroup and e-mail copy to you as well.

I do not think there is need for secrecy. I do not really believe
that the ARRL would actually do that, but the present situation is
volatile enough that anything is possible....may even probable!

What we need are some FACTS so we can take action.

1. Who the fellow running that did not appear on the ballot was.
2. What date did he mail his nomination in, and when did the ARRL
receive it? (I assume he sent it by FedEx or certified mail
return receipt requested. If he did not, then I think the matter
will come to an end there).
3. Give the names of at least 10 hams who signed the petition and
were voting ARRL members.
4. Provide us with the answer ARRL gave your candidate friend as to
why he was not on the ballot. If the explanation was public,
you can reprint the ARRL letter here on the newsgroup. If not,
copyright law will prevent you from doing so, but it is okay to
recapitulate the content in your own words and have brief quotes.

Also, as a member since 1959, I have seen quite a few elections get
"tossed" because of irregularities. Mistakes do occurr. If the
application went in, and the ARRL never acknowledged it, but he HAS
a copy of it, and the FedEx or Mail receipts, then be assured that
the ARRL will hold a new election. Not doing so is against Federal
rules, even for a private organization.

The fact that a member running for the board has views opposite that of the policy established by the present board, is PRECISELY the reason people run for office....and precisely the reason the law is crafted to allow such people to run.

Simply complaining about it will not do. Let us have the FACTS so we can take action!

Also, blindly voting for the challenger is not a good idea. The person you vote out might be the one that expresses your own views. I think you should either read the information ARRL mailed with the ballot, which is a statement written by each candidate himself; or even e-mail or phone the guy and ask him pointed questions about his views. The candidate may or may not agree with you, but at least you know where he stands and you can vote intelligently and where it counts.

>distributors" already sell all the radios they can to Amateur Radio Stores.

Usually all of the Amateur Radio Stores purchase directly from the manufacturer
no distributors have been involved. You might get some two stepers who can not
make the required annual purchase minimums from the manufacturer. Generally
other Amateur radio stores will do some two stepping to these retailers.

Hello and thanks for reading this.

I am looking for a MC 4016 count down decade counter chip,
I know they are old, but I only need one.

If anyone knows where I can order one or just has one , let me
know via the newsgroup or email: grandall@phase2net.com

Thanks
Gary

4536. Cluster-logbook interface on internet?

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-07 00:00:00 UTC
From: "Andrew J. O'Brien" <andyo@wca-hospital.com>
Message-ID: <32593842.5209@wca-hospital.com>
Source record: 215256
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc

It's been a couple of years since I was actively DXing , I used to use my DXbase logging software which monitored the 2M DX cluster for spots and alerted me to needed stations.

Now I see that I can telnet to the clusters, but does the state of the art allow clusters accessed via the Internet to be monitored by my logging software (any logging software) ????

4537. send no money

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-07 00:00:00 UTC
From: Jeff <jdlemast@mail.netusa1.net>
Message-ID: <3259CD94.1450@mail.netusa1.net>
Source record: 215257

The procedure is simple:

1) Write your name and address on 5 sheets of paper.
Below that, write the words, "Please add me to your
mailing list." Fold a $1 bill in each piece of paper
and mail them to the following 5 addresses:

1. H. McAllister
9543 East 500 North
Kokomo, In 46901

2. Daniel Sutherland
20 Greenville Drv, Grovedale,
Geelong, VIC 3216

3. Thomas Andersson
Ringvagen 43
Stockholm
SWEDEN

4. Per Hellberg
Poste Restante
34220 Alvesta
SWEDEN

5. J. Shoffner
711 South 300 West
Kokomo, In
46902

2) Now remove the top name from the list, and move the other
four names up. In other words, #5 becomes #4 and so on.
Put your name as the fifth one on the list. Use a simple
text editor such as Notepad, in your "accessories" window
(If you have MS-Windows), or DOS editor. In fact, any
editor will do.

3) Post the article to at least 200 newsgroups. There are
17,000, so it shouldn't be hard to find 200. Try posting
to as many newsgroups as you can, and the bigger the
newsgroup is, the more people are to see your message!

You are now in the mail order investment business, and
should start seeing returns within a week or two. Of course,
the more newsgroups you post to, the greater your return is.
If you wish to remain anonymous, you may use a psuedonym,
call yourself "The Manager","The Boss", whatever, but make

sure your address is correct.

Now, here is why the system works:

- Of every 200 posts I made, I received 5 responses. Yes, only 5. You make $5 for every 200 posts with your name at #5.

- Each person who sent you $1 now also makes 200 additional postings with your name at #4, i.e. 1,000 postings. On average, therefore, 50 people will send you $1 with your name at #4. Average return with 50 people = $50.

- Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people = $500.

- They make 200 postings each with your name at #2, which is 100,000 postings. Average return is 5,000 at $1 each = $5,000.

- Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $50,000 before your name drops off the list, AND THAT IS IF EVERYONE DOWN THE LINE MAKES 200 POSTINGS! Total avg. income in one cycle = $55,555.

From time to time, when you see your name no longer on the list, you take the latest posting that appears in the newsgroups, and send out another $5, and put your name at #5, and start posting again. Remember, 200 postings is only a guideline. The more you post, the greater the return.

THE ONLY COST IS $5, AND 5 STAMPS, 5 ENVELOPES and 5 PIECES OF PAPER. Anyone can afford $5 for such an effortless investment which produces such SPECTACULAR RETURNS.

There are millions of internet users, and millions of new net surfers every month! This is the great advantage of the Internet. People all over the world can hear you and listen carefully if you talk reasonably. Many will take that chance! I agree. If it wasn't the Internet, and it was a small circle of people, the return would be rather small. It would not succeed.

But here on the Internet, it is a giant village, where thousands of new members join in every day! The amount of money returned to you is 200 times larger because the group is 200 time larger, i.e 200 postings, and the risk is zero. You CAN'T lose!

Remember, read the instructions carefully, and play fairly. That's the only way this will work. Get a printout so you can refer back to this article easily. Try to keep a list of everyone that sends you money and always keep an eye on the postings to make sure everyone is playing fairly. You know where your name should be.

REMEMBER - HONESTY IS THE BEST POLICY. YOU DO NOT NEED TO CHEAT WITH THIS IDEA TO MAKE MONEY! BESIDES, NOT PLAYING THE GAME FAIRLY IS ILLEGAL. SO LET'S BE REASONABLE AND PLAY FAIRLY, SO WE CAN ALL ENJOY THE INTERNET GOLD MINE.

GOOD LUCK TO ALL OF YOU, and remember, play fair and you'll be a winner. Come on and finally get those things you've wanted for a long time!!!

4538. FCC Issuing Vanity Calls?

I think that the newsgroup has been the victim of a hoax. Look at the foregoing letter, particularly the "typos". Sometimes the typing is letter perfect, then it lapses into something that is barely legible. Look at the spelling of the names in the signature. Most typists, no matter how bad, will not misspell their own names (twice!)

KC0WX is indeed Ken Bessler according to the callsign server. Howeve, I did a finger on kg0wx@feist.com, and it shows that he has never logged in.

Does anybody know this guy well enough to verify the story? If it's true, forgive me for being a cynic, but I have seen more than my share of spam!

BTW, many years ago, I used to install telephones, and I fell off of a few phone poles, but that didn't stop me from enjoying ham radio :-)

Sorry, Henry, the Mario Andretti analogy doesn't fit. A better comparison would be if the President of Andretti Auto Sales tried to run on the board of Consumer's Union (the Consumer's Report folks, who reviews include automobiles.)

The sale may have been completed by the time of the election. The check is in the mail :-) Rules is rules. Sorry you missed out this time, but there's always another election in another two years.

Well, it is only true for a small number of Icom models. The IC735
is *not* one of them. Its programming is safely in ROM. The IC-745
and IC-751 are the amateur transceivers affected. You can change the
battery in the field *before* it dies and save a trip back to Icom
for reprogramming. You have to be a bit careful to insure power is
always on the memory while you do the change, but it isn't that hard
to do. If you do lose the memory, it isn't necessary to ship the
whole radio back to Icom, just the memory board will do.

>
> 73, Jim KH2D

I mean that it is unfortunate that there is no mode safe from
the plague of gamers. I've spoken before about foreign amateurs
who have been all but driven from the bands by gamers. A number
have retreated to the digital modes as a way to have conversations
in relative peace. But they are no longer free of the hounding
by the card collectors even on digital modes. I consider that
unfortunate.

Most of us living in "non-Dx" countries are little bothered by
the gamer. If we don't want to play the game, we don't have
to. There aren't hordes of gamers waiting for our call sign
to appear on a Dxcluster spot. Pileups don't occur every time
we get on the air. But the amateur in a "Dx" country doesn't
have that luxury. Just because of where he lives, he has no
option in the matter. The plague descends on him when he
tries to operate whether he wants to play the game or not.

Now he can announce that he does not wish to play the game,
and that sometimes disperses the mob, but he has to do that
over and over again every time he gets on the air because
a new crop of gamers discover him. And refusing to play the
game makes him look like a bad guy. Most people don't want
to appear to be a bad guy. So they either play the game or
go off the air. That's why most of the foreign "Dx" amateurs
you hear play the game, the ones who didn't want to play
are off the air. That's unfair.

The digital modes have served as sort of a refuge for some
of these people because digital operating hasn't been very
popular with the gaming crowd. It is unfortunate for these
foreign operators if that is changing.

I don't expect you to understand this. You're a gamer, so
the game is all consuming. As another poster noted, it's
what amateur radio is about. Well, all I'm saying is that
the game is *not* what amateur radio is about to everyone.
And they have a right to be allowed to operate in peace
just as much as anyone else. Digital operating has allowed
some of them to do that for a while.

Whatever happened to that novel idea of Personal Responsibility? Although I am truly sorry for your misfortune, I have found that in my life, I have always been either directly or indirectly responsible for each of my "accidents"... Every person plots his/her own course in life...

Should we ban cars because of drunks? How about matches because of fires, or pools because of drownings? I think not.

Perhaps all Burt follow-ups could start with a "B:" in the title.
Then all those not interested could easily avoid them. Perhaps you already
are filtering your news or mail from Burt, but this could help with the
follow-ups. They'd all be immediately recognizable when your newsreader sorts
by title. This technique is used in certain other newgroups that suffer from
annoying or non-newsgroup related posts.

Maybe we should put this in the FAQ! ;-))

>in ssb for all modes.

Efficiency is part of the reason, but linearity is another part. In my
AL-1200, the plate idling current is 75 ma in the SSB mode, but only 25 ma in
CW. When driven to the same output, the CW mode is more efficient, but the
SSB mode is more linear. Personally, I leave it in the SSB mode all the time
because linearity is good for CW too... it reduces the tendency to generate
key clicks.

If you have not visited Ham Radio Online in a while, stop on by. We keep adding new features and new stories all the time. We've just added a new ham radio photo gallery, made updates to the humor and newsletter sections and updated the library. Plus of course, new stories are added all the time. We've got many new stories in preparation, some mini-product reviews, and some ideas for new features you won't find anywhere else on the Net. We've even been sketching some ideas for a hilarious cartoon strip about ham radio and techie topics (but it will probably be a while before we have time to get this feature added!).

Stop on by and pay us a visit at http://www.hamradio-online.com

More ham radio fun than anywhere else. Now read in 46 countries around the world!

People are crabbing about how long it will take the
FCC to process vanity callsign applications. They
suggest the FCC should use the collected funds for
processing. They lament at the delay.

What delay?

You didn't figure that 5 or 6,000 additional applications might
cause them a delay? Anyone want to admit to being
surprised?

Why should the FCC needlessly waste their operating funds
on overtime? I would hate to see them waste their money
in that fashion. I would hate to see their employees be
forced into overtime on a project that is so easy for the
applicants to realize the effects of their requests.

THANK YOU FCC FOR MAKING THIS POSSIBLE.
Take your time. Perhaps then we will not be as big of a
burden when issues press that are a heck of a lot more
important than some dopey ham radio operator's vanity!

I sure will be glad when I dump "N" "ZERO" "EIGHT" "M"!

Hello, Folks:

On October 13, 1996 the Eastern Ozarks Amateur Radio Club (EOARC) will sponsor a Fox Hunt in St. Francois County Missouri.

Sign up will be from 1300-1330 at the Mineral Area College parking lot in Park Hills (formerly Flat River) and the Hunt itself will start at 1400.

Entry is _FREE_ but you must register!!

Maps of St. Francois County will be provided.

The Fox will live on 2m FM simplex and the exact frequency will be announced by the Fox at 1400. The Fox will be somewhere in St. Francois County.

Certificates and ribbons will be awarded.

From St. Louis, take Interstate 55 south to US highway 67 south to the Leadington/Park Hills exit then turn left.

From Cape Girardeau, take Interstate 55 north to US Highway 67 south as above.

From Poplar Bluff, take US Highway 67 north to exit as above and turn right.

You may call on the EOARC repeater on 147.030 (+600) for talk-in.

All Amateurs are welcome and encouraged to attend!

Take Care & 73

Well, when I started this thread, it was pretty ambiguous as to how the whole thing is being managed (Mellon or the FCC). Looks like after seeing the delay post, that it's still pretty much up in the air. Did anybody ever see/read anything about a 'lottery' before the gate opened? Once they cashed checks, that should have been the price of a lottery ticket. Not this selective malarkey that's going on.

a back lite microphone..especially useful when dtmf'g at night

display that shows when lite by durect sunlight

something that can be remote mounted...most cars don't have
the spare to mount a whole unit up front

a microphone that allows some remote functions...changing between
memory and VFO possibly power levels, etc

built in ctcss decoding..encoding would be nice, but not necessary

if you can, try for the dual band. it's usually not that much more.

good luck have fun

URL: http://www.novia.net/~pschleck/elmers/

-----BEGIN PGP SIGNED MESSAGE-----

Amateur Radio: Elmers List Info and Administrivia

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

[Special Note: Greater Omaha Public Access Unix has been acquired by Novia Internetworking as of September 1, 1996. Novia will assume ownership of the gonix.com domain and intends to keep it active (aliased to novia.net) for the foreseeable future. This means that you may use either the new novia.net addresses, listed below, or the old gonix.com addresses for the Amateur Radio Elmers Resource Directory. I'd like to thank the administrators of Gonix for their outstanding support of this resource over the years, and look forward to a fruitful relationship with Novia Internetworking for some time to come.]

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line

documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM."

As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

As part of the Elmers List's entry into the World-Wide Web, I've also provided a formatted WWW Registration Form. It may be accessed from:

http://www.novia.net/~pschleck/elmers/register.html

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 5 or 6:

1. World-Wide Web (WWW): This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:
+ http://www.novia.net/~pschleck/elmers/
+
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
+ http://www.cs.ruu.nl/cgi-bin/faqwais *
(Note: Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)
see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)
2. Usenet News: This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:
+ news:rec.radio.amateur.misc
+ news:rec.radio.info
+ news:rec.answers
+ news:news.answers
on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

3. Anonymous FTP: If your site is directly connected to the Internet,
you may retrieve the latest copy via File Transfer Protocol (FTP)
from the following sites:
+ ftp://ftp.novia.net/customers/pschleck/elmers/
+ ftp://ftp.cs.buffalo.edu/pub/ham-radio/
+
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elm
ers/
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/
4. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:
+ gopher://jupiter.sun.csd.unb.ca/
+ gopher://gopher.univ-lyon1.fr/
+ gopher://ftp.win.tue.nl/
+ gopher://gopher.win.tue.nl/
see also news:comp.infosystems.gopher
5. Mailing-List: Since the list is cross-posted to rec.radio.info,
the latest copy may be obtained from the mailing-list gateway for
that newsgroup (along with many other informational articles about
radio) when it is published each month. To subscribe, send E-mail
to:
listserv@ucsd.edu
and in the BODY (not the Subject) of the message, write:

subscribe radio-info
The server may not be able to determine your return address. In
that case write:

subscribe radio-info (your E-mail address)
You should get an acknowledgement very shortly.
6. Mail-Server: If you don't want to read through the entire gateway
of rec.radio.info, or want a copy of the list right away, send
E-mail to:
ftpmail@ftp.novia.net
and in the BODY (not the Subject) of the message, write:

open
get /customers/pschleck/elmers/admin
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/diff

Alternatively, send E-mail to:
mail-server@rtfm.mit.edu
and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index/subject

```
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/diff
```

and the latest copy of the list should be sent to you E-mail
within 24 hours (the mail-server uses batch priority to reduce
system demand).

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

Amateur Radio: Elmers List Subject Quick-Search Index

(Note: This index is not necessarily all-inclusive and some Elmers are
listed more than once.)

10-X INTERNATIONAL

* Cebik (Mailing List and WWW Page)

AMATEUR RADIO EMERGENCY SERVICE (ARES)/RADIO AMATEUR CIVIL EMERGENCY SERVICE
(RACES)/SKYWARN

* Adams, I (ARES and SKYWARN)
* Ammar
* Ayers (RACES and SKYWARN)
* Boccardi (ARES/RACES/SKYWARN)
* Boudda (Morocco)
* Butler
* Chilton (EMA Radio Officer)
* Glago (Sonoma Valley, CA ARES and RACES Director)
* Gray (Arkansas Section)
* Humphries (ex-Asst. EC)
* Ihry (ARES/RACES/SKYWARN)
* Knauer (ARES and SKYWARN, including National SKYWARN WWW Page)
* Kruml (Northeast King County, WA ARES EC, EComm Pacific Northwest
ARES Internet Mailing List)
* Lao (Philippines)
* Miller (Ventura County, CA ARES Area 6 Packet Radio Training Group
and WWW Page)
* Mills (SKYWARN)
* Moell, A (Hospital Disaster Support Communications System and WWW
Page)
* Morgan (ARES and SKYWARN)
* Morris (ARES)
* Neeson
* Neff
* Paperman

* Schliesser (SKYWARN)
* Schwartz (NYC EC for Operations)
* Shelton, P
* Smith (ARES and SKYWARN)
* Stader (EMAS SEC)

AMATEUR SATELLITE CORPORATION (AMSAT)

* Boudda (Morocco)
* Galazka
* Johnson, C
* Lee (Korea)
* Roth (Portland, OR Area Coordinator)
* Williamson, P (WWW Page, Anonymous FTP Archive, and Mailing Lists)

AMATEUR TELEPRINTER OVER RADIO (AMTOR)/PACKET TELEPRINTER OVER RADIO (PACTOR)/RADIO TELETYPE (RTTY)

* Bernstein
* Butler
* Leavey (73 Magazine RTTY Loop Column and WWW Page)
* Neeson
* Reynolds (FSK, PSK, MSK, Various Types of ARQ and FEC Systems)
* Sayer (also decoding CHU's ASCII time code)
* Sussman (Publisher of PACTOR News WWW Page, Speaker and Host of PACTOR Forum at Dayton Hamvention)

AMERICA ON-LINE

* Ruh (ATV Quarterly Representative, Ham Radio Manufacturers and Dealers Section)
* Stader (Host and Manager, Ham Radio Club Forum)

AMERICAN RADIO RELAY LEAGUE (ARRL)

* Bauer (W1AW Manager and Chief Operator, ARRL Bulletin Mailing List)
* Bloom (QEX Editor, ARRL CNC Contact)
* Cebik (Educational Advisor)
* Cira (Los Angeles, CA ACC)
* Ehrlich (EMAS Internetworking ASM)
* Elmore (CO TC)
* Goldstein (Volunteer Counsel - Florida Only)
* Halle (Phoenix, AZ Area Official Observer Coordinator)
* Hare (Laboratory Manager)
* Hill (TN TS)
* Jahnke (VEC Manager)
* Kruml (Northeast King County, WA EC)
* Lau (Technical Consultant)
* Newkirk (Webmaster, HQ WWW Page)
* Redding, T (Educational Advisor)
* Sefranek (EMAS TA)
* Sohl (NJ Local Govt. Liason)

* Stader (EMAS ASM and DEC)
* Tracy (InfoServer Sysop, TIS Coordinator)
* Turner (Volunteer Counsel)

AMIGA PERSONAL COMPUTER

* Leadmon (Amiga NOS FTP Archive)
* Morris
* Salnick
* Whatton (Manager, Amiga Amateur Radio User Group and WWW Page)

ANTENNAS

* Anthony
* Ayers
* Brewer (wire HF)
* Brubaker (HF)
* Butler
* Cebik
* Chahine
* Cieslak, C
* Coyle (multi-band wire HF)
* DePolo (Design/Theory)
* Elmore
* Galazka
* Graham (wire HF for apartments)
* Gray
* Halbert (simple designs)

Amateur Radio: Elmers Resource Directory

More information about this list can be found in the companion posting
to this file, "Amateur Radio: Elmers List Info and Administrivia."

73, Paul, KD3FU

- A -

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.ucsd.edu/hamradio/amprnets

]

Chuck Adams K5FO

adams@sgi.com

Maintainer of Standardized Info Sheets on QRP Rigs

They are available from the QRP-L WWW Pages at:

* http://qrp.cc.nd.edu/QRP-L/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

Owner of QRP-L Mailing List

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign,
if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

Edward Addy KE0EG

eaddy@nacec.org

Executive Director, North American Center for Emergency Communications

After a large disaster strikes your community and your family, I am
sure you will agree that its a little late to start building a massive
rapid response, emergency communications system supported by thousands
of people within companies, organizations and serving as volunteers to
provide essential support services.

We are the North American Center For Emergency Communications Inc.
(NACEC), a federally-registered non-profit organization serving North
America since 1992. We have been developing a system that merges many
different technologies to create a unique, high-capacity,
rapidly-deployable solution to the problem of communications outages
and shortages that occur following a large disaster. Our volunteer
network in using the Internet as its communications backbone, is
itself using one of the many technologies employed in NACEC's overall
solution.

To help ensure the greatest possible effectiveness in as many
communities as possible throughout North America, we are developing a
very large volunteer network of community volunteers (Community

Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.nacec.org/

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to my E-mail address above.

* ham-tech (Untamed technical discussions about the hobby)
* fox-list (Fox hunting (Radio direction finding))
* arrl-exam-list (amateur radio license examinations scheduled in
the US and in some foreign areas.)
* arrl-ve-list (ARRL VE Announcements, run by ARRL VEC Bart Jahnke)
* arrl-nediv-list (Announcements from the director of the ARRL NE
division)

To join any or all of the above:

Send a message to:

majordomo@netcom.com

In the body of the message, type:

subscribe list_you_want

Since there appears to be no hope that Netcom will ever improve its
mailing list services, w1aw-list has been moved to a server down at
ARRL headquarters. See Jeff Bauer's entry for more information if you
wish to continue to receive W1AW bulletins.

There is no need to unsubscribe from the Netcom list. I'll take care
of that myself.

Thanks again for your support and patience with my w1aw-list over the
years. Note that this change will not affect any of the other
ham-radio related lists at Netcom.

425 DX NEWS Weekly Bulletin WWW PAGE (NEW SITE!!!)

- ------->> http://promet12.cineca.it/htdx/index.html <<---------

NEWS, INFO, RUMORS, DXPEDITIONS, IOTA ACTIVITIES and more

DX CALENDAR, WABA AWARD (rules & scores) now available

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in
love with RS sats and DOVE telemetry. I'm the Shortwave Listening
(SWL) coordinator of the Italian Amateur Radio Association and I have
a regular SWL page in their official magazine Radio Rivista. Recently
I joined the 425 gang that produces the 425 DX News bulletin. I
translate it into English and send it to many DXers via E-Mail. I also
maintain a WWW page to provide the bulletins graphically with previous
numbers and more to come. I've been an SWL since 1974 when I received
a receiver as gift from my parents. Now I'm 36 and I'm running also a
free BBS devoted to HAM/SWL.

Author of the following MS-DOS ham programs:

* AutoExam - Examination simulator and study aid
* AutoCW - Morse Code practice program
* DOSGATE - allows users to run programs on your PC remotely
(AutoExam compatible)
* AutoCall - Allows use of the Buckmaster HAMCALL CDROM online
callbook with DOSGATE
* AutoFax - Allows reception of weather fax using Kantronics TNC's
* SeeSats - Real time satellite tracking (text only), DOSGATE
compatible

Most of these programs are available via anonymous FTP from:

* ftp://oak.oakland.edu/SimTel/msdos/hamradio/
* ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

* A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5"
or 5.25").
* A Self Addressed STAMPED return diskette mailer.
* A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[Editor's Note: Fixes have recently been made to the FTP software at this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all

possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

Barry Buelow WA0RJT

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tuscon Amateur Packet Radio (TAPR) Bulletin Board Special Interest Group (BBSSIG) is sponsoring a working group to generate and distribute a series of information bulletins which will serve to instruct packet radio users in a variety of areas. These bulletins will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

Rusty Carruth N7IKQ

Rusty Carruth aka N7IKQ aka rusty@indirect.com (NIC: RC541)

The Phoenix Linux User's group has formed! Details: me.
Join the Usenet Un-Net: 1700-1900Z Saturdays, 28.410 or 28.390 MHz

I'm willing to act as a reference for anyone wanting info on getting tapes (especially Callsign tapes) from the Department of Commerce National Technical Information Service (NTIS) or wanting other info on callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise, really!

My job is currently System Administrator for a large Unix site so I know a little bit about day-to-day Unix operations and Unix installation :-) I also have much experience with constructing E-mail paths that will work rather than bounce.

I also have a fair amount of experience in hardware/software interfacing and machine control.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm

claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(The GRAPES WWW Home Page is moving to its own dedicated machine at a new ISP. This will give GRAPES direct T1 access to the Internet. It will provide comprehensive GRAPES information, support, and online ordering facilities. I'm told this will all be up and running in a few weeks. Bruce Nebergeld and Dennis Barrow, both former GRAPES presidents and net wizards, are spearheading this effort.)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

Relayer of Amateur Radio Newsline Bulletins

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Network. The transcribed version is produced by Dale Cary, WD0AKO from materials provided by Newsline, and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in its entirety, not be subject to any further editing or commentary, and that full credit be given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in its entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in its full form over voice or digital forms of Amateur Radio, it is recommended that the closed circuit advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to

Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com

Earth-Moon-Earth (EME) and Weak Signal World-Wide Web Page:

http://www.webcom.com/af9y/

(I'm not able to do much elmering beyond answering the questions generated by my Web page. You can certainly E-mail me for further information about EME, but with the 30+ E-mail messages received a day, my responses will be limited.)

William (Bill) Coyle N3OGH

wcoyle@iss.dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

Michael Crick

mica@crick.com

Bellevue, WA

http://crick.com/mica/

I design and write software. I have written a top of the line Ham Radio training program for Windows called "Ham University". You can download a free demo copy from my web site.

I also helped write Microsoft Windows. I am not a ham operator but more of a web nut (I was part of the group at BBN that developed the ARPANET back in 1967). However, in designing Ham University, I got a lot of expert advice. I think it will meet many people's training needs.

mattd@branson.org -- send here first, please!
mdaless@ocf.berkeley.edu

I cannot claim to be an expert in any field, but I did participate in SAREX as the project coordinator for our school (The Branson School) in the STS-64 mission. I will be happy to help anybody else who is interested in any and all aspects of the SAREX project. I also know a little bit about UNIX administration, but I find myself asking questions more often than answering them.

I am a high school senior, so my real area of expertise is getting young people involved in ham radio. I was a speaker at the Dayton HamVention Youth Forum, and am active in recruiting in my local community.

I've been an active Linux advocate since it first appeared on the
Internet. I was looking for an operating system that would better meet
the needs of my interest in Amateur Radio and provide me with an
environment in which I could actively experiment and develop. Linux
provides that and I've been promoting its use within Amateur Radio
ever since.

I'm an early contributing member of the Linux Documentation Project,
and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney University of Technology
Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

I am the US National Coordinator for RAIAR, Radio Amateurs International Awards Registry, we have over 78,000 registered members and just over 2,500 general members, plus lifers and charters also.

RAIAR only deals with the VHF/UHF spectrum for its awards, plus SWL on all bands.

I am ready to help any interested individual obtain his Novice or Tech ticket, as well as teach him the ins and outs of VHF Packet.

Our radio club holds classes for those inclined to advance to General and above.

76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory-management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation, and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms, and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you are most welcome to do so.

Eran Glago KD6KVO

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here,

as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

I co-maintain the Boston Amateur Radio Club anonymous FTP file
archives with Phil Temples, K9HI (phil@temples.com).

A sampling of the archives include:

A virtually complete archive of all ARRL bulletins since 1992 is available
at:

ftp://ftp.barc.org/pub/hamradio/barc/w1aw-list/

A mirror of all files available from the ARRL info server is also available:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserv/

The ARRL infoserver mirror has FCC Part 97 (U.S. Amateur Radio Service Rules
and Regulations) at:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserv/rib/part97.txt

Programs mentioned in QST are in:

ftp://ftp.barc.org/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too:

ftp://ftp.barc.org/pub/hamradio/docs/newsline/

Macintosh Amateur Radio Software Archive:

ftp://ftp.barc.org/pub/hamradio/mac/

Ham Radio and More, the radio show carried live every Sunday (6pm - 7pm EST)
on the Talk America Radio Network, now has a World-Wide Web home page:

http://www.barc.org/barc/ham-more/ham-more.html

Please direct any feedback, submissions, or administrivia regarding
these resources to my E-mail address above.

Ken Gunton WB6QWF

kenny@erinet.com

Microwave Components World-Wide Web Page:

http://www.erinet.com/kenny/microwave.html

It changes from time to time, so stop back often! Don't see the
component you want? Just call, fax your spec, or e-mail and attach
your drawing or spec for a quick quote at BIG savings.

My company, Techlock Distributing, sells RF and microwave components
of many different types. I own the company, and it's a small, one-man
operation. While I don't sell Ham equipment per se, I have sold some
dividers, etc. to hams for their use.

Raleigh, NC | "Powering Your Network with Intelligent Solutions"
- ---

I am especially interested in VHF/UHF and microwave amateur bands as well as Amateur television. I am treasurer and a founding member of the newly-formed Triangle Amateur Television Association in Raleigh-Durham- Chapel Hill, NC. I am willing to share my expertise in the following areas:

* ATV - Getting started, starting local activity, repeaters.
* VHF/UHF - Propagation, what you need to get started, operating
portable, contesting, weak signals, and DX.
* Sealed Lead Acid Batteries - How to take care of them.

Steve Harding KA6ETB

ka6etb@grafex.sbay.org +1 408 252-0578 alternate: harding@nas.nasa.gov
For amateur radio related information, send a message to:
ham-server@grafex.sbay.org
and put "HELP" and/or "GET /HAMRADIO/INDEX.TXT" in the body.

HAM-server is now on a 486 with nearly 70 MB of data. Besides DOS,
there are some UNIX, Mac, and OS/2 files.

Most files have been taken from the various ftp-servers world-wide.
However, there are many programs that have been donated by HAM-server
users.

Submissions welcome. Send to incoming@grafex.sbay.org.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results
are in September 1994 QST, including warranty and customer service
information for most automobile manufacturers (many of whom have
published installation guidelines).

I am also continuing to pursue more formal contacts and
standards-making through the EMR and EMI Standards Committee of the
Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn
allegedly has a video on mobile installation, but none of the dealers
seem to know about it. I have a call into one of my low friends in
high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Cheyenne Greatorex's entry for information about the ARRL Anonymous FTP Archive and David Newkirk's entry for information about the ARRL World-Wide Web Home Page.

Mobile Antenna Systems and Installation (Primarily HF)

* power distribution
* frame grounding
* antenna selection and construction
* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@ThePorch.com (*)
* rra-wg@ThePorch.com
* glowbugs@ThePorch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://www.qualcomm.com/people/pkarn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://www.qualcomm.com/people/pkarn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I

think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://www.qualcomm.com/people/pkarn/papers/mysscomments.html

(See also Steve Bible for more information on Spread Spectrum)

[Editor's Note: I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

Paul Keezer NX1P

logview@keez.tiac.net

Finally a WWW page has been set up for HamView products, a Windows based Ham Radio program. This page can now be located at:

http://www.tiac.net/users/pkeezer/hamview/

There is an upgrade file right now for Win95, but the bug has only been corrected in Logview 5.0. Come and check us out.

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing your way to hamdom, the cheapskate's approach, let me know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq:
80 meters --- 3702.5 kHz for all hands.
40 meters --- 7102.5 kHz alternate, for all hands
(between the heterodynes, someone scout out a better QRG)

Standard calling signal:
CWIST IMI DE <yourcall> K (if there are no control stations calling for you to check in), or, CWIST DE <yourcall> K (if there is a control station inviting checkins) (The alternative check in for those OTs with salt behind the ears is a simple DE to get the control station's ears followed by DE <yourcall> K when the control station acknowledges.)

Note:
A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note:
The midnight local time gathering is designed to maximize the number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition:
A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

Author of NA4G's National Electrical Code for Hams

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset quotations. Paraphrased excerpts from the Code are itemized. The author's interpretation and discussion of the Code is set full-width. The author's interpretation and discussion of various sections of the Code is not meant to be all-encompassing, nor the official interpretation of the National Fire Protection Association, nor of any official governing body having legal authority of jurisdiction over electrical installations, but is meant to be used as a teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one' both in tar-compress (862K, for Unix jocks) and PKZIP 2.04g (732K, for MS-DOS users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-build/na4g/

Robert A. Kile KG7D

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 602 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous ftp server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Luther M. Lord N4DA

n4da@mindspring.com

If you need a good place to get your amateur radio repaired, I can help. Visit the Radio Doctor's home page at:

http://www.mindspring.com/~n4da/top.html

I will answer all technical questions received via E-Mail at my address above. This service is offered presently at no charge.

Information about foreigners operating in Japan

- M -

Dean R. Madsen KE0WO

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State University
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called elmers@iastate.edu we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained

allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

Fred O. Maia W5YI

3511297@mcimail.com

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

Will Marchant KC6ROL

marchant@netcom.com

I'm one of the SAREX school group technical mentors. A group of about
nine of us are assigned by AMSAT/NASA/ARRL to make sure that the
schools selected for dedicated contacts on a SAREX flight are
prepared. I'd be happy to try handling E-mail from people interested
in SAREX.

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

Co-Host - Ham Radio and More

Ham Radio and More is available for free to any AM station that is willing to run it with national ads intact. If you want there to be a nationwide amateur radio talk show, call your local station and ask them to get the program. They don't have to be part of the Talk America network. They can call KFNN in Phoenix (+1 602 241-1510) or Talk America at +1 508 460-0588.

Effective 4/7/96: WWCR shortwave will air the show LIVE each Sunday at 6:00pm ET, (2200 UTC) on 7.435 MHz AND 12.160 MHz. Also, tape delayed at 5:00am ET (0900 UTC) Mondays on 3.315 MHz and Saturdays at noon ET (1600 UTC) on 12.160 MHz.

Call in and be part of the show. The toll free number is +1 800 293-5366 and outside the country at +1 602 230-2755. Fax at +1 602 241-1540.

See the entry for Cheyenne Greatorex for the Ham Radio and More World-Wide Web Page.

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an e-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

subscribe dx

David Newkirk WJ1Z

webmaster@arrl.org

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

Bob Nielsen W6SWE

Avid SW/MW DX'er for the last 30+ years

My main area of expertise is low-power (under 1 kW) Latin American Broadcasters, but I keep up-to-date on the current trends and events affecting broadcasters world-wide (i.e., I was recently asked about a station engineer who was working at ELBC in Monrovia, Liberia and was able to pass on information that the engineer was currently working in Gabon.) My other keen interest is Clandestine Broadcasters (not pirates).

Though intentional signal jamming isn't as much of a problem as it was during the "cold war," I co-authored a report titled "THE WOODPECKER PROJECT" which was presented at an ITU convention. I still use those skills now and then to DF CB'ers running illegal power, and your odd "bad-ham."

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not yet taken the time to catalog all this information (soon), but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00 US/page including US postage. I will quote on larger manuals. Note that I am not in the business of selling the manuals themselves.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

Other areas of expertise:

* ARES/RACES
* Novice/Tech Instruction
* RFI
* Volunteer Examiner Programs

Bruce Perens AB6YM

perens@hams.com

Maintainer of Linux for Hams CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30 US.

Free CDROM Subscription for Volunteers

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

info@hams.com

[Editor's Note: This project seems to be delayed as the result of schedule slippages with the Debian version of Linux. For more information about the status of the Debian Linux System, please contact David Engel at david@ods.com.]

PhD Candidate in Adult and Higher Education

Educational Advisor, American Radio Relay League

I am primarily an adult educator conducting research in self-directed learning. I have been involved in the following activities:

* Teach licensing classes, since 1974.
* Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy Club, Lawton Astronomy Club.
* Public speaking and publish on growth in volunteer organizations, marketing adult and higher education and teaching amateur radio courses.
* Research in adult learning theory, adult motivation and organizational theory.
* Conducted a SAREX activity that involve seven communities, 21 schools and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

Peter Reynolds KE4ABD

Peter Reynolds (KE4BAD) E-mail: reynolds@stc.nato.int
Voice: +31 70-314-2410 FAX: +31 70-314-2111
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague,
The Netherlands CompuServe: 100276,1340

I am very lucky in that I earn my living in radio communications, so
my expertise is fairly broad (but not focused on amateur techniques
only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over
the years. I always enjoy discussing and researching a communications
problem so if you don't see it listed above drop me a line anyway,
especially if you happen to be in Europe.

Bill Roth N7RYW

n7ryw@teleport.com

AMSAT-NA Life Member #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a
lot of the "Elmering" in this area as well as steering people toward

others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

John Rymell N3PFF

ryme@husky.bloomu.edu
Bloomsburg University
Bloomsburg, PA

Over 25 years in electronic/computer service work. Enjoy designing, building and operating vacuum tube and solid state equipment. Experienced in wire antenna and tuners, SWL, and Amateur Radio. Have real enthusiasm for building just about anything from next to nothing (:^)! Glad to help those in need.

I can help people with HF stuff, cheap antennas, and am willing to
help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

For hams that are interested and live in my area, they are welcome to
login to IBBS. IBBS is a full-time Unix-based computer that is
dedicated to ham radio. I carry a full rec.radio.* news feed and
E-mail. There will never be a fee for anything.

Over the past 10 years I have operated from 160 M - 23 CM and would be
willing to answer any question a new person to the hobby has. If I
don't know the answer, well, NASA is only two blocks away. :-) I live
and work here at Edwards Air Force Base, CA. I am also very active in
SAREX.

Dave Stine WA2JTA/6

dstine@cisco.com

My areas of expertise are:

* vacuum tube amps, receivers, exciters
* CW operating tips
* wire antenna tips, hints & kinks

David Stockton GM4ZNX

dstock@hpsqf.sqf.hp.com

* SWL since 1960
* Licensed since 1984 (UK full class A)
* Degrees in electronics&comms and digital techniques etc.
* Currently senior design engineer doing RF design
* Fairly broad interest in amateur radio (but not contests!)
* Antennas, Transmission lines,filters from fundamental theory to
practice
* Receiver structures and circuits from simple to state of the art.
* Transmitters, ATUs
* Test equipment
* Wide experience of troubleshooting/repairing equipment.
* Professional experience of EMC/RFI
* QRP
* UK Operation and Licensing
* My morse is flaky, but I keep working on it
* No interest in contests
* No interest in packet radio or in fixing computers

Just wrote the new oscillator and synthesiser chapter for the 1995
ARRL Handbook. Also co-developed (with G3ROO) a robust phase-locked
summing loop circuit to replace the common mixer-filter LO frequency
adder. A technical article describing the project was recently
published in RADCOM.

ARRL Technical Information Service Coordinator (tis@arrl.org)

ARRL E-Mail Information Server SysOp (info@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available

locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

HELP

Dr. Len Traubman (DDS) W6HJK

ltraubman@igc.apc.org

http://www.igc.org/traubman/

Russian Phrases for Amateur Radio:

http://www.igc.org/traubman/russian.htm

This 20-page syllabus was compiled during the Cold War by W6HJK to help amateurs better communicate with their Soviet colleagues. A 90-minute audio cassette has been added to help with pronunciation. You need not be an expert in Russian, only interested in "trying."

The booklet provides (1) English words and phrases for QSOs, accompanied by (2) the Russian translation and (3) the English transliteration, to assist you in pronouncing the Russian.

The syllabus follows the natural sequence of a QSO. There are additional sections on the Russian alphabet, phonetics, CW characters, numerals, and given women's and men's names. Suggestions are made for addressing mail to the former Soviet Union.

The author undertook this project out of a personal interest in improving the quality of his QSOs with Soviet hams and to enhance USA-USSR relations. A nominal cost of $6 US ($8 US international) for the

booklet, and $6 US ($8 US international) for the audio cassette, are payable to the Foundation for Global Community (formerly Beyond War), the original original sponsor of this educational endeavor to build global dialogue and cooperation.

Requests should be sent to:

FAX: +1 (415) 573-1217

[Editor's Note: It is my intention to keep the Elmers List as comprehensive and useful as possible, representing a broad spectrum of amateur radio activities. To that end, I have tried to make only very minimal content judgements, if at all. Though this organization seems to serve larger political and propaganda goals that I personally may not agree with, I think the amateur-radio-related content, and the useful product being offered, is redeeming enough to include here. As always, criticisms regarding any Elmer's entry may be directed to the Elmer him/herself.]

I would be happy to be an Elmer (have been doing it by default) in the area of older HF gear, especially QRP operation with Ten Tec Argonauts (and Power Mites, etc.). Also have experience with other 10-20 year-old economy HF rigs, particularly the Kenwood TS-520.

"Why don't you just make 10 louder?"
(Spinal Tap)
- ---

Having recently discovered the joys of Perl and CGI on the WWW, I
decided to get into the swing of it by coding a WWW page where one can
take practice Amateur Radio Exams. The page is now complete and has
all five examinations along with figures (including Extra).

The results are displayed question-by-question and then broken down by
subelement so that you can see which areas need extra study.

I am also saving the results from each examination taken so that one
can get some idea of the relative success rate for each Exam and
subelement. This may provide some interesting information as time goes
by.

The page can be found at:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

I _think_ it should all work as expected but I welcome any reports of
bugs and/or suggestions!

I hope this is of use to people interested in upgrading.

PS: If the page is slow, or not to your liking, try Ham Exam at:

http://w5ac.tamu.edu/ham-exam.html

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

Frank E. van Vliet PA3FAQ

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World-Wide Web Home Page, available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham license on or before January

1, 1970, you're now eligible). Included on the Web page are:

* Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
* Database of local Chapters (nearly 200, worldwide), including name, address, and callsign of Chapter Secretary
* Listing of on-the-air Chapter meetings
* Details of upcoming National Convention -- with photos, as soon as we receive them
* A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
* Rules and schedule for QCWA Phone and CW QSO Parties
* QCWA Memorial Scholarship Program
* Criteria for and recent winners of QCWA Awards
* A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
* Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address above. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify.

For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ

yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my intent is to make sure it stays that way. For this reason, I have applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is not limited to the US. This reflects the intent to make this directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so contributions that you were planning to make (prior to my recent troubles) are still current and most welcome. This repeater listing will be of use if people take an active part in making it accurate and useful.

+
+ I'm the 425 DX News Mailing List maintainer. Further info at:
+
+ http://www.fr.flashnet.it/cgi-bin/425dxnews-list
+
+ I'm the webmaster for:
+
+ http://www.fr.flashnet.it
+
+ (maybe soon www.saiu.it) and the FTP owner of:
+
+ ftp://ftp.fr.flashnet.it/
+
+ There's a /pub/ham directory there. There's not much at the moment but
+ you may use it if you want. Just send new software under /incoming
+ including a file which tells what kind of software it is.
+
+ Expertise includes anything related to the Internet.
+
+ I used to work HF, mostly CW and QRP.
+
+ I also love Linux but never used it for ham radio, except for a
+ satellite tracking software :)

>just some models? In particular, is this a problem with the IC-R71A?
>Is it feasible for the equipment owner to replace the battery without
>sending the radio to ICOM?

Yes, it's true. Most batteries don't last to infinity. It only affects the
models with the operating program held by the battery - 745, 751, etc.
You don't have to send the whole radio back, only the small board with
the battery on it. If you take out the battery to change it, the radio has
to be reprogrammed.

I have 4 Icom HF radios, some of which are going on ten years old, and
still on the original battery.

73, Jim KH2D

> England, not Guam.

I'm relieved that it's common and thanks :-)

Actually under the present call system it is not clear only from the call where Jim NOW lives or operates (although of course it should have been clear to me where it was issued), but certainly you are right that a different example would have been more appropriate.

I'm not sure I understood your comment about New England as my post didn't mention a first district call or suffix.

COLS COLUMN

SOMMERING'S TELEGRAPH

THE ELECTRIC TELEGRAPH TOOK A PRACTICAL FORM DUE MUCH TO THE
WORK DONE BY VOLTA, NICHOLSON, CARLISLE AND OERSTED. IT IS
RECORDED THAT SOMMERING WAS INTRODUCED TO THE TELEGRAPH IN A
MOST DRAMATIC WAY. ON 9TH APR 1809 AUSTRIAN TROOPS CROSSED THE
INN, CAUSING KING MAXIMILLIAN TO LEAVE MUNICH FOR DILLINGEN.
THE MINISTER FOR HOME AFFAIRS, MONTEGELAS TRAVELLED WITH
MAXIMILLIAN. AFTER JELLACHICH THE AUSTRIAN GENERAL HAD
OCCUPIED MUNICH, NAPOLEON RECEIVED NEWS OF THE DISASTER BY
CHAPPES MECHANICAL TELEGRAPH AND LEFT PARIS FOR BAVARIA IN
TIME TO LIBERATE MUNICH AND RESTORE MAXIMILLIAN ON 22ND APRIL.
THIS MEANS OF RAPID COMMUNICATION IMPRESSED ALL CONCERNED,
ESPECIALLY MONTEGELAS, WHO WITNESSED THE ASTONISHMENT CAUSED
BY NAPOLEON'S ARRIVAL IN BAVARIA. MONTEGELAS WAS A FRIEND OF
SOMMERING AND DINED WITH HIM ON 5 JULY 1809. AN ENTRY IN
SOMMERING'S DIARY RECORDS THAT THE MINISTER 'WISHED TO RECEIVE
PROPOSALS FOR A TELEGRAPH'.

SOMMERING DEVELOPED WHAT WOULD NOW BE CALLED A PILOT PROGRAM.
IT WAS A SMALL SCALE INVESTIGATION TO DEMONSTRATE THE

PRACTIBILITY OF THE PRINCIPLES HE PROPOSED TO APPLY. BRIEFLY HIS TELEGRAPH SYSTEM CONSISTED OF A NUMBER OF WIRES COVERED WITH SEALING WAX FOR INSULATION, TERMINATED IN METALS RODS. THESE RODS WERE INSERTED INTO THE BOTTOM OF TRANSPARENT CONTAINERS THAT CONTAINED SLIGHTLY ACIDULATED WATER. THIS WAS THE END OF THE LINE AT WHICH THE MESSAGE WAS RECEIVED. AT THE TRANSMITTING END, ANY TWO OF THE COMMUNICATING WIRES COULD BE CONNECTED TO A VOLTAIC PILE MADE UP OF FIFTEEN PAIRS OF DISCS (SEE LAST WEEKS CAST). WHEN THE CURRENT FLOWED GASES BUBBLED UP IN THE REQUIRED CONTAINER AT THE RECEIVING END OF THE LINE.

THIS PROTOTYPE MODEL OF HIS TELEGRAPH USED FIVE WIRES WHICH TRANSMITTED COMBINATIONS OF THE LETTERS A, B, C, D AND E. IT WAS SO SUCCESSFUL THAT HE STARTED WORK ON HIS MAIN APPARATUS. HIS DIARY FOR AUGUST 6TH SAYS ' I HAVE TRIED THE ENTIRELY FINISHED APPARATUS WHICH COMPLETELY ANSWER MY EXPECTATIONS. IT WORKS QUICKLY THROUGH WIRES OF 362 PRUSSIAN FEET' (BEFORE ANYONE ASKS I DO NOT KNOW THE LENGTH OF A PRUSSIAN FOOT).

THE NUMBER OF WIRES HAD INCREASED TO THIRTY FIVE AND WERE TERMINATED IN GOLD POINTS TO AVOID CORROSION. THERE WAS ALSO A BUILT IN ALARM TO ADVISE THE RECEIVING OPERATOR OF AN INCOMING MESSAGE.

SOMMERINGS TELEGRAPH ATTRACTED MUCH ATTENTION WITH AN IMPRESSIVE LIST OF ARISTOCRACY WHO HONOURED HIM WITH VISITS TO EXAMINE HIS INVENTION. THE MOST IMPORTANT OF THESE WAS SCHILLING, A MEMBER OF THE RUSSIAN MISSION TO BAVARIA. A PERIOD OF COLLABORATION AND A LIFE-LONG FRIENDSHIP OCCURED THAT SURVIVED THE POLITICAL UPSETS BETWEEN THEIR COUNTRIES.

ONE OF THE IMPORTANT EXPERIMENTS CARRIED OUT BY THE PAIR SHOULD BE MENTIONED. ON THE 5TH JUNE 1811, AT SCHILLINGS SUGGESTION THE CONNECTING WIRES OF THE SYSTEM WERE BROKEN AND THE ENDS DIPPED INTO WATER. THE SYSTEM STILL WORKED, A TRIBUTE TO THE SENSITIVITY OF THE 'GAS BUBBLE' INDICATOR. PRESUMABLY ONE OF THE WIRES WAS LEFT INTACT.
A FEW DAYS LATER COMMUNICATIONS WAS CARRIED OUT ALONG THE RIVER ISAR USING THE THE RIVER AS THE RETURN, OR, EARTH WIRE, THUS ALLOWING OTHER EXPERIMENTERS TO DO THE SAME, ESPECIALLY LATER WITH TRAMS WHERE THE RAILS WHERE USED AS THE RETURN WIRE. ALTHOUGH A SUCCESSFUL TELEGRAPH, SOMMERINGS INVENTION GAVE WAY TO THE MORE SUCCESSFUL ELECTRO-MAGNETIC TELEGRAPH WHICH WE SHALL KEEP FOR ANOTHER TIME.

FOR NOW 73S DE COL.

WEEKLY SOLAR AND GEOPHYSICAL REPORT

(27 SEPTEMBER - 03 OCTOBER)

ISSUED ON 04 OCTOBER 1996

SUMMARY
Date 27 28 29 30 01 02 03
10cm 70 71 70 70 70 70 70
A 18 19 8 5 3 13 (10 estimated)
T -11 7 1 3 1 10 -1

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 0N 30TH SEPTEMBER; QUIET TO UNSETTLED 27TH AND 29TH, AND 1ST TO 2ND OCTOBER; UNSETTLED TO ACTIVE ON 3RD OCTOBER.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE DEPRESSED 15 TO 30 PER CENT OM 27TH SEPTEMBER AND 3RD OCTOBER; OTHERWISE, NEAR PREDICTED MONTHLY VALUES.

FORECAST (04 OCOTBER - 10 OCTOBER)

SOLAR: VERY LOW

GEOMAGNETIC: EXPECTING UNSETTLED CONDITIONS, BUT ACTIVE CONDITIONS ARE POSSIBLE 7 TO 10 OCTOBER IF CORONAL ACTIVITY INCREASES.

FREQUENCIES: NEAR TO 10 PER CENT BELOW PREDICTED MONTHLY VALUES.

NOTES OF INTEREST:

ANGOLA, D2. Alex, PA3DZN plans to be active early October for at least 6 months or more. Look for him on RTTY.

CONFUSION, KH7. KH6BZF, Lee reminds us that the FCC has started to issue KH7 calls to Hawaii. These are not Kure

Island.

MYANMAR, XZ. KF7AY, Warren Hill has announced that XZ1AN will be active 16-25 November. Warren states that the door to amateur radio has been re-opened. The Central Arizona DX Association will be an all mode, CW/SSB and RTTY operation.

Those participating from the New World Inya Hotel near the city or Yangon are, AB6ZV, AA7WP, JA1BK, K5VT, KC5AYR, KF7AY, N6BT, WA6CDR, N7NG, N7WTU, NZ7E, OH2BH, WA7LNW and WY7K. Three Yeasu FT-1000MP's, Alpha amplifiers, mono band yagis and other special low band antennas will be used. This intense activity from this rare location, will make a great opportunity for all to work XZ. More to follow as we approach.

SILENT KEY, W0HAH. We mourn the loss of beloved RTTY DXer, Bob Stanek, W0HAH who became a silent key 16 September 1996 at the age of 72.

The VK2SG RTTY DX NOTES are also available on the Internet at reflector <digital-dx(AT)st.rim.or.jp>. Check also the OH2BUA Webcluster at URL <http://www.clinet.fi/jukka/webcluster.html>.

For next week's bulletin send your bandpass to

ARLD044 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, The OPDX Bulletin, Chris, G4BUE, The DX News Sheet, Charles, S92SS, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

SPRATLY ISLANDS, 1S. Jaan, 9M2JJ, has obtained permission from the Malaysian authorities to operate from Pulau Layang, but with a 9M6 call sign instead of the traditional 9M0 call sign. Jaan has filed another application, referencing the previous 9M0A and 9M0S operations and is awaiting a reply.

UGANDA, 5X. Peter, ON6TT/5X1T, reports Gus, 5X1D, has been active on 160 meters on 1823 kHz between 0230z and 0330z.

MOROCCO, CN. Andy, DL2GGA, will be here October 15 to 24, and plans to be active from the club station CN8MC, but probably using his own CN call sign which has not been issued yet. He will try to be active on all HF bands, CW only. QSL via DL2GGA bureau is preferred, but urgent requests via 95/96 CBA.

SYRIA, YK. Look for YK1B from September 28 to October 7. Details on this operation are very slim, but it was reported that this group will put an emphasis on 160 meters. QSL via DL8HCZ.

SAO TOME AND PRINCIPE, S9. Charles, S92SS, has resumed operations on 160 meters on Friday and Saturday evenings when possible, between 2230 and 0300 UTC. He will be active until June 1997.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 271

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, K2YJL, KA2AEV, N3ADL, KJ4VH, W5IJU & Island News, KF7AY, W8KKF, W9JOO, CT1EEB, DL2GGA, DJ8WL, G4BUE & the DX News Sheet, IK1DPA, ON6TT and VE2ZP/VE9CB following DX information.

C6, BAHAMAS. John, K3TEJ, and Ed, WA3WSJ, plan to operate in the CQWW CW contest (November 23-24th) from Abaco Island (IOTA NA-80). QSL via K3TEJ.

KC6, BELAU. The "Island News" reports Paul, LX2AA, will be active in the CQWW SSB Contest as KC6GB (or T82AA), and possibly just as T88A from Helen Reef in Palau's southwest islands (possibly a new IOTA reference). QSL via CBA.

COMING EVENTS

OCTOBER 19TH-20TH JARTS WW RTTY

LATE NEWS FLASH

THE WORLD WIDE PLACINGS AND COUNTRY/STATE PLACINGS FOR THE AMARTS WW RTTY CONTEST WILL APPEAR IN NEXT WEEKS CAST. WATCH THIS SPACE....

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD at VKWI2, or the Secretary (Pat) VK2JPA at VK2WI.

Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au
or patl(at)extro.ucc.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

Announcing NEW Ham Radio.FAQ

This file started as a regular USENET posting called "rec.radio.amateur
.misc Frequently Asked Questions".

The evolving file was distributed far and wide thanks to passionate
contributors. The file was abandoned in 1994 and has been resurrected
now on the WWW for currency and convenience.

Ham Radio.FAQ contains 3 chapters and many, many links to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or soon-to-be Hams
that you know or share with them the URL to this site:

http://www.mv.com/ipusers/wd1v

Thanks for your insight carlo. But instead of deciding what "kind" of
questions people should ask, why don't you listen? It's people like you
on the ham bands who scan around, listen for 1/2 sec, and then butt in
with some insolence and then wooooof off they go. You are like a zit.

Murata in the UK are in Fleet. Phone number is 01252 811666 but unless you
want to open an account with a turnover of several K you won't get
very far :-(

There are several distributors who you could try. Eurodis/HB Electronics
(01204 555000) being one in Bolton although Murata should be able to point to more local
ones (if your not in the NW !)

If you know the specific filter you are after Murata should be able to
tell you which distributors have or have had that particular item. If Murata
or a distributor have no stock you will probably be stuck with minimum order
via a distributor for a few hundred pieces.

> Collins mechanical filters and Hy Q or similar crystal filters.
> Again, I know these are sold by manufacturers such as AOR or Kiwa, but
> they seem to rather more expensive than they should be, as they are
> sold as spares or accessories for their products.

Even if you do find distributors with stock they may well be rather more
commercial that you wish and have minimun order value or qty in which case
getting the single units from AOR and the like can be your best bet.

Good luck with your projects.

ARLP041 Propagation de KT7H

ZCZC AP61
QST de W1AW
Propagation Forecast Bulletin 41 ARLP041
From Tad Cook, KT7H
Seattle, WA October 4, 1996
To all radio amateurs

SB PROP ARL ARLP041
ARLP041 Propagation de KT7H

We just completed a second full week of no visible sunspots.
Average solar flux was about the same as the previous week, and was
below the average for the past 90 day average, which is 71. It
looks like conditions related to the next cycle are not about to
turn up yet.

Over the month of October solar flux is expected to hover around 70
or below, as solar activity continues to stay very low. The
geomagnetic field is expected to become unsettled to active due to
recurring coronal holes from October 7-9, 17-20 and 23-25.

Sunspot Numbers for September 26 through October 2 were 0, 0, 0, 0,
0, 0 and 0, with a mean of 0. 10.7 cm flux was 70, 69.8, 71, 70.1,
69.5, 69.5 and 69.7, with a mean of 69.9.

: fairest method.

You folks really need to quityerbitchin. If it were *really* fair, they
would have let gate 2 be for ANY ham licenced 25 years or more, like it
used to be. At least that way those highly prized 1x2 calls would mean
something. Now, NO call will mean *anything*. Which is why mine
(hopefully) will be gone soon :-)

Keep posting these Mike. This is anything but an advertisement. Me
thinks we worry to much about the purity of Usenet (it isn't illegal
to advertise anyway). The short post of your's is a good piece of
info for those of us interested in VHF. I see nothing at all wrong
with what was posted.

4583. ARRL Contest Info

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-07 00:00:00 UTC
From: levine@mc.com
Message-ID: <53b2ff$t8q@newsy.mc.com>
Source record: 215423

I was very dissapointed to see that the ARRL has decided not to put
the rules and details of the ARRL Sweepstakes in QST as usual. Instead
they refer the ARRL member-subscriber to purchase another publication.

I do not see the logic in this except to sell the members more books.

This year brings a new section (up to 78 from 77) and even that was not
mentioned in the article (I think Northern New York is the new one??)

I urge members to email the ARRL (hq@arrl.org) if they feel as I do that
this info should be kept in QST. The contest page on the WWW for the
ARRL (http://www.arrl.org/contests/) doesn't have info for SS (besides the
date) and the file that contains the rules that is available for D/L
(arrlcn96n.zip) doesn't list the sections. Even QST doesn't have a concise
listing of all the sections (US & VE) so how does the league expect this
contest to grow and prosper?

Michael,

I agree completely. However, I believe the best possible treatment for such self centered egotists as Carl and his corps of effete snobs is to ignore them as if they did not exist. Reading Carl's self-aggrandizing, boastful posts on rrap made me realize that he considers himself a "legend in his own mind." One can only hope he will confine his prattle to rrap, to which I have unsubscribed.

It used to be that one had to sign 'portable' and 'mobile' with the
district when operating portable and mobile. However, something like
20 years ago the FCC dropped these requirements, I think at the same
time they dropped the logging requirements.

If you delete it, Win95 will "find" it during the next bootup. Simply
uncheck it from the configuration and it will be ignored.

Im sorry .... I got my license in 1970 and at that time you had to pass a 5 wpm code test, you were labeled class "C" meaning all you had to do was pass the 13 wpm code to get your General. In later years those "C" techs were granted some extended priviledges to seperate them from the No Code techs, one of those was a small portion of the 10 meter band to use.

I agree, that would have been best. Save 1x2 calls for Extra Class hams
who have been licensed for 25 years or more. And my opinion on this is not
at all influenced by the fact that I am an Extra Class ham and have been
licensed for 28 years :-). (Why I was a mere child when I got my license
back in 1968... with no "dad" or "uncle" who was a ham to help, either. :-)

But the 25 year rule for 1x2 calls was violated when they had the big 1x2
call assignment period in the middle 1970s, so I wasn't deluded that they
would be so historically minded this time. For a long time, you could tell
about when someone was licensed by their call. Now you can 'sort of' tell
their license class by their call.

Dr HAMS, I had a problem with my TS 440S, after 3 years it is not transmitting on 20m and on 15m and on 40m. The Display, the decimal points are flashing shortly. I think the PLL is unlocked.. Who can give me some Repair tips?
I Think it is a common TS 440S fault.

TNX , DK9XQ Johannes Hamburg, Germany

It wasn't a simple question because none of us have ever heard
of a "class C technician license". Could it be that you are asking
about the (coded class technician license) i.e., tech+? If so,
28.1-28.3 CW,RTTY,data and 28.3-28.5 CW,SSB

This isnt really meant to be an attack on anyone but right now im very disapointed in a fraternity that USED to be helpful to others and friendly, all of which seems to have been replaced with suspicion and attitude. I also am well aware that not ALL hams fit into this catagory of the "new wave" hams. I asked one simple question about a spectrum of frequency that i as a long time Technician who went the whole route of passing a code test and theory could now use and i get replies such as "what is your call sign" and "what is a class "C" and "wouldnt it be within the realm of knowledge requirement for a operator to know this?" If i knew i would NOT ask, and why should my call sign have anything to do with it, i have been licensed since 1970 by the way. If this is the mainstream attitude of the ham radio public then it is doomed to death. We need to work TOGETHER not AGAINST each other to keep people in our folds and to bring new in. We need to protect what we have...if you dont use it you lose it, this is what i was trying to do. Again i appologise to those that dont fit the above mold...those are the true hams the others? Well 11 meters is STILL there i think.

> later years those "C" techs were granted some extended
> priviledges to seperate them from the No Code techs, one of those
> was a small portion of the 10 meter band to use.

The bit about only needing the 13wpm Morse Code test for a General
Class License is true for all Tech's, and that is not the distiction
between your class and that of other newer Tech's.

The License Class of folks who now hold a Technician ticket and have
held it since before February 14, 1991 is now called Technician Plus,
and it differs from plain Tech's in that it holds the the sum total
of privileges of both the Technician and the Novice Classes.

On 10m you may use any frequency between 28.100 MHz and 28.500 MHz
and in the lower frequency half you may use c.w., rtty and data and
in the upper half only c.w. and phone (J3E and R3E).

BTW, it's not just some 10m frequencied that you get on HF. You also
have allocations on 80m, 40m and 15m.

At some time in the past it seems that FCC may have had a formal or informal policy of assigning calls to some entities based on a predetermined pattern.

For example, a lot of club stations at universities have calls in the pattern "W#Y$" (1x2, W prefix, with "Y" as the first letter in the suffix). There are a lot of those still around and I can remember many more in the past which probably are expired. Examples are W1YA, W1YU, W0YC.

Also, I seem to remember that a lot of Navy and Army Reserve Centers had calls in the pattern K#USN and K#USA.

It would be interesting if anyone knows of other old patterns like that.

By the way, my friend W0CRO is disappointed that he cannot retrieve his original call in the vanity program. It was 9CWN. (No, not W9CWN, not K9CWN, not N9CWN, just plain 9CWN!)

73, de Hans, K0HB (Whose original call KG6AQI will soon be recycled!)

a VERY common problem. The PLL circuit needs replacement. Can't
speak for Germany, but Kenwood USA charged several I know about
$180US.

The proof of the defect is that the display will show 7 dots. If you
see this..dots all folks...sorry couldn't resist.

good luck

steve

Read the text of the message I responded to in the first place and you'll
see.

> > And to think you call yourself a "real ham".
>
> Are God damn nuts. I NEVER EVER called myself that. Where did you get
> that from?

You don't have to call yourself that, Burt. You just act like you know it
all and that the rest of the world is (once again) INFOULABLE!!!

In short Burt, what you're saying is that you NEVER make mistakes. And if
you do, you don't acknowledge them.

I however will acknowledge the fact I may have slightly erred in my
comments regarding the hurricane (as you pointed out rather politely).

> > I'll admit it. I'm still a no-code techie. But given what you said in

> > Burt???? If so, I think you'll find yourself a VERY lonely person....
>
> I already have. Plus I appeal to congress to take the frequencies FROM
> hams and use them for a PRODUCTIVE purpose.

What other productive purpose can there possibly be, Burt??? Are you
suggesting that we hams just have access to HF, 6 meters, and microwave???
How can you call THAT "production" ESPECIALLY since there's other
UNOCCUPIED and UNUSED spectrum which they can obtain and make use of just
as easily!!!

How about 900 Mhz.??? I know there's not much Amateur activity up there.
And besides, satelites require the higher frequencies anyway. Do the
math, Burt!! Once you do, you'll realize that this is just yet another
ill-conceived attempt by a bunch of corporate bigwig yahoos who's only
knowledge of the satellite industry is the $$$ it puts in their pockets.

Therefore Burt, I submit to you that you are perhaps the ONLY ham on the
face of the earth (most certainly in America) who's IN FAVOR of the Little
LEO project.

My oh my!! How lonely that must be.....

> > And that leads me to this, Burt: If you HATE the hobby as much you have

No. It's rare (not to mention hard) for a ham to hear and accept a point
of view that ultimately leads to selling ham radio down the river without
a paddle!!!

Johannes-

I understand that Kenwood used some kind of potting material on the TS-440
VCO coils, that becomes conductive with age. I suppose it might have some
acid in it, that corrodes the coil wire.

This is the most likely theory I've heard about the TS-440 VCO problem.
If true, it is necessary to find a way to remove this material.
Replacement of the coils may be an alternative, if they are available.

So Burt, you are as incompetent as an Internet/Usenet operator as you are
a ham radio operator.

>Remember I was not the author however hams do a minute amount of good.
>But it is rare that a ham does anything but blab while sitting on his
>fat white butt.

That might be offensive to the several hams of darker skinned African
descent who I know around here, especially those who assisted (as did I)
with the emergency communications during Hurricane Fran. But then again,
accuracy has never been a strength of yours.

>> YO BURT!!! REALITY!!! Ham Radio is MUCH more effective in emergency
>> situations than cellular telephones. But then of course, living up there

Cell phones were of very limited use in the aftermath of Fran. A lot of
cell sites were out of service. When the governor needed to talk to
Wilmington from Raleigh, he chose ham radio, and we came through for him.

>I live on Cape Cod, Eduardo passed close enough to bring out the hams.
>What a sad bunch they were to listen to. They used 1000 words to convey
>what 10 words would have.

No doubt as a result of listening to you.

>> And to think you call yourself a "real ham".
>Are God damn nuts. I NEVER EVER called myself that. Where did you get
>that from?

No, you called yourself and the person who was the originator of that
post, "the big guys". Be careful, "big guy"... that pedestal you've placed
yourself on may not seem big enough as you inflate yourself.

>> There are MANY hams who work for a living. There are even husbands and
>> wives who communicate with each other via 2 meters and 440 EVERY DAY!!!
>That is the only way most hams COMMUNICATE with their wives. They NEVER
>make love.

Admittedly, that's what *your* wife has told many of us about you, but I
wouldn't generalize based just on your situation.

>We call those kids PIMPLE FACED GEEKS.

I guess that's why you're a teacher Burt... you like to pick on kids and
call them names.
And you being a teacher explains a lot about what is wrong with our
educational system.

>I have students that are ASHAMED to admit they are hams.

I'm sure they are ashamed to admit they have anything to do with you
in any way, shape or form.

>I will pee in my pants from excitement. My daughter was licensed at age

Undoubtly a common occurance for you. There are some undergarments (adult
diapers) sold nowadays that can help you with these unfortunate incidents.
My elderly grandmother had to use them.

>8 to
>a license HIGHER than yours. Big deal.
>I already have. Plus I appeal to congress to take the frequencies FROM
>hams and use them for a PRODUCTIVE purpose.

Based upon the incoherent way you express yourself, I'm sure
your congressional office holds your opinions at the same level of esteem
as does everyone here on the newsgroup.

> (<
> \ |

Wrong again, Burt. That is a pictorial representation of a female.
Burt, there is a REALLY BIG DIFFERENCE between a picture of a female, and
an actual female, but I suspect you haven't had many occasions to find that
out. Perhaps that's why you hate ham radio so much... the money you spend
on ham radio gives you less money for your subscriptions of Playboy,
Penthouse, et al to expand your experiences with [pictures of] females.

FEATURE/Simulated Emergency Test helps Amateur Radio operators prepare for real emergencies
Feature Editors, Communications Writers

FEATURE...

NEWINGTON, Conn.--(BUSINESS WIRE FEATURES)--Oct. 7, 1996--When wildfires swept through Alaska in early June and both cellular and conventional phones became overloaded, Amateur Radio operators provided an essential communications link between Anchorage and an evacuation center at Wasilla, 50 miles away.

Amateur Radio operators also provided vital communications for the Red Cross following the crash of TWA Flight 800 off the coast of Long Island earlier this year.

Within minutes of the Oklahoma City bombing in April 1995, Amateur Radio operators were on the scene, providing an emergency communication network that helped organize supplies and coordinate fire, police and rescue crew efforts from various communities. The Amateur Radio community was praised by Oklahoma Sen. Don Nickles in the Aug. 11, 1995 Congressional Record for `providing an essential service to rescue operations.`

These volunteer communication efforts didn't happen by accident. Amateur Radio operators are often among the first to respond to emergencies. That's why the 172,000-member American Radio Relay League (ARRL) annually sponsors the Simulated Emergency Test for its members. This year's test takes place the weekend of Oct. 12-13.

The exercise is held in conjunction with emergency aid providers such as the American Red Cross, Salvation Army and the Federal Emergency Management Agency. Last year's participants provided communication during simulated tornadoes, earthquakes and air disasters.

`The Simulated Emergency Test challenges the communications skills of thousands of Amateur Radio operators who are members of the Amateur Radio Emergency Service, a network of more than 35,000 Radio Amateurs nationwide,` says Steve Mansfield, legislative and public affairs manager for the ARRL. `The simulation helps amateur operators train for real emergency communications situations.`

According to Mansfield, the exercise teaches Amateur Radio operators how to handle messages from other individuals and agencies using a standardized message format. Amateur Radio operators witness the National Traffic System in action as messages are carried via assigned liaison stations to all levels of the

message-handling system.

The ARRL provides emergency coordinators in all 50 states with the support and background materials they need to participate in the simulation. Many times, these demonstrations convince government officials to include Amateur Radio in their emergency communications plans.

There are more than 650,000 Amateur Radio operators in the United States and about 2.5 million worldwide. Information on how to become involved in ham radio is available from the American Radio Relay League, 225 Main Street, Newington, CT 06111 or by calling 1-800-32-NEW-HAM. -0-

NOTE TO EDITORS: Tech Image Ltd., the ARRL's national public relations firm, can provide licensed Amateur Radio operators who participate in the Simulated Emergency Test for interviews. Call Mike Nikolich at 847/705-0040, ext. 222 for more information.

[999]

C L O S E D C I R C U I T A D V I S O R Y

Newsline report number 999 for release on Friday, October 4, 1996 to follow.

(*****
The following is a QST

The Department of Defense ends the use of Morse code in the Military Affiliate Radio System. Also, will your new vanity call be issued by lottery? Find out on Newsline report number 999 coming your way right now!

(*****
MARS BANS CW

The Department of Defense has unilaterally banned the use of Morse code on all Military Affiliate Radio System circuits. CW nets and other Morse activity in the Military Affiliate Radio System were ordered to cease operation effective October 1st.
A final CW message was transmitted simultaneously on Army, Navy and Air Force MARS frequencies at 13:00, 15:30 and 17:00 UTC on September 30th. A special certificate commemorating the demise of CW in the Military Affiliate Radio Service is available to any MARS member that correctly copied that final message.

No detailed explanation was given for by the Department of Defense for dropping the use of CW in MARS communications. Observers say that this could be the final impetus needed to get the code dropped as a mandatory testing requirement at upcoming World Radio Communications Conferences before the end of the decade.

N6NHG INDICTED

Kevin David Mitnick, N6NHG, has been indicted on new charges of carrying out a thirty month reign of software thefts that cost the nations corporations millions of dollars. The thirty three year old convicted computer hacker was charged on Thursday, September 26th with a new twenty five count indictment. An indictment that accuses him of breaking into the systems of software companies and attacking computers of Internet service providers.
News reports say that Mitnick and a co-defendant were indicted on charges that include wire fraud, impersonating company employees to gain access to computers and using cloned cellular phones and damaging computers at the University of Southern California.
Mitnick is considered one of the worlds leading experts at writing computer security breaching programs. Authorities say that this allowed him to gain access to even the most heavily guarded computer systems.
Using the internet pseudonym of Condor, N6NHG eluded investigators for two and a half years. He was eventually caught in February in Raleigh, North Carolina. This, after authorities enlisted the help of a computer security expert. In addition to this hacker tracker, the nationwide investigation involved a multi agency task force that included the Federal Bureau of Investigation, the Internal Revenue Service and the Department of Justice and NASA.
Mitnick has previously pleaded guilty in April to one federal count of cellular phone fraud and violating his parole from an earlier computer fraud conviction. That case concerned his activities between January and February of 1995 in North Carolina. This latest set of indictments alleges a set of crimes committed between June 1992 and February 1995. If convicted on all counts, Kevin David Mitnick, N6NHG could face up to 200 years in federal prison.

(*****
HAMS CHARGED IN PHONY POLICE CALLS

Three ham radio operators from Mesa, Arizona, have now been officially charged in the wake of a year long spree of false distress calls and profane broadcasts on police, fire and ham radio frequencies. The trio, reportedly led by a 16 year old Mesa Police Explorer Scout, are alleged to have faked reports of bomb scares, carjackings and robberies, and officers in distress. Investigators claim that the three also played music on emergency channels and harassed police dispatchers.
Charged in the case are 20 year old Christopher R. Johnson, KC7QPJ. And in an unusual move, police also released the identity the two 16 year old minors. They are identified as Brad E. Shelley, KC7JQY, and Joshua D.

Cavender, KC7JGH. Johnson and the teenagers are accused of interfering with public safety frequencies, impersonating a police officer and false reporting.
As first reported on Newsline a month ago, it was members of the Arizona Repeater Association's Local Interference Committee located the alleged offenders. The ham radio operators also aided police and FCC inspectors in gathering enough evidence to make the arrests.

(*****
FCC FINE AGAINST COFFIELD REAFFIRMED

The FCC is holding then line on a fine that it issued against a Californian for operating without a license. The FCC has denied +n application for review of a $2,000 fine against Danny Lee Coffield of Lakewood, California. This, for unlicenced operation in spectrum adjacent to the 11 meter Class D Citizens Band.
The FCC Compliance and Information Bureau had leveled the fine last year and affirmed it earlier this year. Coffield was cited for operating an unlicensed transmitter on 27.7744 MHZ back in 1993. Since that time, he obtained an Amateur Radio license.
The FCC says that it had warned Coffield of the potential penalties for unlicenced operation prior to citing him on September 29, 1993. The FCC has not indicated whether Coffield's ham license, issued in 1995, would be in jeopardy.
The Commission acted on the review application on September 19th.

NEWSLINE PAST 1000

Some good news and some bad news about our finances here at Newsline. According to our support fund administrator Andy Jarema, N6TCQ, there is enough in the way of funds now on hand to keep us in operation through early December. Unfortunately, there is not enough to take us to into 1997.
Newsline will not disappear after newscast number 1000. On the other hand we honestly cannot tell you how long we will be able to maintain service. Obviously your continued support is needed right now to keep Newsline serving you into 1997 and beyond.
Our address is the:

Newsline Support Fund
P.O.Box 660937
Arcadia, California
91066

We thank you for any help you can provide.

(*****
LIKE A LOTTERY

The FCC is handling Gate 2 of the vanity call sign program almost as if it was a lottery. Gate 2 opened on September 23rd and within days the agency was deluged with requests for new calls. As of August 26th, the FCC

had received 339 applications filed electronically and 4148 Paper.
The FCC says it won't start to grant new call signs until all applications for a given day are entered, whether they were filed on paper or electronically. When the agency finally starts granting new call sign requests, they will be done in random order. A lottery of sorts.
The agency also says to be patient. It could be a few weeks before your application is granted.

(*****
K1AR LEAVES CQ MAGAZINE

Some names in the news. First is John Dorr, K1AR. John has left CQ Communications to accept a new position in product marketing for Cerulean Technologies, Inc., of Marlborough, Massachusetts. Cerulean is the result of the commercial application of DX Packet Cluster software and technology. The company recently entered into partnerships with two of the largest mobile data carriers, Bell Atlantic NYNEX Mobile and GTE Mobilnet, to give police officers on the street wider latitude in tracking down stolen vehicles and cuffing drivers with criminal warrants. Dorr says that he left CQ only because of the opportunity this represents and because of his desire to return to the Massachusetts area. He will continue to edit the magazine's Contest Calendar.

(*****
HUDSON DIVISION DIRECTOR RETIRES

And the Leagues' Hudson Division Director Paul Vydarney, WB2VUK, resigned his seat on the ARRL Board, effective September 5th. WB2VUK cited job and church obligations as preventing him from doing what he considers a proper job of fulfilling his duties as director.
Vice Director Richard Sandell, WK6R, of Scarsdale, New York, becomes director for the remainder of Vydarney's term, which expires January 1, 1997.

(*****
RCA HONORS HAMS

The Radio Club of America has announced that Carole Perry, WB2MGP, will be the recipient of its 1996 Barry Goldwater Amateur Radio Award. Perry is a secondary school teacher from Staten Island New York. She was selected based on her dedication in introducing New York City school children to the thrilling world of ham radio.
Also receiving honors from the Radio Club of America are Frank A. Gunther, W2ALS, will get a commendation named in his honor and Fred. M. Link, W2ALU, will receive the President's Award. All three will be recognized at the Radio Club of America annual banquet on Friday, November 22nd in New York City.

(*****
HAM TEACHER FEATURED IN MAGAZINE

And past ARRL Professional Teacher of the Year Sheila Perry, N0UOP, of Bloomfield, Missouri, was featured in the August edition of Learning

magazine. The article highlighted her SAREX work and cited ARRL's Educational Activities Department as the place to get more information. By the way, as far as we know Carole Perry and Sheila Perry are not related to each other.

(*****
BITBUCKET

BitBucket is a newly created mailing list reflector devoted to specialized amateur radio communication techniques. This includes SSTV, ATV, FAX, Packet, Pactor, G-TOR, Clover and much more. To subscribe, send e-mail with body of message "subscribe bitbucket" to

majordomo@primenet.com

(*****
THRUWAY HAM ACKNOWLEDGMENT

The New York State Thruway Authority will help to promote ham radio. The agency has announced plans to place ARRL Amateur Radio recruitment brochures at rest stops along the toll highway.

(*****
WRC MEETING

A meeting of the worlds telecommunications leaders is taking place in Tel Aviv Israel as we go to air. This is a 1996 preparatory World Radiocommunications Conference and several items of interest to Amateur Radio are being discussed.
Not being talked about this time is the abolition of the Morse Code testing requirement for getting a ham ticket. That matter comes to the table in 1999. More on this WRC next week.

(*****
UK CW TEST FEE

From England, news that its going to cost more to pass a Morse Code ham radio test in the United Kingdom. The Radio-communications Agency has agreed to a rise in the fees for Morse code tests. From the 1st of September the new rates are 20 pounds Stirling for the 12 words per minute test and 15 pounds Stirling for the 5 words per minute Morse code test, in British currency.

(*****
NEW UK BEACON

A new 50 MHZ propagation beacon is now operational. As part of an experiment by the RSGB Propagation Studies Committee, Chris Deacon, G4IFX, of Darlington in County Durham, has been granted permission to use the callsign GB3IFX for his 50 MHZ tropospheric tests. The beacon transmits on 50.275MHz, on the hour, every hour, in 30 second bursts during which the callsign and time are sent twice.

(*****
NOEL EATON. VE3CJ, SK

Noel Eaton, VE3CJ the former ARRL Canadian Division Director and President Emeritus of the International Amateur Radio Union has died. According to IARU Region 2 President Tom Atkins, VE3CDM, Eaton passed away in the early hours of Saturday, September 28th. A memorial service is planned for Toronto on October 11th.

(*****
DX

Brett Graham, VR96BG, reports that hams in Hong Kong will be allowed to use several prefixes to commemorate the transfer of sovereignty over the territory from the United Kingdom to the People's Republic of China on July 1, 1997. At the request of the Hong Kong Amateur Radio Transmitting Society, Hong Kong amateurs will be allowed to change the numeral in their call sign to 96 during 1996, to 97 during 1997, and to 98 during 1998. Graham says that Hong King Amateurs began to use these new prefixes on September 10th with a contact between VS96BG and VR96GO. The Hong Kong club says it will announce later the details of a new award to be offered to amateurs for contacting stations using these special prefixes.
All Hong Kong amateurs have held licenses with call signs using the prefix VR2 for several years. Those previously holding VS6 calls are allowed to continue to use the VS prefix through July 1st of 1997. The VRA to VRZ block allocated by the ITU to the United Kingdom will be transferred to the Peoples Republic of China at that time. The only other use of that block at present by amateurs is on Pitcairn Island, where VR6 calls are still in use.

NEWSLINE CELEBRATES 1000 ON HRM

Finally, part of Newslines worldwide celebration of its 1000th newscast will take place on shortwave radio. This thanks to Len Winkler, KB7LPW of Phoenix, Arizona. Winkler has invited Newsline to be on his October 13th edition of Ham Radio and More that airs on broadcast station nationwide and on shortwave worldwide.
Joining Len will be Newsline Producer Bill Pasternak, WA6ITF and several other Newsline regulars. Bill will also have some vintage audio clips from the early days of Newsline when it was still known as the Westlink Radio Network.
Ham Radio and More airs tape delayed on radio station WWCR every Sunday at 22:00 UTC on 7.435 MHZ. WCCR is located in Nashville, Tennessee and has an effective radiated power of 100,000 watts. The show is also simulcast in Real Audio format on the World Wide Web.

Avoid coming to Hawaii this weekend if at all possible. We've
scheduled a tsunami to hit the state on the 12th. All of Waikiki
Beach and other areas of the islands will be inundated with a
giant surge of ocean water due to some far off seismic disturbance.
Luckily, it won't happen until 0900 so I'll still be able to get
in my morning swim...

Water temp is still 83.

As I recall, K#Fxx and K#Nxx were reserved for Air Force
and Navy military recreation stations, respectively. In the
mid 60's I got K3FXJ as a second station license -- the FCC
had skipped K3Fxx and went back and issued them (except maybe
K3FAx?) after finishing K3Zxx. And a friend of mine spent
part of his time in the Navy overseeing K4NAA outside
Washington DC.

Actually the district was only required on CW (and RTTY?) --
for voice operation it was "portable" or "mobile" followed by
geographic location. Lots of folks did it wrong though..

When I changed my mailing address (about one year prior to renewal)
the FCC also renewed my license; it's new expiration date is in 2006
rather than in 1997. So it's possible that the anniversary and renewal
dates will coincide.

However, they ARE still monitoring from many of these
same sights, remotely. The data is sent to a central
monitoring station near Washington DC, I believe. So
the FCC is still monitoring both commercial and amateur
activity in both the HF and VHF spectrum areas. They
have to, by law, I believe. This is another example of
Ann Rands(Sp?) thesis that eventually all jobs for
most people will be taken over by computers and
machines. Only the very brilliant few will remain useful
to the on going economy and whatever life style will exist
for the un and under employed.

The Boston field office in Quincy Mass. can remote control the Maine
monitering post as well as any of the others they need in the Region.
From what I understand these are just further staffing cutbacks that
continue to make it harder for them to do their job.

>and IC-751 are the amateur transceivers affected.

The IC-735 may have its programming in ROM, but it DOES use a lithium battery "to provide power to the CPU so it retains all memory information during power failures, or when the unit is unplugged or turned off." (Section 4-8, page 18 of the IC-735 Instruction Manual.)

The manual for the IC-735 goes on to state that the lithium battery life is approximately five years and to "replace the battery if there are repeated cases of display malfunction."

My comments (above) applied to both the IC-735 and IC-R71A and the fact that the lithium batteries will (eventually) require replacement.

It's nice that only one will "lose its marbles" when the time comes!

I'll agree that early Amateurs were concerned with throughput too.
But you seem to imply that rag chewing was somehow less a part of the
hobby than it is today. I don't think anyone could make that
statement based on a verifiable fact. My guess is that ragchewing
has always been a part of Amateur Radio. Surely it must remain a
part, or else what's the throughput for?

> The radio pioneers weren't playing a game, they saw *application*

If by radio pioneers you mean Marconi and Hertz, sure. But Radio
Amateurs I think saw fun in operation just as much (if not more) as
an application.

> Contesting, like racing, was once touted as a method to "improve
> the breed", and in fact it may have once done so. But just as

> in golf and tennis some worthwhile physical exercise is gained
> in the process of the competition.

I'd disagree that contesting does not serve some useful purpose.
The contesters I come into contact with are without a doubt the
best operators I know. If I were on a sinking boat trying to
keep contact with someone on shore I'd want that person to be a
contester as they would not likely have experience in exchanging
information in adverse conditions.

During one disaster (Mexico Earthquake?) one contester's station was
put into use for emergency traffic because it was more capable of
keeping contact with the affected area than other stations.

Even in the case of a non-weak signal environment, on-the-air training is important. I've helped provide public service communications
for the Capital 10K here in Austin. The difference between an experienced op and others is increadible! Even with a perfect communications system there is also a need for good operating skills.

Very little in Amateur Radio breaks totally new ground. Packet, SS, CDMA, Pactor are all borrowed from other services in some form. I don't expect Amateurs to compete with commercial R&D. We don't have the resources. "We" should, however, try to increase our knowledge and abilities. This include technical knowledge and on-the-air operating abilities.

> I would suggest, however, that it is better to derive fun and
> satisfaction from more progressive and useful activities than it
> is to rehash old exploits over and over again. Just how many times
> must DXCC be accomplished before it is accepted by everyone as a
> done deal?

The overall accomplishments of Amateur Radio is important. But equally important are the accomplishments of individuals in Amateur Radio. Sure lots of people have worked DXCC but if some young Ham learned how to make a better antenna, to properly ground his/her station, the characteristics of RF propagation, to listen carefully and in doing so worked over 100 countries, isn't that worth *something*. Amateur Radio, to me, is about trying new things and learning. In the case I described, that happened.

> From the perspective from which we currently stand, if we look

> or are we to be in the forefront of communications technology as
> we were until recent times?

I'm not sure that Amateurs were really at the forefront of comm technology until recent times. Amateurs make a few real innovations now and then but I think Amateur Radio does a better job (or can) of raising the base-level technical knowledge of its users.

> There's fun to be found in either direction, but I know which

I think that there is enough room in Amateur Radio for both.

the spectrum which correspond to the vco segments.
Kenwood potted the entire vco with a wax that becomes conductive and
will destroy the vco diodes. If that is the problem, you must remove
the potting wax and replace the bad diodes. (Do not replace the wax)

It is a bit of work to get the gunk out, but the repair parts are
not expensive.

Good luck

This is a fairly common problem with the larger TS-940 rigs, too, but
all it requires is the PLL circuit be peaked. In the -940 the procedure
consists of peaking three coils while monitoring one test point.

Are you sure this requires a complete PLL repleacement for the -440?

>Fellows, I think both modes have their strengths and weaknesses.
>Under very difficult conditions, noise, QRM, etc it is likely that
>CW will get thru better than digital modes. In normal conditions,
>the digital will outstrip the CW for speed.

Well, some of the more primitive digital modes fit that description pretty well. But even with RTTY, my P-38 can give good print on signals I can't reliably discern by ear. And that's not just my experience, the reviewer in QST said the same thing. With error detecting and correcting modes, it only gets better. It may be true that a DSP optimized for CW signals might also bring them up to where you could copy them by ear under the same conditions, but certainly not at 60 WPM. The EMEer's experience with DSP would seem to back this up.

Now if you slow the rate of the digital signal, use soft decision decoding, and strong FEC, I'm positive the digital signal can be copied perfectly in conditions where the CW signal can't be copied at all. NASA proved that over 20 years ago. Back then it took a room size computer to do, but Phil Karn has shown you can do it today with an ordinary PC and sound card. (And I'm much impressed by that given the direct I/Q experiments I'm currently doing using dedicated DSP hardware. Of course if I were half the programmer Phil is I'd be dangerous.)

>As for tuning, and getting set up, if you can hear the CW, you can
>copy it. Tuning the signal in is much more critical on digital
>modes.

Well, yes, it can be, but some of the systems have tuning aids which make it awfully easy (again the P-38 tuning indicator is very good for showing you signals you can't even hear). And there are other systems which are adaptive, IE get the signal in the receiver passband and the DSP will find it and build an adaptive matched filter around it, and track it if it drifts. This is similar in principle to the automatic hetrodyne notchers on current DSP filter boxes. This makes the tuning problem moot. (Though in some cases it can make signal aquisition time rather long if the desired signal is particularly weak.)

>And for digital modes you need a lot more equipment than just the
>radio. Computer, keyboard, monitor, etc. And computers do radiate
>a bunch of hash and noise.

Using a PC is certainly the simplest method today. It's cheap, widely available, and adequate to the task. Its noise is also straight forward to suppress. But there's no reason the computer power can't be built directly into the radio. In fact, several of the latest rigs already have DSP on-board, and already have microprocessors on-board to handle other radio functions.

Since these chips are getting more powerful, and cheaper, with virtually every passing day, it isn't unreasonable to expect a completely self-contained digital radio system in the very near future for amateur use. Such systems already exist for military and commercial use. Amateur rigs already have alpha-numeric LCD displays, and adding a rugged membrane keyboard would be trivial.

If my I/Q experiments live up to theory (and commercial systems already show the theory sound), then the radio part of the digital radio system can be considerably simplified from today's radios. That means costs will remain within the range amateurs are willing to spend.

>Each mode has its time and place. And for Amateur radio purposes,
>what counts is not throughput, but what the particular ham enjoys.

Individually that's true, but we must also consider the aggregate impact on our spectrum. We can collectively exploit our spectrum much more effectively if we adopt efficient modes with good throughput. Not everyone has to do it for a positive impact to exist, of course. All we need is to get a substantial number operating more efficient modes in order to improve the utility of our bands. One of the major advantages to switching to more efficient digital modes is that we can run QRP without the throughput penality of using OOK Morse. That automatically means less RF on the bands, and for a shorter time per contact with a given content, and with less mutual interference too.

>In favor of digital I will say that the time has finally arrived that
>it is reliable enough, etc., that commercial services have adopted
>it in lieu of CW. But they are channelized services, with 10 hZ
>tolerance, and that is definetely not amateur radio.

But newer radios do tune in 10 Hz steps, Icom's entry level IC-706 for example, older analog radios tune in even smaller "steps". If you mean drift, adaptive modems can track that. And channels exist whether we name them that or not. One of the properties of strong digital systems that I'm trying to exploit now is the ability to partially overlap other signals without serious mutual interference, so all stations don't have to cling to the same idea of "channel" in order for the system to work well.

We already know how to share a fully overlapped channel, we call it packet, though we don't implement it at all well today. We could do lots better, but we froze the system definition too early. We can fix

that, but we have to deal with the current installed base, and that becomes a political problem. As older hardware TNCs give way to software/firmware based digital systems, that problem becomes easier since the system definition can be changed by just downloading new code. Stations could even bootstrap themselves automatically on the air when they contact a station running a later version.

No, even the Beverage reaches a point of diminishing returns at
about the 8 wavelength size. A Beverage *needs* lossy Earth in
order to function as intended.

When I was a novice in the Sixties, the novice license had a 2 year non renewable term. Incentive licensing had not started, general had all privileges. The same theory exam was used for technician and general. The novice theory and code were required for both classes. If you took the written exam and not the 13 wpm code test, you ended up a technician with all vhf priveleges but no hf. That was dumb and it is no longer the case. Now, a technician is not required to take the 5 wpm code test. But if a technician has passed the 5 wpm code, he/she also has novice privileges in addition to technician. This applies in your case.

Ok, now we can help. You're what's known as an Old Tech which is the
same thing as a Tech Plus in terms of privileges. You can operate from
28.1 to 28.5 MHz on the 10m band. CW anywhere in there, of course,
RTTY/data between 28.1 and 28.3 MHz, and SSB/image (slow scan or fax)
between 28.3 and 28.5 MHz.

I thought that the reason for publishing NCJ was to get the contest
stuff *out* of QST and into a magazine aimed solely at the gaming
crowd. QEX is intended to get the techie stuff out of QST. (I don't
quite know what that leaves to be *in* QST except product reviews,
advertisements, a few columns, and mice type no one reads.)

If we're going to put the gaming material back in QST, we ought
to put the techie stuff back in too. Then I can save $12 a year.

May be you will interested in this information.

It was created in compliance with international requirements of ITU, IMO, and INMARSAT for preparing and attestation of marine specialists for work in GMDSS areas A1, A2, A3, and A4.

The learning environment of the Trainer is based on the teacher's handbook in the field of GMDSS. It's kept in the informational database of the Trainer, in form of a classical Hypertext and provides the user with main information on all chapters of the training program.
The database contains texts, color pictures, video films, graphic maps, data of coast radio station, etc.

Practical tasks are implemented by a complex of hardware radio communication means (in form of active representation on display's monitor), instruction for their operation, and informa-tion for on-line radio traffic in case of distress, emergency, activities to ensure navigation safety, as well as for commercial radio traffic.

We also have demo version (size of it is about 2.5MB) and we may send it to you if you are in interest.

Your faithfully,

Alexander Nikolayev

Welcome to usenet, the net, newsgroups and the computer-based info-age.

Actually, it was NOT a simple question. There is so much noise and
garbage in the newsgroups that most folks thought there was a high
probability that you were not a ham.

I had no idea what a class C Tech license was and I've been licensed
since 1971. Since I've never held that license, I would have told
you that there was no such thing.

If you still hold a valid license, you'd best check the regs on
just about everything since so many things have changed.
You probably hold the equivalent of a "Tech Plus".

Absolutely. I do not for a minute want to imply that conversation
is not a laudable use of amateur radio. It is one of the main things
that content is for, others being traffic handling, emergency communcations,
etc. What I meant to imply was that the fact of the contact's existence
alone was not the primary reason for the early radio pioneers' activity,
nor was it the primary reason for the early amateur's activities. Once
they knew contact was possible (and that's been a well established fact
for a very long time), the focus shifted to *doing something* with the
contact. Whether that was passing formal messages or casual chatting is
not the issue. The issue is that they started to exchange *information*.

>> The radio pioneers weren't playing a game, they saw *application*

>If by radio pioneers you mean Marconi and Hertz, sure. But Radio
>Amateurs I think saw fun in operation just as much (if not more) as
>an application.

Well, of course, amateurs get paid in no other coin. But the mere
fact of contact isn't much fun for long, especially if many others
have already "been there, done that". How many stations do you have
to work at the antipodes before the novelty wears off? (Apparently
for some of today's amateurs the answer is *all of them* and *several
times over*.)

>> Contesting, like racing, was once touted as a method to "improve

>keeping contact with the affected area than other stations.

Well, I was very involved with the Mexican earthquake communications.
I didn't hear much contest style operating (though unfortunately I
did hear some). The fellows who were best prepared for that were
traffic handlers who were well skilled in moving books of traffic
efficiently. (I say that as an old traffic handler.)

>Even in the case of a non-weak signal environment, on-the-air

Yes, good operating skills are vital, but the skills required are
not those of the contester. They are the skills of the public
service communicator. And those skills are different from those
of the contester.

>Very little in Amateur Radio breaks totally new ground. Packet, SS,

>operating abilities.

You are correct that we should not compete with commercial R&D.
We should be working in the areas that they pass over as not
having a quick enough payback to affect next quarter's profits.
We should be looking at systemic things that don't necessarily
accrue benefit to only one company. Most really novel ideas
don't come from commerical R&D labs. They are too tightly

focused and goal oriented to seek out areas that don't virtually
guarantee an immediate commercial payback. (There once were
exceptions to that, like Bell Labs and Sarnoff Labs, but those
days are gone.) We have resources the commercial R&D outfits
only dream of having. We have *time* and *freedom to experiment*
just because we're interested that they no longer possess.

>Amateur Radio, to me, is about trying new things and learning. In the
>case I described, that happened.

I'll agree that there is some small training value to that for the
newcomer, but it doesn't explain amateurs with 25 years or more
service still doing the same thing. Any training value it might
have is long accomplished.

>job (or can) of raising the base-level technical knowledge of its
>users.

Well that amounts to the same thing if amateurs try to keep that
base level current. What's happened though, is that many amateurs
have frozen their base level somewhere back in the 1950s for the
most part. That's not raising the base level, as time goes on,
that's actually lowering the base level compared to current
technique. I'm not suggesting that every amateur go out and
invent something new next week. I'd be quite happy if they'd
just try to move their base level forward a bit each week so

that they at least don't keep falling further and further
behind.

>> There's fun to be found in either direction, but I know which

Hello.
I've just updated my FTV program, which does FAX & SSTV using a SoundCard, to decode Baudot using the same (FM) demodulation engine.

Here is a run down of the more interesting features:

(1) It keeps the demodulated signal in memory, so that the signal can be analysed again at a different keying rate or polarity! Garbage can be resampled on the fly, which means that minutes of received signals decoded at the wrong baud rate or keying polarity are recovered, on the fly, while still receiving.

(2) Keying rate and polarity are analysed automatically - standard baud rates are automatically set following analysis.

(3) Tuning oscilloscope available at all times, without loss of copy.

(4) Program works in real time.

(5) I wrote it, and I love it - I myself can't believe it works so well!

Download your copy of FTV from my web site, at:
http://www.geocities.com/SiliconValley/2504

System requirements, and the standard features of FTV are described in the following page:
http://www.geocities.com/SiliconValley/2504/ftv.htm

By the way, AM signals from low orbiting weather satellites are also decoded - no extra interfaces needed. Demodulation mode is user selectable in software.

Hope you all have a load of fun receiving 'words and pictures' - I hope to get some feedback !

All the best from Brian, 9H1JS, on the Island of Malta.

>
> I do not see the logic in this except to sell the members more books.

The rationale for this is that pages in QST cost a lot of money and a
decision was made to cut back on the exact contest rules (which seldom
change from year to year) to save space for other items.

I believe (haven't seen the latest QST yet) that there are SS "rules"
in QST, just not the official legalese. The "in-a-nutshell"
announcement
was also hoped to be less intimidating to first time contesters.

You don't have to purchase another publication to get the full rules.
The
full text of the rules is available on-line for free.

> This year brings a new section (up to 78 from 77) and even that was not
> mentioned in the article (I think Northern New York is the new one??)

Yes, that should be a new one this year. I'm surprised that they did
not
at least mention that.

> I urge members to email the ARRL (hq@arrl.org) if they feel as I do that
> this info should be kept in QST. The contest page on the WWW for the
> ARRL (http://www.arrl.org/contests/) doesn't have info for SS (besides the

> (arrlcn96n.zip) doesn't list the sections. Even QST doesn't have a concise
> listing of all the sections (US & VE) so how does the league expect this
> contest to grow and prosper?

Now that I think about it I can't recall SS rules announcements having a
complete list of sections either. That probably would help newcomers.

I would also encourage everyone who thinks the full rules should be in
QST to
write to the ARRL as well. Any organization functions better when the
membership lets its feelings be known.

>It's high time the "CW olde fartz" stopped whining about the "good old
>days" and realized that in the "good old days" the hams were the
>INVENTORS and ADOPTERS of NEW TECHNOLOGY ... not the lazy, stagnated,
>technophobes they've become.

Carl,

You should broaden your horizons, and observe what is going on
outside the FM sub-bands.

You might wish to "watch the skies" next spring when amateurs
launch Phase 3D. Or get a copy of the "Proceedings" of the
latest digital conference or the last VHF conference. Or check
out some of the work written up in QEX in the last few issues.
Or peek over the shoulders of the guys at TAPR. Or subscribe to
the "Radio Designer" reflector. These are just a few
"visible" places, not counting all the quiet "invisible"
tinkerers, which suggest that "lazy, stagnated, technophobes"
is a somewhat innacurate set of descriptors.

By the way, amateurs have NEVER been much in the way of
"inventors". Even Marconi was not an inventor, but rather
what today we might loosely call a "systems integrator" in
that he took the theoretical work of others and crafted a
working system from the "parts". So it is with the very
incomplete list of examples I give above.

>field offices are equipped for monitoring frequencies at VHF and above.
>The monitoring stations were additionally equipped to monitor signals
>in the high-frequency (HF) range. Stations were closed in the
>following locations: Allegan, MI; Anchorage, AK; Belfast, ME; Douglas,
>AZ; Ferndale, WA; Grand Island, NE; Honolulu; Kingsville, TX;
>Livermore, CA; Powder Springs, GA; San Juan, PR; and Vero Beach, FL.

If you ever hear of any of the equipment from the Grand Island, NE location becoming available on the surplus market, I want to know about it. Supposedly there is a basement full of old Hallicrafters parts down there, and I would love to get my hands on them.

4661. Re: ARRL Elections a Sham, AGAIN!

Newsgroup: rec.radio.amateur.misc

Personally, I like the rule. I think it's entirely appropriate and should stay, and as long as it's there, should be enforced to the letter.

In my opinion, the ARRL definitely did the right thing. Contrary to making the election a "sham", actions like these make sure that everyone's playing by the same rules.

4663. EA RTTY CONTEST 1997 RULES

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-08 00:00:00 UTC
From: dmolejon@lander.es
Message-ID: <53eiui$3cb@lince.lander.es>
Source record: 215245

EA RTTY CONTEST 1997 RULES

Organized by "UNION DE RADIOAFICIONADOS ESPANOLES (U.R.E.)", the
EA RTTY CONTEST was created to promote activity in RTTY mode and
is opened to radio amateurs world-wide.

DATE: 1600 Z Sat. to 1600 Z Sun., April 5 - 6, 1997

MODE: RTTY-BAUDOT

BANDS: 10, 15, 20, 40 and 80 meters, according to IARU band plans.

CLASS:
a) Single operator all band.
b) single operator single band
c) Multi operator all band only
d) SWL

CALL: "CQ EA TEST"

MESSAGE: RST and CQ Zone.

EA Stations send RST, "PREFIJO PROVINCIAL" and CQ Zone.
Contacts between stations world-wide are valids. No necessary to
contact EA stations.

The spanish "Prefijos Provinciales" are:

A ALICANTE AB ALBACETE AL ALMERIA AV AVILA
B BARCELONA BA BADAJOZ BI BILBAO BU BURGOS
C LA CORU�A CA CADIZ CC CACERES CE CEUTA
CO CORDOBA CR CIUDAD REAL CS CASTELLON CU CUENCA
GC GRAN CANARIA GI GIRONA GR GRANADA GU GUADALAJARA
H HUELVA HU HUESCA J JAEN L LERIDA
LE LEON LO LOGRO�O LU LUGO M MADRID
MA MALAGA ML MELILLA MU MURCIA NA NAVARRA
O OVIEDO OR ORENSE P PALENCIA PM PALMA DE MALLORCA
PO PONTEVEDRA S SANTANDER SA SALAMANCA SE SEVILLA
SG SEGOVIA SO SORIA SS SAN SEBASTIAN T TARRAGONA
TE TERUEL TF TENERIFE TO TOLEDO V VALENCIA
VA VALLADOLID VI VITORIA Z ZARAGOZA ZA ZAMORA

POINTS: on 10, 15 and 20 meters bands, one for contact within own
continent, two for contact outside own continent. On 40 and 80
meters bands, three for contact within own continent, six for
contact outside own continent.

Contacts between stations in the same DXCC country are valid for multiplier credit, but have zero point value.

MULTIPLIERS: DXCC COUNTRIES and Spanish Provinces (PREFIJOS PROVINCIALES) on each band.

FINAL SCORE: Total points in all bands x total multipliers in all bands.

TROPHIES: Award and plate to winner in class A. Award to winners in class B), C) and D)

LOGS: Use separate log sheet for each band. Include a summary sheet showing the scoring and other essential information. Official log forms
are recommended, Mailing deadline for all entries is May10th 1997, to

EA RTTY CONTEST MANAGER
ANTONIO ALCOLADO (EA1MV)

I'm interested in hearing from anyone that is using a hazer from Glen-Martin Eng. I'm thinking of getting one of these in the spring and wonder how well they work. I'd like to hear of your setup. What size tower what you have on it and if you have had any problems and what would you do different if anything.

Thank Steve W8GAZ

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 08/2330Z OCTOBER 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 08 OCTOBER AND FORECAST FOR 09 OCTOBER - 11 OCTOBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 68/2

GOES satellite data for 07 Oct
Daily Proton Fluence >1 MeV: 2.1E+06
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 2.6E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
09 Oct 10 Oct 11 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 09 Oct: 68/2

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled

Estimated Indices : A K Observed A Index 07 Oct
Learmonth 12 2222 3343
Fredericksburg 7 4
Planetary 5 4

Observed Kp for 07 Oct: 0001 1221

2B. MAGNETIC FORECAST
Date Ap Conditions
09 Oct 7 Quiet to unsettled
10 Oct 5 Quiet
11 Oct 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
08 Oct Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST

4666. CQ Comm's Subscription Troubles?

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-08 00:00:00 UTC
From: bertb@netjava.com
Message-ID: <53eqt7$1b@news.sockets.net>
Source record: 215248

Are there other former CB_Radio subscribers here? If so are you too having trouble getting CQ Communications to honer their subscription agreement. CB_Radio went out of production, but the remainder of the subscription was to be fulfilled with the magazine "Popular Communications".

I received a notice from CQ Communications saying my subscription would expire with the December-96 issue, this even though my subscription started with the April-96 issue, even though CB_Radio was not even in production in December-95 or even January-96.

I replied by snailmail saying "BullShit, my subscription started with the .April-96 issue", Now they are saying my subscription will end with the Feb-97 issue rather than with Dec-96.

I emailed Mr Ort the editor of PopCom explaining my situation. he said he would check into it for me. He replied saying he was told my subscription expires with the Feb-97 issue, but he would send me a copy of the March-97 issue himself. I replied i didn't want any favors but what i had paid for (including the March *AND* April issues), but would now like my subscription cancelled and a refund made since they arent going to send the 12 issues they agreed to. I got a very nasty responce from Mr Ort.

I'm curious whether this is happening just to me or is a wider spread problem? /Bert

Bert Burland aka N5TOA / From The Texas Panhandle

4667. Why should we learn the code??

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-08 00:00:00 UTC
From: "Ray Hodgkiss, N9YNG" <hodgkiss@kiva.net>
Message-ID: <325ADD70.5E81@kiva.net>
Source record: 215249

It is impossible not to notice this ongoing debate about the code. There are valid arguments on both sides of the issue. CW is a mode considered outdated, so maybe it should be dropped as a requirement. I can see that point.

However, I think its important to realize that whether or not it is outdated isnt the point. People have asked why learn what is essentially another language, if they never indend to use it. I asked myself the same thing when I took german for two years in college. I thought I'ld never use it. I was wrong. I had an chance to go to Austria/Germany and it did come in handy, like when I wanted to buy a pack of cigarettes. I spoke german when there was no other way to communicate, especially when somebody didnt know english, and I really wanted a beer or a kasewurst. And I actually enjoyed it.

No other way to communiate? Thats an interesting thought. I would imagine that knowing CW would open serious doors in DXing, on all bands, when ionospheric conditions are at their worst, kind of like now.

Another intersting thought is CB and how it is today. Its a mess in general, loaded with bad operators. I know a good number of very good respectful CBers, but becasue there are so many bad apples, it is not an enjoyable aspect of the radio hobby.
The CW requirement helps keep out more of the bad apples. I recognize that just becasue you know CW doesn't mean you a "good" apple, and just becasue you dont know CW doesn't mean your a bad apple. But I think the requirement works as a filter to keep those not serious about the hobby out. Once again, I am NOT saying that just becasue you dont know the code doesn't mean you're NOT serious. I want to make this very clear.

This is my last thought. I just recieved my Master of Science. There was a no-thesis option, that I did not take. I wrote a thesis. I learned a good deal of information about research that otherwise I would have lost out on. It strikes me that people want to take the "easy way out" and gain HF privs w/o a lot of work. In regard to my peers who did opt for the no thesis option, I do not respect them any less. They made the decision best suited for them.

So I am not lectruing anybody, these are just the opinions of a no-code tech, intendning to upgrade to General ASAP.

Ray Hodgkiss, N9YNG

HURRICANE FREQUENCIES
(Unless otherwise noted, times are UTC, freq in kHz)
Revised October 1, 1996

The following high-frequency hurricane season intercepts have been gleaned from numerous sources. Times and frequencies are subject to frequent change, and are listed for reference only. This list has been published monthly during hurricane season since 1991.

If you copy this list, credit the authors. Do not remove update request and e-mail addresses. This is the only way we can keep the list updated! Thank you all who have so generously contributed information. Enjoy!

Hurricane reconnaissance aircraft (hurricane hunters) now operate primarily

on US Global High Frequency System (GHFS) frequencies. Best frequencies to

monitor are those guarded by MacDill and Ascension. After initial contact
on one of the published GHFS frequencies, listen closely for them to switch

to a non-published frequency to pass traffic. Aircraft call signs are
"GULL-nn" or "TEAL-nn" (where nn is a 2-digit number), "NOAA-42", "NOAA-43
and NOAA-49. The GULL and TEAL aircraft are based at Keesler AFB,
Biloxi, MS. The NOAA aircraft are based at MacDill AFB, Tampa, FL.

Whenever a hurricane is within 300 miles of land in the northern western
hemisphere, the Hurricane Watch Net is operational on 14325. The Hurricane

Watch Net provides communication between the National Hurricane Center and
the affected areas.

During a communications emergency, W1AW transmits special bulletins by
voice at hh:00, teleprinter at hh:15, and CW at hh:30. Frequencies are:
Voice 01855 03990 07290 14290 18160 21390 28590
Teleprinter 03625 07095 14095 18102.5 21095 28095
CW 01818 03581.5 07047.5 14047.5 18097.5 21067.5 28067.5

The National Institute of Standards and Technology broadcasts storm warn-
ings on 2.5, 5, 10, 15 & 20 MHz AM according to the following schedule:
WWV hh:08 Covers Atlantic and eastern North Pacific
WWVH hh:48 Covers Western, Eastern, Southern, and North Pacific

4669. Why arn't you an ARRL member??

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-08 00:00:00 UTC
From: wb6siv@cyberg8t.com
Message-ID: <wb6siv-0810962256350001@host69.cyberg8t.com>
Source record: 215251

The ham Poll at www.sarrio.com shown below asks a new question for the
month of October:

Why Have You Not Chosen To Join The ARRL?

Less than 1/3 of all ham radio operators are members of the ARRL. The
question for this month is
directed to those of you who are not members.

From the list of possible reasons below, select the reason that best
describes why you have not
chosen the join the ARRL.

The results:

The dues are too high. | 0
Their Ham policy positions are not close to mine.| 0
They are too closely tied to ham commercial interests. | 0
I was not treated well by one of their representatives.| 0
I just haven't gotten around to it. | 0

Stop by and vote and check out the results. 73's Ray

4670. Update: Windows Logging Freeware

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-08 00:00:00 UTC
From: M.McAmis@Valley.Net
Message-ID: <53eo8d$vmf@dartvax.dartmouth.edu>
Source record: 215252

Disappointed with your commercial/shareware logging or packet software for Windows? Try XMLog, freeware that's available on the Internet. XMLog provides a flexible set of coordinated logging and packet features.

* Version 1.25 is now available, this version has one
* change - it handles an install problem some people were
* having with incompatible versions of MSCOMM.VBX. If
* you got version 1.24 installed, you don't need 1.25.

Where to get XMLog on the Internet using a Web browser:

Try my new home page at http://franklin.ptgi.com

or...

Try the Boston Amateur Radio Club's home page at http://www.acs.oakland.edu/barc/barc.html

- scroll down to the "BARC FTP Archives" section
- click on "FTP Archive"
- scroll down to "Software Archives"
- click on "PC Files"
- click on "logging"
- scroll down and click on "xmlog125.zip"

(Even though the directory says DOS, it really is a Windows program...)

Getting XMLog on the Internet using FTP:

Sign on to ftp.barc.org with the userid of anonymous and a password of guest. Move to the /pub/hamradio/dos/logging directory and get xmlog125.zip

or...

Sign on to ftp.funet.fi with a userid of anonymous and supply your e-mail address as the password. Move to the /pub/ham/hf-log directory and get xmlog125.zip

Version 1.24/1.25 has many minor improvements - the big changes are DXCC/WAS/WAZ award submission tracking and support for the Radio Amateur Callbook (Flying Horse) CD.

If your PC only has 4mb of memory, Version 1.23 is still available at my home page or at BARC's home page (version 1.25 requires 8mb).

The archives can be busy at times, don't give up if you
can't sign on right away. Let me know if you:
- want more info
- can't fetch the file
- want a diskette instead

Have fun...

> de Darvell (KE7GW)

If you were to wait a few weeks until the current crop of Extra Gate 2
vanity requests are processed, and then query one of the updated servers
like the one at the U of Arkansas.. one that is updated daily from the
FCC's database.. then you might have a relatively good chance to getting
one that you requested on your FedEx'ed request.

But, until the current 5,000 or so applications from Extras are processed,
I'm afraid you're outta luck.. there's no way of telling, until all of the
smoke clears, which callsigns would be available when your application is
processed.

>compiled NOW.

Too late. I'm now receiving several ads per day. In fact the lastest ad tried to sell me one million email addresses. Another wanted to sell me a program that would collect 50,000 addresses off Usenet per hour. Many of the sellers are using phoney addresses so it does no good complaining to the site that appears in the "From:" line.

Many of the ads begin by saying "If you don't want to receive any more of these ads place REMOVE in the subject line." But of course, if the address is phoney that doesn't work.

I've noticed many advertisers have ceased supplying 800 telephone numbers; too bad - calling them from Hawaii many times used to be my revenge.

My "d" key is beginning to show wear...

Yes. On our planet, the FCC has been issuing "vanity" calls for several months. They just opened a GATE 2 on September 23rd for Extra-class hams. The first gate was for people to receive previously issued calls, and for folks that somehow could claim a bloodline to a deceased or expired ham callsign.

Sorry, Pete... couldn't resist :-)

On a serious note, the tongues are wagging and calling for an "investigation" on some of these recent gate 1 "snaches." NOT ME, of course :-) I haven't seen any of MY personal choices get taken yet :-)

4679. ~FCC closes down all 12 monitoring stations~

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-08 00:00:00 UTC
From: au@ix.netcom.com
Message-ID: <53ct1f$58d@dfw-ixnews11.ix.netcom.com>
Source record: 215273
Cross-posted to: rec.radio.amateur.misc,rec.radio.cb,alt.radio.pirate,rec.radio.scanner

From Mobile Radio Technology Oct '96:

"The FCC has closed all 12 of it monitoring stations. Almost all FCC field offices are equipped for monitoring frequencies at VHF and above. The monitoring stations were additionally equipped to monitor signals in the high-frequency (HF) range. Stations were closed in the following locations: Allegan, MI; Anchorage, AK; Belfast, ME; Douglas, AZ; Ferndale, WA; Grand Island, NE; Honolulu; Kingsville, TX; Livermore, CA; Powder Springs, GA; San Juan, PR; and Vero Beach, FL.

Other offices closed by the commission include those in Buffalo, NY; Norfolk, VA; Miami, Houston, Portland, OR; and St. Paul, MN.

Ok whats open?

Offices that remain in operation include Atlanta; Baltimore; Boston; Chicago; Dallas; Denver; Detroit; Kansas City, MO; L.A.; New Orleans; New York; Philadelphia; San Diego; San Francisco; Seattle; and Tampa, FL.

The FCC has previously announced that upon closing of the field offices and monitoring stations that it would have a toll-free number to report Land Mobile interference problems. 800-322-8255 "

According to this article Prior to June 1, 1996 the FCC maintained 35 field offices and monitoring stations, this number has dwindled to 16 offices.

Just thought it was an interesting piece of news to pass on to all the radio enthusiasts.

The ONLY reason why people asked your call was to determine your
Licence Class which you are still unaware of, and so interpret to you
the FCC rules which apply to you. It is only your own massive
ignorance of of the licensing rules that led you to ask your question
and prevented from understanding what information was required to
answer it. I am suprised that you found hams friendly and helpful in
the past when approached by an anonymous person sporting a cute CB
handle and concealing his claimed call sign.

So what's the problem here?? The key word is PENDING.
If the rules say that a conflict of interest is present and that
the sale of the property in question must be complete before
consideration is given, then by Mr. ruh's own admission,
he fails to qualify as the sale was still PENDING at the time
the petition was submitted. PENDING is not the same as
COMPLETED. So again, what was the problem.

Obviously, having read several of Mr. Ruh's posting, he
seem exempt from the rules, that apply to everyone else.

Gee...kinda seems like the no\pro code debates

>> >could only be restored by sending the unit back to ICOM for repair.

The ICOM radios that have the Lithium battery backed ram are the
IC-745,751,751A, 761, R71, 271, 471, 1271, M700 and M700TY
ICOM America has a Ram board that was originally programmed in 1982 and it is
still going strong. The ram only draws 1 or 2 nano amps of current and the
batteyr is able to supply 150 milliamps of current. Most will not have any
problems with the Ram board for the life of the radio.

>I might be able to get away with 2 bits if the signal waveform
>were a simple square wave,

I can only agree with this if we assume that no dithering is used (and that
the background noise level is well below one quantization step). When
dithering is used, much smaller signals can be detected at low and medium
frequencies. "Fade to noise" is a common test to check the linearity of a
CD-player. Dithered tones at -105 dB or even lower levels are detected,
while you would expect only -96 dB for the 16 bit CD-system. I don't know
how well this can be applied to I/Q demodulation, but I assume that if the
signals of interest are a few octaves below Fs/2 (say below 5 kHz), one or
two extra bits can be extracted. Some noise shaping tricks might even be
usable, but I haven't looked into it. Anyway, it is very desirable to have
18 to 24 bit DSPs to process the samples from 16 bits ADCs.

>but to recover the more complex waveform
>of QPSK, I need more bits. 4 may do, but 8 works lots better.

If you want to tranfer 28.8 kbit/s through a 3 kHz channel (e.g. ordinary
phone modems) then 8 bits certainly makes sense. However, when transfering 2
bits/symbol in QPSK even 4 bits sounds quite a lot, particulary if the
sampling frequency Fs is a few octaves above the tones of interest, when
some extra resolution can be obtained from the dithering effects of band
and/or equipment noise.

>So a 2 bit span reduces the usable dynamic range by 12 db, 4 bits
>by 24 db, and 8 bits by 48 db.

Yes, the minimum _usable_ signal must be greater than the quantization step
by several dBs and several tens of dBs for extremely complex waveforms.

This is nitpicking, but the dynamic range for analogue receivers are usually defined between strong off channel signal(s) and the noise floor (which depends on the detection bandwidth). The ratio is not between strong signal(s) and a usable signal.

>Note, the A/D can *handle* a wider span than that, but if my
>desired signal plus other passband crud gets within 4 bits of
>either limit, it clips, and I can't process it properly.

You must have quite a few strong undesired signals in the ADC pass-band in order to get the peak voltages aligned at the same time to have the signal clipped with 24 dB headroom. To completely avoid clipping in a two tone IMD test, each tone must be 6 dB below full scale.

>So
>that effectively reduces my dynamic range by 8 bits, or 48 db.
>Or stated another way, the sum of my signal and channel crud
>has to stay 24 db below the all 1s condition and my signal
>has to be 24 db above the quantization limit, IE all 0s. Of
>course both limits don't occur at the same time, so perhaps
>you could say I have 72 db of dynamic range with the current
>setup. I don't think that's the proper way to look at it
>though.

This is of course true that the usable range is less than the converter range, but maybe we should call the usable range something else than dynamic range to be more consistent with terms used with analogue equipment.

<about 24 bit ADC deleted>
>
>The brickwall filters do reduce signals which are more than
>+/- 20 kHz from the desired signal, but that isn't a great help
>at HF where signals sit cheek by jowl. I need to be able to work
>closer than that to a strong signal. I want to be able to work
>with signals on 1 kHz channel centers at the dynamic signal
>extremes.

You also have to consider the phase noise characteristics of both the transmitters and receivers.

Of course if you are participating in a multi-multi contest with multiple transmitters (>1 kW) on the same premises and on the same band or have a neighbour within a few blocks operating at the same band at 1 kW, you definitely need 24 bits. Some free space loss calculations (assuming far field propagation) are quite interesting in this case.

If you are only dealing with signal comming via the ionosphere, the required dynamic range is much less.

Using similar dynamic range test mehods, the 16 bit ADC would be slightly worse than some mobile HF rigs, but a 20 bit ADC would be superior to the most expensive HF ham rigs.

<about the current 16 bit ADC system>

>requirements for anti-aliasing aren't as severe as they might
>appear at first, IE the anti-aliasing rejection is 93 db in
>the current setup. But that doesn't do much close in.

I do not quite follow in this calculation. Using 64x oversampling, there are 6 octaves between half of the final sample rate (Fs/2) and half the oversampling rate (Fos/2), where you have to fit the slope of the low pass filter. However, since the alias components just above Fos/2 fall high above the audio range, the slope of the filter can extend up to Fos - 20kHz and thus, the slope can be nearly 7 octaves long. With 12 dB/octave, the alias components from Fos-20kHz to Fos are only attenuated by 84 dB, which is not quite sufficient for a 16 bit converter. An additional 6 dB/octave LPF at say 100 kHz would do the trick without adverse effects in the audio pass band.

>course!

Ramon, I certainly agree with this. In fact I'd like to encourage
real ragchewing, IE getting to know the other fellow, as something
we should do more of. That's one of the reasons I rattle on about
throughput. If the mode you're using doesn't have much throughput,
you can't exchange much information in the duration available for a
contact, and thus you really don't get much chance to get to know
the other fellow.

I really don't know why some hams seem so opposed to increasing
throughput. No matter what our communications objective, the more
throughput we have the better we can accomplish it. The only
reason I can think of for not wanting good throughput is that
you don't want to engage in real communications with another
person, but want to emit RF and occupy spectrum for a number
of hours anyway, and that seems so pointless.

Cross-posted to: news.announce.newgroups,news.groups,rec.radio.amateur.misc

RESULT
unmoderated group rec.radio.amateur.boatanchors passes 277:31

There were 277 YES votes and 31 NO votes, for a total of 308 valid votes. There was 1 abstention and 10 invalid ballots.

For a group to pass, YES votes must be at least 2/3 of all valid (YES and NO) votes. There must also be at least 100 more YES votes than NO votes.

A five day discussion period follows this announcement. If no serious allegations of voting irregularities are raised, the moderator of news.announce.newgroups will create the group shortly thereafter.

Newsgroups line:
rec.radio.amateur.boatanchors Vacuum tube-based amateur radio equipment.

Voting closed at 23:59:59 UTC, 7 Oct 1996.

This vote was conducted by a neutral third party. Questions about this proposal should be directed to the proponent.

Proponent: Rick Stealey <rstealey@attmail.com>
Votetaker: Dave Cornejo <dave@dogwood.com>

RATIONALE: rec.radio.amateur.boatanchors

The term "Boatanchors" refers to equipment (more than 25 years old) used by amateur radio operators ("hams"). The term is used by hams to describe equipment which they are particularly fond of, usually for nostalgic reasons. All over the world, in daily conversations on the air, hams lovingly refer to old gear they are operating as their "favorite boatanchor rig". Ususally such discussions involve locating, restoring, collecting, and finding parts for, old ham radio equipment. A boatanchor may have been home built, military, or once produced by a manufacturer long since out of business. In order to have a Usenet forum for similar discussions, rec.radio.amateur.boatanchors is proposed.

The term "boatanchor" may not, at first, be descriptive to a person who is not a ham. Every hobby has terms that are specific to that particular hobby. Baseball has "dugouts", golf has a "wood", and an "iron", and British cars have "bonnets". Within amateur radio, working other stations at long distances could never possibly be referred to as anything other than "DX". It has been that way for 80

years. Low power operating, likewize, is ONLY known as operating QRP. In a similar manner, old rigs are referred to the world over by hams as "boatanchors".

There is increasing interest in boatanchor equipment by hams. Currently boatanchor discussions are held in rec.radio.misc. A large variety of specialized topics relating to boatanchor collecting (see charter) substantiate the need for the proposed new newsgroup. During the pre-RFD discussion phase there was a substantial amount of interest in the newsgroup name (over 100 articles). During the RFD period, discussion concentrated on the charter, and topics to be included in the newsgroup. Both discussions indicate a great need for and interest in the subject newsgroup.

CHARTER: rec.radio.amateur.boatanchors

The newsgroup, rec.radio.amateur.boatanchors, is primarily for discussions of topics related to classic amateur radio gear. Participation by others who are not licensed radio amateurs are also welcome.

EQUIPMENT.
Appropriate equipment of the boatanchor category includes:
- equipment constructed primarily with vacuum tubes, not solid state devices, and manufactured generally in the post WW II-to-1970 timeframe.
- transmitters (amateur, military, home made)
- receivers (amateur, SWL, military, home made)
- station accessories (keys, bugs, microphones)
- test equipment from the boatanchor era used in the repair and restoration of boatanchors, such as scopes, af and rf generators, meters of all kinds, etc.)
- parts and techniques used in construction of boatanchors (vacuum tubes, condensers, etc.)

TOPICS.
Topics regarding the above equipment built entirely or primarily with vacuum tubes (as opposed to solid state devices) are welcomed in this newsgroup. Suitable boatanchor topics may include:
- collecting
- modifying
- tuning
- obtaining parts (specific requests for parts/equipment are permitted)
- manuals and TM (tech manuals) copies exchange
- restoration and refinishing
- values of boatanchor gear
- sources for parts
- questions and advice for others
- Morse Code operation - advice, legends and lore
- Modes of operation: CW, AM, early SSB
- manufacturing during the boatanchor era, including companies, personalities, and manufacturing techniques

- design and engineering history of equipment of the boatanchor era
and comparisons to prior technology (arc- and spark-gap transmitters,
Alexanderson alternators, galena detectors, magnetrons, Nixies,
quartz crystals).
- other subjects of a historical nature
- commercial postings, if SPECIFICALLY offering products and services
DIRECTLY relating to boatanchor collecting.

OFF CHARTER TOPICS.
The following subjects are off topic in this newsgroup:
- discussions of hi-fi, stereo, and/or broadcast receivers. (use
rec.antiques.radio+phono and rec.audio.tubes newsgroups)
- antique equipment (use rec.antiques.radio+phono)
- entertainment television receivers
- cross postings from rec.radio.swap
- discussions that are more appropriately held in other rec.radio.amateur
newsgroups, such as code vs no-code
- off-topic commercial postings are specifically prohibited from the
newsgroup

FAQ.
- A list of Frequently Asked Questions will be developed by volunteers
in the newsgroup and will be posted monthly. This FAQ will be helpful
to beginers as well as first time visitors to the newsgroup. The FAQ
will contain a list of commercial vendors who specialize in products and
services of value to boatanchor collectors.

END CHARTER.

DISTRIBUTION:

This CFV has been cross-posted to:

rec.radio.amateur.misc

Pointers to the CFV will be posted in these newsgroups:

Yes indeed, Hans!

W1YK = Worcester Polytech Wireless Assn
W5YD = Mississippi State Univ ARC
W5YG = Rice Univ ARC
W5YM = Univ of Arkansas ARC
W6YX = Stanford ARC
W7YH = Washington State Univ ARC
W8YX = Univ of Cincinnati ARC
W8YY = Michigan Tech Univ - Husky ARC
W9YB = Perdue ARC
W9YH = Univ of Illinois, Synton ARC
W9YT = Univ of Wisconsin - Badger ARC
W0YI = Iowa State Campus RC

I'm sure there must be more. Next time I'm over at the W8YX station
I'll have a look at the QSL collection to see if I've missed any good
ones.

: Perhaps all Burt follow-ups could start with a "B:" in the title.
: Then all those not interested could easily avoid them. Perhaps you already
: are filtering your news or mail from Burt, but this could help with the
: follow-ups.

I've been thinking about this for a long time. Burt's been in more
killfiles than "MAKE MONEY FAST" and "$50,000."

I would suggest Burt follow-ups use the WORD "Burt" as I have that and
his call in my killfile and it works great.

Cross-posted to: alt.radio.scanner,rec.radio.amateur.misc,rec.radio.scanner,rec.radio.swap

There's over 30 states available FREE right now!

Yup...you read it right, FREE.

Check it out today at:

http://www.oz.net/~gmcavoy/index.html

We've got a 5 meg limit on WWW space for this project.
We're NOT askin' for money here! However, a lot of folks
have been generous with their web space (most ISPs give you
5 megs for a web page whether you use it or not...) and we've
therefore been able to put up more states at once. So, if you
don't see the state data you want...you can either just be patient
or drop us a bit of email offering web space and we'll talk about
setting you up as an href link for your state database.

Questions/Comments...email us.

: 807!!

Well, Mr. Neslon, you are listed in the FCC database as a Tech+, this gives you 400khz on 10 meters with 28.100 to 28.300 for CW, RTTY, and data and 28.300 to 28.500 for CW and SSB. Also, I think your service provider has a lot more information available to the public than you realize.

In my opinion you were not "berated with demands for explanations" just a clarification of what information you were looking to find. I also think that "friendly and helpful" is largely in the eye of the beholder.

Bye for now, Frank Sved (VE3GID) at dg198@freenet.carleton.ca

4704. 100's of Ham Classifieds--> http://www.sarrio.com

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-08 00:00:00 UTC
From: wb6siv@cyberg8t.com
Message-ID: <wb6siv-0810960752000001@host30.cyberg8t.com>
Source record: 215298

The Raymond Sarrio Company's Ham Radio WWW site has a very large data base of ham radio classified ads. ALL LESS THAN 30 DAYS OLD! at:

http://www.sarrio.com.

This new classified section allows Hams to search for equipement with the help of our new and unique search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear your interested in, each listing comes with point-and-click e-mail access direct to the Ham that listed the item.

For those Hams with gear to sell, take note! It is absolutely FREE to list your equipment within the Ham Classifieds, and there will be no posting time delays.Your posting will go on-line, in our classified search engine,in about 1 hour. All you need do is fill out a simple forms page, and upon its (point-and-click) submission, your "For Sale" advertisement is on-line.

I will be purging the classified listing initially about once every month, but that timeline will shorten as our classified numbers go up. Give it a try, and let me know how you like it. 73's Ray
--
The Raymond Sarrio Co. a full feature Ham Radio Storefront on tth WWW at http://www.csz.com/sarrio in association with Brillar Enterprises http://win-win.com/brillar an Extensive Discount CD-Rom Catalog!

I've read a little bit about these techniques, Paul, but I don't
yet know how to implement them sensibly. I'm still learning this
DSP stuff so I tend to take a straight forward brute force view.
The effective sample rate is 44 kHz and the signals of interest
fall in the 300-3000 Hz range (actually only a subset of that
range). If I understand what you're telling me, I can get an
effective 18-bit resolution out of the 16-bit A/D by dithering,
and that I can let the noise do the dithering for me. I'm not sure
I know how to take advantage of that (in fact I'm quite sure I
don't know how to implement that in detail on the system I've
got). If you have suggested reading, I'm interested.

>>but to recover the more complex waveform

>particulary if the sampling frequency Fs is a few octaves above the
>tones of interest, when some extra resolution can be obtained from the
>dithering effects of band and/or equipment noise.

The only way I know to do I/Q demodulation is to make a final decision based on the results of two level decisions on each axis, and zero is disallowed (because it would represent no signal). Seems to me I need a very minimum of 3-bit samples on each axis, 4-bits are better. When I take into account interference and noise, I think I need better resolution than that. I'm allowing the decision to be somewhat "soft" to account for corruption of the signal. Perhaps that's the wrong term. What I'm actually doing is insisting on some "dead band" or hysterisis between the decision points. I don't want to decide between adjacent digits. That leaves no slop for corruption of the signal by fading or noise bursts. That's why I want the signal to have an 8-bit span. Perhaps that's naive, but at least I know how to code it.

>>So a 2 bit span reduces the usable dynamic range by 12 db, 4 bits
>>by 24 db, and 8 bits by 48 db.
>
>Yes, the minimum _usable_ signal must be greater than the quantization

Okay, so what I'm calling dynamic range isn't what analog receiver makers mean by the term. Their usage of the term isn't useful to me in this context. Perhaps for comparison purposes I should choose a different term for what I'm talking about.

>>Note, the A/D can *handle* a wider span than that, but if my

>scale.

I'm using CB Ch 19 as my interference source. The dynamics of that channel are *fierce*. I'm using a passive adder to combine that interference source with my test signal. There's no problem whatsoever in getting peaks of several signals to combine constructively from time to time (and also destructively from time to time also). That gives me a very wide peak to peak range of interference sources.

This isn't like a couple of steady tones, this stuff is very dynamic
and complex, IE picture several hundred overmodulated AM signals
all keying over each other, some very nearby, some far away, and
a lot of them pushed through Class C amplifiers of several hundred
watts. That's CB Ch 19. I figure if my system can work against
that, it'll be plenty robust for use in the ham bands.

I'm open to suggestion for the proper term.

><about 24 bit ADC deleted>
>
>You also have to consider the phase noise characteristics of both the

I've got a good handle on that. Right now I'm using a very clean
signal generator as the LO for both receiver and transmitter.
That virtually eliminates phase noise as a consideration in the
test rig.

Interesting. I'm not sure I agree :-), but interesting. I know
for sure my system doesn't have the dynamic range (the way I use
that term) of my IC735 with the 16-bit A/D I'm using.

Well, 93 db is what I measure. I suppose that the response of the
codec may be falling off up toward the top of the range, so that's
adding to the RC brickwall I'm using externally. Or perhaps my
measurement technique is faulty. This is a bit harder to measure
than I thought at first. The codec is stereo, and there appears
to be some crosstalk between the channels. I don't know exactly
how to factor that out. I've been trying to ignore it, figuring
it'll go away when I move to separate A/D systems for I and Q.
(It's about 80 db down, but that makes measurements of stuff
further down than that confusing.)

It is a pity, and I agree having been in the same spot myself. But,
it is a fact of life and I do not see what can be done about it.

It can actually be lived with as long as some inconsiderate guy
does not break into the QSO and say "hurry up and finish your
QSO so the rest of us can work you!"

A very effective solution is to use a foreign language. When I use
Spanish on SSB, and i.d. my station in Spanish or some other
language, it seems that the hordes did not descend upon me.
Unfortunately, this only works DX to DX QSO. Once, talking from
Alaska to a hispanic guy in California, using spanish, some
idiot broke up the QSO and said "Use english, you idiots, this is
the AMERICAN phone band!"

So I went back to CW, where people are much more polite.

Remind your friend that "9CWN" was issued before international
agreements
were made in 1934. And if he had kept his call back then he would have
been "W9CWN". Back then there were quite a few "9CWN"s all over the
world
but in 1934 they realized that prefixed were needed to tell which
country.

>I might be able to get away with 2 bits if the signal waveform
>were a simple square wave,

I can only agree with this if we assume that no dithering is used (and
that the background noise level is well below one quantization step).
When dithering is used, much smaller signals can be detected at low
and medium frequencies. "Fade to noise" is a common test to check the
linearity of a CD-player. Dithered tones at -105 dB or even lower
levels are detected, while you would expect only -96 dB for the 16 bit
CD-system. I don't know how well this can be applied to I/Q
demodulation, but I assume that if the signals of interest are a few
octaves below Fs/2 (say below 5 kHz), one or two extra bits can be
extracted. Some noise shaping tricks might even be usable, but I
haven't looked into it. Anyway, it is very desirable to have 18 to 24
bit DSPs to process the samples from 16 bits ADCs.

>but to recover the more complex waveform
>of QPSK, I need more bits. 4 may do, but 8 works lots better.

If you want to tranfer 28.8 kbit/s through a 3 kHz channel (e.g.
ordinary phone modems) then 8 bits certainly makes sense. However,
when transfering 2 bits/symbol in QPSK even 4 bits sounds quite a lot,
particulary if the sampling frequency Fs is a few octaves above the
tones of interest, when some extra resolution can be obtained from the
dithering effects of band and/or equipment noise.

>So a 2 bit span reduces the usable dynamic range by 12 db, 4 bits
>by 24 db, and 8 bits by 48 db.

Yes, the minimum _usable_ signal must be greater than the quantization
step by several dBs and several tens of dBs for extremely complex
waveforms.

This is nitpicking, but the dynamic range for analogue receivers are usually defined between strong off channel signal(s) and the noise floor (which depends on the detection bandwidth). The ratio is not between strong signal(s) and a usable signal.

>Note, the A/D can *handle* a wider span than that, but if my
>desired signal plus other passband crud gets within 4 bits of
>either limit, it clips, and I can't process it properly.

You must have quite a few strong undesired signals in the ADC pass-band in order to get the peak voltages aligned at the same time to have the signal clipped with 24 dB headroom. To completely avoid clipping in a two tone IMD test, each tone must be 6 dB below full scale.

>So
>that effectively reduces my dynamic range by 8 bits, or 48 db.
>Or stated another way, the sum of my signal and channel crud
>has to stay 24 db below the all 1s condition and my signal

>though.

This is of course true that the usable range is less than the converter range, but maybe we should call the usable range something else than dynamic range to be more consistent with terms used with analogue equipment.

<about 24 bit ADC deleted>
>
>The brickwall filters do reduce signals which are more than
>+/- 20 kHz from the desired signal, but that isn't a great help
>at HF where signals sit cheek by jowl. I need to be able to work
>closer than that to a strong signal. I want to be able to work
>with signals on 1 kHz channel centers at the dynamic signal
>extremes.

You also have to consider the phase noise characteristics of both the transmitters and receivers.

Of course if you are participating in a multi-multi contest with multiple transmitters (>1 kW) on the same premises and on the same band or have a neighbour within a few blocks operating at the same band at 1 kW, you definitely need 24 bits. Some free space loss calculations (assuming far field propagation) are quite interesting in this case.

If you are only dealing with signal comming via the ionosphere, the required dynamic range is much less.

Using similar dynamic range test mehods, the 16 bit ADC would be slightly worse than some mobile HF rigs, but a 20 bit ADC would be

superior to the most expensive HF ham rigs.

I do not quite follow in this calculation. Using 64x oversampling, there are 6 octaves between half of the final sample rate (Fs/2) and half the oversampling rate (Fos/2), where you have to fit the slope of the low pass filter. However, since the alias components just above Fos/2 fall high above the audio range, the slope of the filter can extend up to Fos - 20kHz and thus, the slope can be nearly 7 octaves long. With 12 dB/octave, the alias components from Fos-20kHz to Fos are only attenuated by 84 dB, which is not quite sufficient for a 16 bit converter. An additional 6 dB/octave LPF at say 100 kHz would do the trick without adverse effects in the audio pass band.

You mention in a reply that the battery can be changed in the field to prevent a problem..... can this be done with the r71a? If so, how do you go about keeping power to the circuit while you change the battery?... do you mean change it with the power on? or to you mean I should bridge the present battery with a secondary battery (observing polarity) while it is changed then remove the secondary battery?

I would really appreciate you help on this since I recently purchased an r71a and have no idea how old it is or what shape the battery is in. I would like to replace it before it goes dead.

Thanks very much

A list of U.S. sections appears on page 12 of October QST. (I think
it's on page 12 of *every* QST) Unfortunately, VE sections are indeed
missing.

Unfortunately, contest results may be the victim of a struggle within
the ARRL. Quite a few members have been upset about what they view as
too much space being devoted to contests; to be honest, you two are
the first I've seen complain about *not enough* space. (it happens I
agree with you, but I think we're a minority)

Dennis A. Mason
damason@uswc.uswest.com

(I agree with every word, but he was too mild-Burt K1OIK).

You ham radio ops are a bunch of cheap skates. You're always trying to screw us commercial dealers out of a radio or repeater for some stupid project of your own. Most of your repeaters are all closed and are absolutely worthless for emergency use. You all claim to be such a big help in emergencies. WELL YOU'RE NOT!!! Hams can't and don't contribute anything to disaster relief any more.

All you do is whine and moan about how much a piece od commercial equipment costs. Well that isn't entirely true. You do go to hamfests and whine and moan to vendors about how much their equipment costs as well. You idiots have absolutely no idea what goes into the design production and marketing of any piece of gear, commercial or not. I truely feel sorry for any poor bastard that relies on making a living from you cheap SOB's.

Why not give us legitimate commercial interests your VHF, UHF and SHF spectrum so that we can do something useful for mankind instead of letting a bunch of retired has beens have access to billions of dollars of spectrum for nothing more than comparing prostate troubles during the day when the rest of humanity is doing something useful... like working for a living.

I'm sure to get some flame mail over this so I might as well make it good... You guys are worse than CBers. All you do is bitch about code requirements and how hard the tests are to get a license. Well I got news for you. You hams should be relegated to about 400 KHZ of spectrum in the 20 meter band. It should be allocated into 40 distinct channels 10 KHX apart. Maximum power 5 watts ERP. All testing and call signs should be revoked and every 18 wheeler should have a mass production, $50 20 meter ham rig installed. Then I suppose you all could bitch about paying a whole $50 to whoever is desperate enough to get into that market.

73zzzzz good buddies>>>

Most hams are lily white because the whites do not accept the blacks.
It is not because of any black problem. It is a white problem.

4735. Is equipment building and repair a lost art? Your comments, please.

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-09 00:00:00 UTC
From: rdb <rdb@wko.com>
Message-ID: <53f8km$oq6@news.wko.com>
Source record: 215087
Cross-posted to: rec.radio.amateur.homebrew,,rec.radio.amateur.misc

30 years ago, I was enamored by the prospect of soldering together a handful of components and ending up with a functional transmitter, receiver or some other magical electronic device. For me that love has yet to fade. Recently while discussing the world of homebrew with a ham friend, he challenged me to show proof that there is still a viable audience out there in the world of hamdom for material that introduces hams to the how and why of equipment construction and repair. Now since this is a subject that's near and dear to my heart (I think proof of ownership of a soldering iron and signal generator should be required to obtain a ham ticket - please don't flame me for that opinion), I naturally assumed the thing I like most about ham radio is popular with most other hams. After considerable thought, I'm not so sure. An unscientific survey of our local club, 40+ members, reveals that fewer than five do any work at all on their own equipment,much less any homebrew work! Checks with hams in other area clubs reveal a similar percentage of hams who still heat a soldering iron on a semi-regular basis. Blame unrepairable micro-miniature equipment, the impossibility of homebrewing gear that can compete cost or feature wise with the factory-built stuff, lazy hams or whatever you like. My question is this: Are we who enjoy the technical aspects of the hobby headed for extinction? What do you think?

Not much sympathy coming from the net, Randy. You screwed up... you trusted the government.

Pretty funny in a bizzaro-world way, most people flame the USPO for being too slow, here they did a good job and got your hot package delivered quickly and you go ballistic.

That 32 cent stamp didn't sound like such a deal to me. I'd use that electronic filing method ASAP, there were 4,200 applications on day one but only a few hundred since, you really are not that far out of the running. You can kiss off a few of the hot w#-- calls but I bet there will be tons of N#yx and stuff like those left after the first wave!

That's what everyone else will have to do if we don't get pulled on the day one lottery, think of of this way, you have first shot at the Vanity call boomerang!

Burt, I really don't understand why you love to be hated? It really doesn't trouble me not to know, I'm just curious. Without MUD flinging, people in other groups call you reallllllly bad names and make fun of you by calling you a "clueless twinkie".

Why not just relax. The world is full of diversity, enjoy it. Certainly if you are teaching a vocational programme you should be aware that your students don't require a maverick, just a decent, honest person.

>halt the processing of this entire charade today. I'm dead serious
>== ----------------

The rules are very clear. You jumped the gun, and like a "sooner"
at a land rush, now you're paying the price. If you think a court
is going to issue an injunction because the US Postal Servce is
too efficient, you'll be laughed out of court.

The procedure required by the FCC is the same one that commercial
competitive filings have had to follow for years. The FCC will slap
down AT&T just as quickly as they did you, if AT&T were careless
enough to jump the gun on a filing gate.

What you don't know, and what the postal worker you spoke with
may not know either, is that the postal service has started using
bulk air transport for first class mail between mail centers more
than 500 miles apart. So 2 day delivery of transcontinental *surface*
mail is now commonplace. (They don't tell you that because they want
you to still pay the premium for airmail delivery.) The old mail
trains that took a week to get the mail across the country are gone.
It is now common for a transcontinental letter to arrive before a
letter mailed from a nearby post office.

Bulk mailers know all about this and stagger their mailings when
they want them all to be delivered on the same day. Postal workers
may not know this since they're trained on their little piece of
the puzzle and not on the entire system. And those who were trained
on the entire system years ago have out of date knowledge. If you
had consulted a commercial mailer, they could have arranged to have
the letter delivered on the day you specified.

The commercial boys have long learned that the best way to deal
with filing gates is to have a flunkie from their Washington
communications attorney's office wait in line to hand deliver
any application that they might want to file at a specific
time.

I'm somewhat surprised the ARRL didn't offer to do this. They
deal in bulk mail and understand the postal system. And they
have a flunkie in Washington who could have handled standing
in line with a few bags of applications for the first day
filing.

In any event, ignorance of the way the mail works is no excuse.
When you deal with the government, you play by their rules or
you don't play. You'll just have to resubmit your application.

au@ix.netcom.com(au) whistled a happy tune like:

|>From Mobile Radio Technology Oct '96:

|>"The FCC has closed all 12 of it monitoring stations. Almost all FCC
|>field offices are equipped for monitoring frequencies at VHF and above.
|>The monitoring stations were additionally equipped to monitor signals
|>in the high-frequency (HF) range. Stations were closed in the
|>following locations: Allegan, MI; Anchorage, AK; Belfast, ME; Douglas,
|>AZ; Ferndale, WA; Grand Island, NE; Honolulu; Kingsville, TX;
|>Livermore, CA; Powder Springs, GA; San Juan, PR; and Vero Beach, FL.

|>Other offices closed by the commission include those in Buffalo, NY;
|>Norfolk, VA; Miami, Houston, Portland, OR; and St. Paul, MN.

|>Ok whats open?

|>Offices that remain in operation include Atlanta; Baltimore; Boston;
|>Chicago; Dallas; Denver; Detroit; Kansas City, MO; L.A.; New Orleans;
|>New York; Philadelphia; San Diego; San Francisco; Seattle; and Tampa,
|>FL.

|>The FCC has previously announced that upon closing of the field offices
|>and monitoring stations that it would have a toll-free number to report
|>Land Mobile interference problems. 800-322-8255 "

|>According to this article Prior to June 1, 1996 the FCC maintained 35
|>field offices and monitoring stations, this number has dwindled to 16
|>offices.

|>Just thought it was an interesting piece of news to pass on to all the
|>radio enthusiasts.

|>au

THIS can only be good news to SW pirates / free radio enthusiasts.
As long as they are not interfering with other services, I seriously doubt
that the FCC is going to bother ANYONE on HF with a moderately powered
signal that does not GRAB the whole world's attention.

I tried to contact the FCC monitoring station in Laurel, MD a few months ago
about a deliberate interference problem I heard on the ham bands.

They ignored my FAX.
They didn't return my phone call messages.

If there IS anyone left in FCC monitoring, they are likely too busy with commercial work to want to fool with SW and FM band pirates.

Happy listening!

Bry

Well, I guess you can count me amongst the doomed! While I do own a few "riceboxes" only one of them (a 2M HT) was bought new. All the rest were good deals because they had something wrong with them. Fix them up, and I'm a happy ham! (and a cheap SOB) The most recent was a 2 meter rig that was given up for dead because the mic cord was too long! (i.e. broken solder joint, shorten cord, resolder) I've been melting solder for much longer that I've been a ham, and I guess it just sort of carried over. I'm building QRP rigs now, made my practice oscillator out of parts from a toasted computer monintor, have electronic "carcasses" all over the basement just "in case" I might need the parts. Tough to explain to the YL.

I think most amateurs are content to be appliance operators and I have no problem with that. It is now much more of a hobby than a service, so whatever people enjoy doing with radio, they should do. Not that I don't lament the demise of the homebrewer. It's nice to run into one once in a while and not be stared at when you say something like, "Have you seen the spec's on the new low power 602's?".

Seems that anywhere the "suits" can make money, homebrewing starts to die off. Just look at what the no code tech licence did for big three in terms of two meter offerings. Before I get flames "I SEE NO-CODE AS A GOOD THING". Most all of the builders I meet anymore are into QRP or microwave since there isn't much chance you can outdo a mass produced HF rig and there are very few commercial offerings for QRP or uwave. Both appliance operators and homebrewers have their place, but I for one am much happier being one of the homebrewing dinosaurs.

Randolph,

Get a grip on yourself! The more you blither and damn the FCC and the Post Office the worse you look. The whole affair boils down to mailing an important letter too soon, and the Post Office delivering faster than you expected. Why criticize the Post Office for being prompt? It turns out that you mailed the 610-V, and later asked when it would get there. You knew then that you were pushing your luck. Your post is full of rude remarks about the FCC and the Mellon Bank, who are following guidelines published in advance. Now you'd like to get the courts involved to halt the process, so your re-application will rank with the rest? <snicker>

I'm sorry to sound so unsympathetic, I understand what you're going through. But try to think things through before shooting yourself in the foot again! Now you should wait to see what's available after the first day call rush, and file electronically. If you file right away, the odds are very much against you.

-'claim' that it was received 'too early'.
- I sent my application at 5:30 p.m. on wednesday the 18th. at a
-mailbox in front of my Post Office in Berkeley.

OK. You used a service that makes *no* guarantees about how long it will take to process. In an unusual burst of speed, they actually got the mail through in a tad under 2 days. And most people complain how slow they are.

If you checked the newsgroups and mailing lists, you would have noticed many recommendations for how to send the 610-V in: FedEx/UPS/Express mail on friday with a saturday delivery and no signature required was the general consensus. If getting in on the first day was so important, the extra $10 for the postage was well worth it.

- Here is what I am proposing: Get a court ordered injunction to
- ------------------------- ================================
-halt the processing of this entire charade today.

Because you didn't follow the publicised rules? It was *VERY* clear that early submissions would get turned down. As a matter of fact, early on (before someone realized that it was on a Monday), everyone thought they had to have it show up *ON 9/23 EXACTLY*. There was an over 3 day window to hit for gate 1...

I guess I could add that getting on the microwaves still requires homebrewing
in almost all cases. There is very little commercial gear available that is
intended for ham usage above 1.3 GHz. Compounding the lack of commercial gear
is the difficulty in getting test equipment inexpensively. As a beginning micro-
wave builder/operator, I'm finding the experience very similar to when I
first started in ham radio in 1971, when I built my first gear and was
not easily able to verify that anything worked. The best resources I've found
are other hams in the same area (I'm grateful for that!) who already have
gotten _their_ homebrew gear on the air. If you're willing to try several
hundred mile QSOs on milliwatt power levels with gear you build yourself and
carry around in your car, microwaves might be the ticket to the homebrew itch...

> Roger,WF4N

Hi Roger,

I still repair all my equipment, including the solid state stuff. I also still homebrew and experiment. It remains as much fun as it always was, perhaps even more, with solid state gear and qrp projects. We need to do more club projects, teach classes in our clubs and talk it up. Your post is a good start, and I hope a large number resolve, as I am, to become more active in getting others "hooked" on building, experimenting with, and repairing, equipment. One method would be for clubs to pool their resources and set up work areas so hams can experiment, test and do repairs.

I hope others will come up with more ideas, and will begin working through their local clubs to stimulate interest and encourage hams to put their theory to practical use.

Thanks for the stimulus!

73,
Jim - AD4VL

FWIW:

I peddle pieces/parts at hamfests. I notice that I have as many "young" customers as I do "old" customers.

As to the cause of the demise of "technically qualified" hams, I can suggest several reasons, most of which have already been posted. But, maybe the primary reason is the disappearance of Elmers, those "old timers" who took the time to tutor and coach newcomers to this hobby. Today, one studies a bit, memorizes some answers, passes the test, buys a HT, and becomes an instant ham. I am not critical of that approach to licensing but I do realize that it creates a different breed of ham.

I still tinker, repair, and brew a bit. And, I try to convince newcomers that there is some fun associated with such activities. While I can't claim to be an instant success, I have seen some of the new folks try.

We bought a Hazer for our club to use on Field Day. It works great. We use it on Rohn 55 tower sections and normally put it up about 30 feet on FD. The difficulty with a Hazer comes when you are using a tall guyed tower. Obviously you cannot pass through the guy wires with the antenna on. You have to disconnect the guys as Hazer goes past. There are guys attached directly to the Hazer so when it is all the way up, these guys hold the top of the tower. On FD these are the only guys we use so there is no problem going up or down. We have tethers on the tower to hold it until the Hazer gets in place. I also use a Hazer on 2 sections of Rohn 55 on top of my 2 story house. The only guys are on the Hazer and this also works great. When I bring the antenna down to work on it, I attach tethers to the tower to hold it in place. If you haven't called Glen Martin Eng, give them a call and have them send you there installation booklet. It will give you a good idea of how the system works. We bought the galvanized unit and it is constructed very well and it does the job we need. I did spend a bunch of time talking directly to them at Dayton prior to purchasing to make sure it would fit our need. Hope this helps.

There was an article in Pop Comm last month about this. Said that the number of SW pirates has skyrocketed over the past several months. Main reason was the FCC's lack of enforcement. It also talked about a low-cost SW transmitter that's being mass-produced now ("The Grenade") which allows operation from anywhere with a good, strong signal as well as easy setup.

Gentlemen:

I am a 33 year veteran of ham radio and have held an Amateur Extra Class License for many years so I guess you could say that I have a know code license. Both times when the no code license proposals came up before the FCC I filed comments in opposition to the creation of such a license. But when a no code technician class license was finally adopted, my attitude was this: "It is now the law of the land and it is up to us to make it work."

I was heading up the VE operations of my local radio club and so I saw first hand just what the no code license brought into ham radio in the way of applicants. I was, in general, quite impressed with the quality of the applicants that I was seeing. Sure, in any crowd there are a few bad apples but ham radio already had "bad apples." If you don't believe me, just listen to 14.313 MHz or 3.8945 MHz. The persons involved in the escapades on these frequencies are for the most part Extra Class.

Back in the early days of radio a code test was unnecessary because that was the only means of communications available so it was learn the code or not be involved. Later, the primary justification for ham radio was "training" so code testing became important so ham radio could fulfill its mission and provide trained telegraphers to the military, the government, and private industry.

Now, the military and the government have abandoned CW. The Department of Defense has even banned CW on MARS frequencies as of October 1, 1996. GMDSS has all but eliminated CW from the high seas. The US Coast Guard no longer even monitors the international CW distress frequency, 500 KHz. Now the only places where one finds CW in use is automated satellite IDers, automated IDers in the private land mobile service (when they are even used), airport NDBs (and the pilots don't know morse code, they have books with the dots and dashes written out for them), and ham radio.

The face is that now Morse code is nothing but a dead relic. Sure, there are some who still enjoy it. I even spend some time using it. I am particularly fond of the 160 meter CW contest. But as a testing requirement, it's day should be over.

I realize that this will take a change in ITU regulations but I expect this to come about soon, by 1999 at the latest. As soon as the ITU drops the requirement, I expect the FCC to do the same.

Lets all be constructive, eliminate all the bandwidth being devoted to a debate over the merits ow CW in the 90s and beyond and start to discuss

the implementation of the no code HF license which will come sooner or later. (I'm betting on sooner.)

> Are we who enjoy the technical aspects of the hobby headed for
> extinction? What do you think?

Y'know, I happen to think that Ham Radio never did have very many who could really build a rig. What has happened to this hobby is that it became much more popular thanks to the much derided Japanese electronics industry. But those who homebrew haven't disappeared, they've simply been outnumbered.

Second, the motivation to build gear isn't what it once was. I look at building/repairing your gear about the same way as most of us look at the shade tree mechanic of yesteryear. It really is more complicated now. Things like chips make construction somewhat easier, but the reality is that few homebrew radios can approach the low cost and high performance of most manufactured equipment. So you do it only because you like doing it. Those folks are very few and very far between.

It also isn't easy getting started. I have an EE from Johns Hopkins. Even that isn't really well suited for homebrewing. They don't teach this stuff anywhere. You sort of learn it by doing. And to be quite honest, I'm not really sure just how one is supposed to teach homebrew techniques. It is kind of like trying to teach reason. Or legislate quality (Yes, I mean ISO 9000!). People sort of get it or they don't.

That's a rough thing to say, but I don't know how to say it better.

Thankfully, there are perhaps as many people like this today as there ever have been. There just weren't very many to begin with...

SB QST ARL ARLB070
ARLB070 IARU meeting Part 1

The Administrative Council of the International Amateur Radio Union met in Tel Aviv, Israel, October 6-8, after the IARU Region 1 conference there. The council took the following actions:

1. After consultation with the International Secretariat, the council identified the ITU meetings during the coming year that require IARU representation, and the president announced the appointment of representatives.

2. The council agreed on instructions to be given to the IARU 1997 World Radiocommunication Conference (WRC-97) delegation. The International Secretariat will update this material as new information becomes available. The delegation will consist of IARU Vice President Michael Owen, VK3KI, Wojciech Nietyksza, SP5FM, and Larry Price, W4RA.

3. The council adopted a budget for 1997-1999, as submitted by the International Secretariat. The budget provides for financial contributions from the three regional organizations to defray a portion of the expenses that are assumed by the International Secretariat beyond its constitutional obligation.

4. The council received a comprehensive report from the 7 MHz Strategy Committee, and updated the strategies guiding IARU preparations for the possible consideration of related allocations issues at WRC-99. The approved action plan will be distributed to member societies.

5. The council updated the IARU Strategic Plan for the Development of Amateur Radio. In recognition of the special circumstances in Africa, the council created a special committee under the chairmanship of Hans van de Groenendaal, ZS5AKV, to develop a plan to marshal global resources to enhance the position of Amateur Radio

in Africa.

6. The council reviewed and updated present and anticipated future requirements for radio spectrum allocations to the Amateur and Amateur Satellite Services, particularly with regard to the low-frequency (LF) range, the 7-MHz band, the lower VHF range, and the microwave allocations.

7. The council began planning for IARU participation in the next world TELECOM (Geneva, 1999). The council also received reports from Regions 1 and 3 on their preparations for Amateur Radio participation in Asia TELECOM 97 in Singapore and Africa TELECOM 98 in South Africa, which is being organized by the respective regions in accordance with IARU policy.

SB QST ARL ARLB072
ARLB072 Amateur Radio Week

President Bill Clinton has declared this week, October 7 to October 13, as an Amateur Radio Week. The White House today faxed a copy of the president's message to ARRL member Darlana Mayo, KB2EPU, of Mt Vernon, New York, who's been working with the White House for several months to get the declaration. Mayo said she wanted the president to ''be aware of our value to the community--particularly in emergencies.'' Mayo--a ham for 10 years--is a member of ARES and RACES, and serves as an assistant director and an assistant emergency coordinator in the Hudson Division.

Here's the text of the White House declaration, which was signed by President Clinton:

Warm greetings to everyone observing October 7 through 13, 1996, as Amateur Radio Week.

In the past century, the medium of radio has changed the way we live and the way we view our world, and Amateur Radio operators have played a vital role in this communications phenomenon. Sharing knowledge and technological expertise, connecting computers via radio equipment, and linking people all across the globe, ham radio operators have helped to make our world a true global village. But even more important, they have provided a crucial lifeline of relief in times of disaster and hardship, ensuring that hope and help are on the way to those in need.

Amateur Radio Week offers us a welcome opportunity to thank our nation's amateur radio operators for their commitment to excellence and their willingness to work for the well-being of others.

Best wishes for a wonderful week.

Mayo is hoping to get the White House to schedule a formal
presentation of the declaration, sometime after the elections.

I think that's pretty accurate ... there have always been a certain
percentage of us who like to build our own gear. The percentage never was
high in my ham history of 29 years, but I think it is even less now.
Nonetheless, there are those of us who thrill on building something and
getting it to work.

There is a certain percentage of the population who like to PARTICIPATE
in life. People who make bread from scratch, repair their own autos (I
just replaced the clutch in my Colt), build their own electronics. Ham
radio offers the unique opportunity to build radio equipment and USE it
on the air without having to have it government inspected. I don't need a
license to build my own EPROM-burner (which I did) but do need a license
to operate the radio equipment I build, whether it be 160 meters or 5760
MHz.

Some of the equipment is easier to build these days. The no-tune
transverters for UHF/microwave operation are a dream. What I went through
to try to get a signal on 1296 MHz back in 1972! As mentioned above,
IC's do things now that we only dreamed of back in the late 60's.

I guess what we need is a network of Elmer's who do build their own
equipment, to help newcomers along.

4768. Electrical interference problem???

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-09 00:00:00 UTC
From: floyd.f.lucas@tek.com
Message-ID: <floyd.f.lucas.71.00337D92@tek.com>
Source record: 215120

I have this buzzing interference all across HF. It is there about
every 180 KHz across the ENTIRE band. Buzzing at a bandwidth
of about 130 KHz and then stopping for about 50 KHz.

I eliminated my house as a possible source. I tried to DF it with a
portable SW receiver and couldn't really nail it down. I don't think
it is the outside lamp posts because they are off during the day.
It was loudest between two street lamp posts on the sidewalk.
I didn't want to venture too far into the neighbor's yard. All of the
power lines are underground. It is very consistent across all
of HF but does get a little weaker in certain portions of the band.
The center of HF seems to be somewhat worse but that could be
due to my antenna. The antenna I'm using is a 80/40 meter combo
dipole.

Does anyone have any ideas as to what it could be?

Maybe someone knows exactly what it is because
of its unusual interfering pattern.

thanks

Floyd

Well, Roger, I think we may be a dying breed. Homebrewing and repair seem to be, at best, a niche interest among today's hams. A few reasons come to mind:

-- The growth in amateur radio today is in the Technician ranks. Until or unless they upgrade to operate on the HF bands, there is little homebrewing to be done. Most gear is readily available in plug-and-play mode, and conversion of surplus commercial equipment may be as close as many get. I do applaud Ten-Tec for introducting kits for VHF transceivers.

-- The demise of Heathkits is certainly a factor. While it may be argued that this is really assembly as opposed to homebrewing, the satisfaction of powering up a Heathkit and putting some mileage on something that one had a hand in making operable is still there.

-- As you pointed out, complexity of modern ham gear is a factor also. Most hams today don't own/can't afford/can't operate the sort of test equipment needed to service modern, commercially-available equipment such as produced by Icom, Kenwood and Yaesu, so it's back to the factory when they require service. I can remember that the instruction manuals for my Drake R-4/T-4X twins (which I still own and operate) not only had schematic diagrams, but also had alignment instructions. Only a VTVM and an RF Signal generator were required to perform this task; instruments that were common in the ham shack back in the 60s, when I got my General.

As an aside to the complexity issue, here's another problem: some of the newest and best HF transceivers present quite a learning curve, just to operate. When our club bought a new Icom IC-706, one of the problems we OTs discussed was the amount of work necessary to get it up and running. I'm not knocking Icom here, but someone pointed out the complexity of operation of the Icom versus some older Collins and Hallicrafters gear that had been donated to the club by the widow of a SK. On older equipment, most of the controls were located on the front panel, and had similar or identical names even from one brand to another. This is not an insignificant point, when you consider operating Field Day or any other contest, where there are numerous brands and models of transmitting and receiving equipment in use.

We can use the amount of discussion on the rec.radio.amateur.homebrew and the soon-to-come rec.radio.amateur.boatanchors newsgroups as an indication of the state of the homebrew/repair art.

One very avid group of homebrewers and assemblers today is the QRP crowd. I had the pleasure of meeting the famous Zuni Loop gang before Field Day this year, and almost everyone had a project to show. One of the recent projects involves building a 250-mw 40m CW transceiver, all of which fits

into an enclosure the size of a sardine can.

While I tend to think true homebrew is becoming a lost art, there still is hope for those of us who do like to build gear. I have had no electronics training, except for watching my father build Heathkit projects when I was young. I think the major problem is that back in "those" days, build your own gear was necessary because the gear was not available. As it was stated, homebrew gear does not come close to the features of the import gear. Without the need to build your own, we new hams are not as motivated to learn how to build our gear, then add in the problem of where are we going to go to learn it. I once saw an add for video tape electronics instrustons in a magizine. I been looking for several months trying to find it again, but no luck. Guess there wasn't a market. So we new hams are stuck to tread on our own. Playing doctor on todays gear can be very expensive. I do enjoy the kits still available. My first kit was the Heathkit Weather Station. At that time it was a $650 gamble. That was a lot of money to spend to take a chance of watching it go up in smoke. As it turned out, it worked. It reflects the quality Heathkit but into the instruction manuals. Its been 8 years and its still going. While I build several of the $10 to $20 kits from Ramsey, I am sorry to say,I still do not have a complete understanding of the workings. I am currently build the 2 meter radio kit from Ten-Tec. It was featured in the August issueof 73 Amateur Radio Today magazine. It has shades of Heathkit all over it. And at $200, not a bad deal. I hope other new hams discover the fun of building you own, even though it not true homebrewing.

About 3 years ago I informed the Portland field office of a problem occuring every 15 mins starting @ 5 mins after the hour, every single hour. I tracked the problem down to the Eugene area, but the problem could clearly be heard with a good receiver & antenna 100 miles away in Portland. First they lost the paper complaint & it was not in their log. Then I did another & they said they could not hear anything in their
office using a scanner with the stock antenna on the back. They refused to
do any further investigation. This was on a commercial business freq in 150 MHz. We have also made complaints about ham radio problems right in the Portland area giving them specific time patterns & frequencies but they do nothing.

Related anecdote:

In Nebraska a few years back there was a huge hue and cry over the Governor's declaration of a "No Meat Week" or similar (A significant part of the state economy is derived from agriculture, and a significant part of that part is cattle ranching). It was more than just the fact that vegetarianism was advocated, the group behind the request was a radical animal rights (as opposed to animal welfare) group of the PETA category.

Turns out that the governor wasn't even aware of his declaration. Governors get so many requests for such things that they've long since delegated them to staff who will routinely approve them and run them through the signing machine. Such was the case in Nebraska.

The fact that there are additional efforts, which may not pan out, to get the White House and the President to make an actual formal presentation suggests that the words "signed by President Clinton" might actually mean "delegated to a staff member with tacit approval, but without necessarily the president's explicit knowledge, who then ran the document through the signing machine."

Realize that I have no ill-will against the current administration, and I certainly don't think that Mayo did wrong (such a declaration may be good at least for our own morale). I'm only pointing out the realities of task delegation undertaken by any modern Chief Executive and his staff, and that one more autopenned document in the blizzard of official documents that the Office of the President deals with on a routine basis may not amount to much in terms of political value.

(And yes, though the task is still delegated, there are now more sanity checks in the system in Nebraska. :-)

SB QST @ ARL $ARLB071
ARLB071 IARU meeting Part 2

ZCZC AG51
QST de W1AW
ARRL Bulletin 71 ARLB071
From ARRL Headquarters
Newington CT October 9, 1996
To all radio amateurs

SB QST ARL ARLB071
ARLB071 IARU meeting Part 2

(Continued from Part 1)

8. The council received a report from the Future of the Amateur Service Committee (FASC). The Committee has completed a review of comments on its initial discussion document and is preparing a further paper on the subject of possible revisions to Article S25 of the international radio regulations, which is expected to be considered at WRC-99.

9. An extensive report on the utility of beacon stations in the Amateur Service was received from an ad hoc committee, and recommendations adopted.

10. The Ad Hoc Communications Planning Committee submitted a detailed report, which recommended increased emphasis on explaining the work of the IARU. A Public Relations Committee will be appointed to carry out this work.

11. The council reappointed to new terms the international coordinators and advisers who report to it on specialized areas of interest. They are: Robert E. Knowles, ZL1BAD, IARU Monitoring System, John G. Troster, W6ISQ, IARU Beacon Project, Hans van de Groenendaal, ZS5AKV, IARU Satellite Adviser, and Christian M. Verholt, OZ8CY, IARU EMC Adviser.

12. The council reversed its previous decision to decouple its meetings from regional conferences, and decided that its next regular meeting would be held in Beijing, China, September 13-15, 1997, following the Region 3 conference.

13. The council confirmed that the theme for World Amateur Radio Day, September 20, 1997, will be ''35 Years of Amateur Radio in Space.''

14. The International Secretariat reported on the status of the IARU Web site, http://www.iaru.org, which is now functionally independent of the ARRLWeb site. The three regional organizations announced plans to establish Web sites of their own, linked to that of the IARU and of those member societies in the respective regions that have established a Web presence.

The members of the Administrative Council are IARU President W1RU, Vice President VK3KI, Secretary W4RA, and regional representatives PA0LOU, SP5FM, VE3CDM, YV5BPG, 9M2SS, and HL1IFM. Additional regional observers invited to be present were 6W1KI, ZS5AKV, VP9IM and JJ1OEY.

> advertisements, a few columns, and mice type no one reads.)

NCJ started out as an independent publication (from Texas I believe) for
contesters who wanted coverage above and beyond what was offered in QST
and CQ. It continues to serve that purpose. I never heard anything
that
suggested that all contest information would be removed from QST.

As a general purpose magazine I think that QST should cover ALL facets
of
Amateur Radio. That includes contesting, homebrewing and digital
experimentation. If it were to drop any of these I would be greatly
disappointed.

Amateur Radio is a service and a learning hobby. It's hard to learn
about
one facet of Amateur Radio if it's been removed from the largest general
purpose Amateur Radio magazine in the U.S.

>by EXPRESS MAIL on Friday the 20th like the rest if us.

>Michael Crestohl, KH6KD (W1??)
>mc@shore.net

I do feel sorry for Randy for accidentally getting his application in too early. On the other hand, I agree with Michael that Randy should have understood the rules of the game and taken reasonable, and relatively inexpensive, steps to protect his interests in this transaction, *particularly* in light of this relatively unprecedented, once-in-at-least-several-decades opportunity.

I didn't take any chances. I went down to the post office on Saturday right when it opened at 9 AM. I double-checked my *neatly-printed* 610-V and the attached copy of the license, rechecked the mailing address and instructions while I was in line, filled out an Express Mail address envelope, bought a postal money order for $30 with cash ($30 plus the money order fee of a dollar or so), and sent my application and remittance overnight for $10.75.

After it was delivered, I called the 1-800 number on the receipt to confirm delivery. My package arrived in Pittsburgh on Sunday afternoon and was signed for Monday morning at 11 AM. Perhaps Randy didn't realize the desirability of using an overnight delivery service for its inherent guarantees and automated tracking during delivery. If he had asked at the postal counter and described his needs, perhaps the clerk could have recommended the actions that I took.

So, for want of an extra 12 bucks or so that he didn't spend up front, Randy wants to grind the wheels of government to a halt, potentially sink an enlightened callsign allocation system that took years of petitioning and negotiation with the FCC to obtain, and waste thousands of dollars of his and the public's money initiating a legal process that

will probably get thrown out of court, anyway?

Do what every Joe Citizen who makes a mistake, or suffers from the mistakes of others, does. Be realistic about what you can and can't change in life. Pick yourself up off the floor and resubmit your application using the techniques I described above. You may still have a chance with some calls. At the very least, you might be able to apply for a 1x3 before gates 3 and 4 open.

Source record: 215141
Cross-posted to: rec.radio.amateur.homebrew,,rec.radio.amateur.misc

Hi, Roger.

I, too, am still quite enamored with homebrewing, modifying, and repairing equipment. I am in my 20th year as a licensed ham, and I have a 2-year degree in EE. I work as a computer programmer, pure software, so all of my EE work is at home, related to hamming.

I am a pure CW operator on HF. I love QRP operating, and I enjoy building QRP equipment from kits and magazine/book articles. I also like restoring "boat anchor" gear, especially old Heath gear. I have a well-stocked junk collection from all my years of doing this, and I have a network of friends who also have similar interests and well-stocked junkboxes that I can raid.

Yes, I think that we are a dying breed, for many reasons.

It is virtually impossible for even an experienced "home technician" like us to repair much of today's ham gear. I had the cover off my TS-870S when I first got it last winter. I took one look inside, and swore I'd never open it again! There's no way I'd attempt to repair it, should it ever develop a problem. Nearly all of today's gear is that complex inside.

While there is always another interesting project or two showing up every month in QST, 73, or one of the other journals, too many of today's hams have little or no electronics background, and many of the articles are of a higher caliber than a beginner would want to attempt. Over the years, a great many construction articles have been related to that other dying art, operating CW. Too few of today's hams have enough serious interest in CW, coupled with their limited technical knowledge, and that makes the old CW rig construction articles worthless. TNCs, ATV, digital stuff, DSP filtering, all are too technical for the beginner. Heck, some of that stuff's too technical for me too! Another problem is a lack of "elmering" by us old-timers (yeah, I know, I'm not really an old-timer by general standards, but 20 years qualifies me as one for the newbies). I try to "elmer" anyone who wants the help, and I know of some others who do the same. But there's sure not as much of it going on as there was ten, fifteen, or twenty years ago. What happened? We sit and complain about the no-code license, VE testing making it too easy to get a ticket, lack of technical knowledge, et cetera, then we sit back and do nothing about it. This could change, but will it? I'm not faulting the newbies. They come from widely varied backgrounds, most of which aren't related to electronics or communications. Nobody knows anything unless they are taught, right? WE need to do the teaching, or it won't get done. Used to be, you had to do your homework to get a ham ticket. We had to KNOW the rules, electronics theory, radio wave propagation principles, and such. We didn't have the question pool available to memorize. That isn't the case any more. You

really don't have to know anything except how to read and memorize things nowadays. I personally think that's a bad thing.

On the bright side, a local ham just built (from scratch!) a super-regen receiver as a project with his two young sons, ages about 7 and 5. They scrounged my junkbox for some of the parts, and bought the rest. Their receiver uses transistors and ICs, but it's still just as hard to tune and fickle to operate as the old two-tubers were. It warmed my heart to see this project go together. They built a wooden box with a Lexan front panel, so you can see all of the components. It's built point-to-point and it's ugly as sin, but it has that certain curious beauty about it, a beauty only a home-brewer can appreciate. (that's a shame)

Suppose the newbie finds a project that he/she wants to build. At least a lot of the projects these days use parts available at Radio Shack or from a mail-order supplier such as Mouser. But let's uppose that this project is not something from last month's QST, but instead is from an old ARRL Handbook from the 1960s. Where is that poor sucker going to find the old style parts to build that whoosy-whatsis? High-voltage parts, tubes, and other old-style parts are too hard to find, and when you do find them, they are way expensive. Too many of the "old timers" have passed on, and their junkboxes (which were filled with wonderful old parts that are now worth their weight in gold) were simply emptied into the dumpster once the commercially-made ham gear was sold off. The resources are drying up.

There's also this perception that anything that doesn't contain a bunch of ICs is not useful, so no one bothers. Hey, tube gear may be old and not sophisticated, but it still works. And, it's still fun to build, even just for the nostalgia value. The digital revolution has brainwashed too many of the new and prospective new hams. The desire these days is for more and more features, and the older gear, whether homebuilt or not, doesn't deliver this. I don't know how to change the perception. Maybe we can't.

I apologize for rambling on so.

Thanks for listening!

Hello Ramon:

My humble apologies then. From one amateur to another, I am trying to
keep the ham radio newsgroups free of spam as much as possible as I'm
sure you are, but as you pointed out, posting information on SpamBots
is a rather controversial subject because the concept is so new. I'm
afraid I may have misunderstood your intentions.

Once again, my humble apologies for this misunderstanding. :-)

It might be of interest to point out that *all* the DX reports on the 160m email list are due to stations utilizing CW. Not some, not most, but all. Nothing contained in the charter of that list says only CW reports are welcome. Topband DXers just naturally choose code.

Hi Paul,
I've built my station from scratch. The written test I took 20 years
ago had no bearing on my homebrew ability but having to learn the code
was directly responsible for developing a desire to build. I never would
have attempted to build a SSB rig as my first project but knowing code
gave me a reason to build code gear.

>Paul,
>
>I think you've hit on something ... many (not all) in the old guard
>can't face the possibility of having to admit (to themselves, at least)
>that the tests that they passed are "no big deal" ...

Shoot Carl, I'll be the first to admit the written was no big deal.

(Should there be a comma between "Shoot" and "Carl"? After all, I'd
hate to see someone actually shoot you.)

>they have to have
>a way (the code test) to convince themselves that there's something
>"special" about them, since they know (deep in their hearts) that the
>written tests are a joke and they memorized the answers anyway to squeak
>by with a 75% score ...

I don't believe any of us consider ourselves special. Do you consider
yourself special, Carl?

>As one pro-code fanatic said they can't stand the thought of losing
>their "bragging rights" ...

"One" is singular; "they" and "their" signal plurality. Would you
like to rewrite that sentence? Maybe you meant "One pro-code fanatic
said that he can't stand the thought of losing his `bragging rights'."
Care to attribute that comment to someone? Otherwise, I'll assume
you made it up.

Code will help you to overcome such grammatical errors and fantasies,
you know. =:o

>This is clearly NOT a valid, compelling reason for maintaining a
>backward status quo ...

You still haven't provided a compelling reason to eliminate the
code.

Now Andy, don't be so paranoid as to believe that the NSA monitors hams.
They and the FCC have entirely different missions.

If my marine band xcvr puts out a spur on another channel, I won't get a
pink slip from the NSA, but I surely will (I did) get one from the FCC.

I have come into possession of a Bearcat 50xl scanner, but have absolutely no clue as to how to program it? I am not even sure if it works? I would really appreciate it if anyone out there could give me some clues on how to use/program it. I purchased it used from someone who no longer had the instruction manual. Also what freq's can it scan?

I dont subscribe to this group so please email all replies. Thanx.

John

A life? OK, lets look at it.
Burt's definition of a "typical" ham:

Male - well I think Burt qualifies
Middle age - like it or not you're there Burt
Overweight - hmmm, maybe not
Boring - DEFINITELY
Interested only in self - well, sure get that impression here
Repetitious - uh, are we beginning to see a pattern here?

Thus we have Burt Fisher, the UTH (Ultimate Typical Ham)

You asked, the other night, Burt, how dare I insult you like that.
Well, when you kept your insults limited to "typical" hams or added
"some" hams I didn't mind, and even spoke up for your right to have
such an opinion (of course I STILL support your right to have that
opinion, just as I do my right to express mine that you are the UTH),
but since most, if not all, your recent posts seem inclusive of all
hams I could just as easily ask you the same question.

Personally, I do NOT believe you are half as bad as you make out to
be. I do not pretend to know what your motivation for these attacks
are, although I could make some educated guesses. If I am right, I
would be happy to discuss it in E mail. I would even give my word NOT
to blow your cover if it should turn out that you are really a nice
person, if that is what you wish. <G>

>Carl - wa6vse
(Tech+ for 21 years)

So sending huge files digitally that few will ever read contributes to
a higher rate of efficiency? That seems kind of nutty.

Maybe there should be a measure of content included in this empirical
efficiency rating: Sum(content quality of each QSO) / Hz, so rather than
just counting the nr of QSOs, we sum over their content rating.
But of course content is subjective: If I play a game of chess via CW
and the "Content Police" find chess boring, does that mean I'm not
using the spectrum efficiently?

Lucky for us, no mention of content nor efficiency (however it's defined)
is mentioned in Paragraph 97.1.

: > five years later. Will I have to retake the 13 wpm code test?

: Nope, CW tests are somewhat like born-again Christians. Once saved,
: always saved. Once passed, always passed.

: 73, Cecil, W6RCA (not speaking for my employer)

Err, unlike Christians who have everlasting salvation, _all_ test
credits are given in the form of Certificates of Successfull Examination,
better known as a CSCE. CSCE's are valid for 365 days, whether given for
theory, code, or both. Accumulation of the proper credits translate into
a license based on those credits (i.e. a particular class of license).

Simply, Gary has a bit less than a year to pass the General theory
(element 3B) to make that code test "permanent".

In Gary's case, he is currently a Tech Plus. This gives him automatic
credit for elements 1A, 2, and 3A. These are good for the duration of
his license. He recently passed element 1B. This in conjunction with
element 3B is enough for a General class license. Gary _must_ pass
element 3B by the time his CSCE for 1B expires, or he will have to pass
1B (or 1C) again. Once that is done, he will hold the class of General
(all salute, please!) and the credits for 1B and 3B will become "permanent".
Further advancment can be achieved by passing element 4A, which is the
only additional requirement for Advanced class.

There is an instance where a CSCE for code _is_ permanent, but since the
advent of the Tech Plus license, code CSCE's are only good for 1 year.

73 de AE4KO, ARRL Accredited VE

P.S. I would also like to strongly recommend continuing to study to
pass the 1C (20 wpm) code exam; it's easier now than waiting a few
years! The theory for the extra class is relatively easy! That is,
of course, after Gary passes the General and Advanced theory exams!

The QRP folks are almost certainly the most homebrew-oriented hams today.
Some of the journals, most notably SPRAT (G-QRP Club) are packed with
homebrew ideas and projects. But this is changing rapidly. An experience I
had at Dayton this year was enlightening.

At the Dayton QRP banquet, the MC said it would be interesting to know what
kinds of rigs people were using. He then asked how many people were using
the NorCal 40, HW-8, and so forth, naming each commercial rig or kit in
turn. (There was quite a list.) Finally, he asked if he had forgotten any
types. I meekly mentioned "homebrew". He hadn't thought of asking! Out of
150 or so people in the room, a handful (fewer than 10) raised their hands.

That evening or the next there was a judging of some homebrew rigs, and
several were beautiful or downright ingenious. But homebrewers are in a
large minority even among the QRP crowd -- in the U.S. at least.

If you have questions, try the FCC web site. If you can't find the answers to your questions there, I suggest that you e-mail Dorothy Conway at the FCC (dconway@fcc.gov). She answered all of my questions many months ago as to what and how though the when was delayed for an eternity. I received my former call and the response time was approximatly 10 days. Excellent by most government standards.

******** WHY AN AMATEUR RADIO OPERATOR IS CALLED A "" HAM """
****
==========
IT GOES LIKE THIS - THE WORD HAM WAS APPLIED IN 19O8 AND AWS THE CALL
LETTERS
OF ONE OF THE FIRST AMATEUR WIRELESS STATIONS OPERATED BY SOME MEMBERS
OF THE

HARVARD RADIO CLUB.THEY WERE ALBERT S. HYMANN,BOB ALMY AND PEGGIE
MURRAY.AT
FIRST THEY CALLED THEIR STATION HYMAN - ALMY - MURRAY.TAPPING THIS OUT
ON CODE
CALLED FOR A REVISION AND THEY CHANGED IT TO HY - AL - MU, USING THE
FIRST TWO
LETTERS OF EACH NAME.EARLY IN 19O9,SOME CONFUSION RESULTED BETWEEN
SIGNALS
FROM AMATEURS WIRELESS HYALMU AND A MEXICAN SHIP NAMED HYALMO,SO THEY
DECIDED
TO USE ONLY THE FIRST LETTER OF EACH NAME AND THE CALL BECAME " HAM ".
IN THE EARLY PIONEER UNREGULATED DAYS OF RADIO,AMATEURS PICKED THEIR OWN
FREQUENCY AND CALL LETTERS.SOME HAD,AS NOW BETTER SIGNALS THAN SOME
COMMERCIAL
STATIONS.THE RESULTING INTERFERENCE CAME TO THE ATTENTION OF
CONGRESSIONAL
COMMITTEES IN WASHINGTON AND THEY GAVE MUCH TIME TO PROPOSED LEGISLATION
DESIGNED TO CRITCALLY LIMIT AMATEUR ACTIVITY.IN 1911 ,ALBERT HYMANN
CHOSE THE
CONTROVERSIAL WIRELESS REGULATION BILL AS THE TOPIC FOR HIS THESIS AT
HARVARD.
A COPY WAS SEND TO SENATOR DAVID WALSH.THE SENATOR WAS SO IMPRESSED,HE
SEND
FOR HYMAN TO APPEAR BEFORE THE COMMITTEE.HE WAS PUT ON THE STAND AND
DESCRIBED
HOW THE LITTLE AMATEUR STATION WAS BUILT AND HE ALMOST CRIED WHEN HE
TOLD THE
CROWDED COMMITTEE ROOM THAT IF THE BILLWENT THROUGH,THEY WOULD HAVE TO
CLOSE
UP THE STATION BECAUSE THEY COULD NOT AFFORD THE LICENCE FEES AND ALL
THE
OTHER REQUIREMENTS WHICH WERE SET UP IN THE BILL.THE DEBATE STARTED AND
THE
THE LITTLE STATION " HAM " BECAME A SYMBOL OF ALL THE LITTLE AMATEUR
STATIONS
IN THE COUNTRY CRYING OUT TO BE SAVED FROM MENACE AND GREED OF THE BIG
COMMERCIAL STATIONS WHO DIDN,T WANT THEM AROUND.FINNALY,THE BILL GOT TO
THE
FLOOR OF CONGRESS AND EVERY SPEAKER TALKED ABOUT THE POOR LITTLE STATION
~HAM~
THAT,S HOW IT ALL STARTED.YOU WILL FIND THE WHOLE STORY IN THE
CONGRESSIONAL
RECORD.NATIONWIDE PUBLICITY ASSOCIATED STATION " HAM " WITH AMATEURS.
FROM THAT DAY TO THIS AND PROBABLY TO THE END OF TIME,IN RADIO,AN
.....

Hello,
We have a GE Portamobile Radio on 49Mhz. Is anyone familar with this radio? All we have is the radio on 49.180 Mhz and the AC powersupply that clips on to the bottom. The radio does transmit 10 watts but we do not have a receive xtal. The model # is HN44LA833 TX data ET61A and RX data is ER43A. Any info would be appreciated. Will the radio tune up on 6M? Does anyone have realigning instructions? Copies of the service manual?

Thanks
AB5LG

>do applaud Ten-Tec for introducting kits for VHF transceivers.

I think many of today's Techs (and other classes) aren't homebrewing.
Part of the reason for that is many of them are new to amateur radio
and aren't quite sure of their skills and knowledge yet, IE they're
a bit intimidated by the thought of building their own equipment. And
part of it is the wealth of available off the shelf equipment, so there
is no pressing need to build. But I take issue with the idea that you
must be on HF to homebrew.

Homebrewing becomes easier as you go up in frequency. There are
several good reasons for that. Stripline circuit boards remove
many of the stray problems, eliminate messy discrete inductors,
and favor the much easier to use SMD parts. Harmonic suppression
becomes easier as well. And most beginning VHF+ projects are FM.
That simplifies many things. The IF operates with hard limiting,
so AGC systems aren't required. The demodulators are nearly
foolproof, and easily tuned up by ear. Frequency stability
tolerances are relaxed. Etc.

And there are many good ICs which offer complete FM IF subsystems,
complete demodulators, etc. And there are good packaged mixers,
cheap and stable MMIC gain blocks, and even a number of electronically
tunable LO sources. On the transmit side, there are hybrid PA modules
available that are stable, 50 ohms in and out, and offer power outputs
in the 5 to 50 watt range when driven by low level inputs.

I build a lot of quick projects to test new ideas, and it is much
easier to do so at VHF+ than at HF.

>-- As you pointed out, complexity of modern ham gear is a factor also. Most

>shack back in the 60s, when I got my General.

Actually, today's radios are somewhat easier to service than the old belchfire models. Certainly they are *safer* to service. You can't just look to see which tube isn't glowing, but then tubes failed often, transistors and ICs seldom fail. When they do fail, it is usually obvious what's happened by the behavior of the radio. Many of today's radios fail, when they do finally fail, due to passive component failures, especially intermittant problems. Those were a bear to track down in the old belchfire radios, and they still can be in the newer radios, but liberal use of component cooler and heat guns can find them fairly rapidly.

You don't really need elaborate test equipment. The most important piece of test equipment is between your ears. Beyond that, a DVM and a signal source are still the basic tools. A logic probe can be handy too, but usually not essential. Sometimes a scope is a very nice thing to have, but it was in the old days too. It's just that back then many of us couldn't afford one. Today, there are inexpensive imported scopes available, and the surplus market teems with high quality scopes we would have killed for in the old days.

A power meter and a dummy load are handy things to have for transmitter servicing today, but they were back in the belchfire days too. The only tool many of us consider a necessity today that was almost never seen in the old days is a spectrum analyzer. In the old days, we just *hoped* our signals were clean. Today we can look and see that they are clean. Again, the surplus market can supply us with instruments we couldn't even have dreamed of owning in the old days. But we can do without one, and just hope our signal is clean, like we did in the old days. (I don't recomend that, but we can.)

>As an aside to the complexity issue, here's another problem: some of the

>numerous brands and models of transmitting and receiving equipment in use.

I'm frankly flabbergasted by this comment in reference to the IC-706. In my opinion, the IC-706 is the most intuitive and operator friendly radio I've ever owned. It takes about 5 minutes to learn to navigate the menus, after that you can toss the instruction book (even without the initial resort to the instruction book, you can quickly figure things out). Every feature is clear and basically self-explanatory.

That's certainly not true for some other radios. I spent two hours, manual in hand and salesman by my side, trying to make the FT-8500 do a simple thing the manual says it'll do. We couldn't figure it out. We called the factory for support. They tried to talk us through it, and it became obvious that *they* didn't understand how to do it either. (We found out later that the manual was wrong, the firmware version in the radio we had didn't support doing what I was trying to do. Arrrgh!) Some of the Standard radios have menu systems which are byzantine too. And I don't even want to get into the bizzrre idea of a user interface that Kenwood has. But the IC-706 is a dream to operate. Everything is very clear, intuitive, and easy to access.

OTOH, I defy you to set the carrier balance and sideband suppression on a HT-37 belchfire radio without resort to the manual (and plenty of patience). That's something you found yourself doing *a lot* on that radio. Tuning up a B&W 6100 *properly* for the first time without resort to the manual is likely to cause great frustration too. The old radios each had their own foibles you had to learn. I ruined a set of finals in a TR-3 before I caught on to the proper way to tune one up. Modern radios won't let you do that. They'll protect themselves if you try to do something stupid.

Yeah, I got one of those letters a couple of days ago too; dismissed because it was received too early. Interesting, because I mailed it from Amherst, MA at 7:30 AM on Friday 9/20; plain old First Class, in the box out in front of the Post Office. Bet they couldn't deliver a late mortgage payment that fast..

SO, now I have to figure out how to get my money back, and reapply. In the grand scheme of things, this is all pretty insignificant; the sun still rises.

Hi Aaron, that's true but the question didn't involve CSCEs. The question was: If one goes for an advanced class license 5 years after obtaining a general class *license*, does one have to retake the 13wpm test? The answer to the question is: No, as long as one doesn't let the general license expire, the 13wpm credit associated with the general class license is everlasting.

>first got it last winter. I took one look inside, and swore I'd never open
>it again! There's no way I'd attempt to repair it, should it ever develop a
>problem. Nearly all of today's gear is that complex inside.

And nearly all of it is very simple to repair. It doesn't matter how
many parts are inside, you're only going to have to replace the bad
one. Before you even remove the cover, you should be able to narrow
the problem down to one or two functional blocks from the behavior
the radio is exhibiting. All the other parts can now be ignored. A
quick check or two will narrow the problem down to one functional
block. A couple more checks and you're down to only a few components
as possible failure points. Then straightforward component level
troubleshooting will identify the faulty component. Simple.

Many of today's radios have gone to surface mount parts, and that
makes repair a lot easier. You only need to be able to get to one
side of a circuit board, so you often don't have to disassemble
the radio very far in order to replace the bad part. SMD has made
the repairman's job much easier.

>stuff's too technical for me too!

You're right that many of the old projects revolved around CW transmitters,
and not that many people are interested in that anymore. But the other
stuff isn't too technical for the beginner. Most of the high tech is
safely tucked *inside* the ICs. So the beginner can treat them as
functional blocks with a given transfer function. That makes building
easier, not harder.

>communications. Nobody knows anything unless they are taught, right? WE
>need to do the teaching, or it won't get done.

That's right, If we want people to build, we have to show them how to
do it. Of course it would be helpful if we've kept up with technology
ourselves and actually know how to do what the person we're teaching
wants to do. People are capable of learning many things on their own.
They don't need formal teaching to understand modern electronics. The
library and bookstores are full of texts from which they can learn
that. But some of the *craft* skills needed for home construction are
best learned by example. There are many tricks of the trade that ease
home construction. We need to show these to the beginning builder.

>Used to be, you had to do

It's not really that different from the old days. And frankly, what
you need to know to pass the exams, then and now, is woefully inadequate
to prepare you to be a builder. Passing the exam merely gives you license
to begin learning how to do that.

Ugh. A superregen. I hope it doesn't turn them off to building. They
might get the impression that that's the best they can do at home and
turn back to commerical equipment. (I'm not knocking their project if
what they wanted was to find out how bad the old circuits were. I
just hope that they know that for a similar parts count they can make
a much better radio today.)

>this. I don't know how to change the perception. Maybe we can't.

Actually, I hope we can't. The newer designs are better. They're easier
to build. They have better performance. And the parts *are* available.
Reliving the old days may be nostalgic, but it isn't the best way to
approach most building projects today. There's a reason the old parts
are hard to find, they don't do the jobs we want done as well as modern
parts can do them, so they've fallen out of use.

Hmmmm.... I'm curious. When and how was this well established? I can
understand one having an opinion of that nature but how can it be so
well established? With any large group of people there are bound to be
(and have been) a large number of interests and my gut feeling is that
at all periods of Amateur Radio there have been those who liked to build
and those who liked to make contacts, even after it was old hat.

What do you mean by contest-style operating?

> Yes, good operating skills are vital, but the skills required are
> not those of the contester. They are the skills of the public
> service communicator. And those skills are different from those
> of the contester.

I would argue that traffic handling and contesting do share some
common traits. True, contest operations alone do not fully prepare
one for effective emergency communications. But developing the skills
to effectively listen to weak signals, or signals masked by QRM and
to exchange information does have relevence (sp?) to emergency
communications. The exchange for Sweepstakes is actually based on
the heading information of radiograms.

The best scenario is to have real emergency communications training.
But I strongely disagree that good contest operating skills can not
make for a better emergency communicator.

I can only assume they continue to do it because it is fun, for them. I
don't always share the views of fun as other Amateurs but at least they
are on the air and doing something.

> "Because... euhhh... I don't know"

Oh, oh, here we go again. The short *correct* answer is that no one knows how this term started, or how it became accepted to mean amateur radio operator. There are, of course, a number of theories.

One popular theory is that it is the amalgam of the initials of the last names of three Harvard students who supposedly had an amateur station in the teens. Their names were supposedly Hyman, Almay, and Murray, and they operated the little station with a call sign of HAM. Supposedly, an impassioned speech was made on the floor of the US Congress about little station HAM during the early fight to eliminate amateur radio (by placing all radio under the control of the Navy). This speech supposedly turned the tide and defeated the bill eliminating the amateur service. The problem with this theory is that an exhaustive search of the Congressional Record turns up no such speech, and Harvard has no record of little station HAM.

Another theory holds that it derives from what commercial operators called amateurs. They referred to them using the old telegrapher's insult of "ham fisted", meaning that they weren't of professional skill. This may be the true origin of the term, but it seems unlikely that amateurs would willingly adopt a term meant to be insulting to them as their name.

A third theory derives from the fact that Hugo Gernsback published a magazine called Home Amateur Mechanic in the early days of radio and it included many radio construction projects. Thus when asked what sort of radio a person had, he might send back that he had one of those HAM radios (using just the initials of the magazine name in true CW shorthand fashion). I like this explanation best.

>
>Gary

I agree, there is absolutely no reason to spurn attempts to optimize
data throughput in amateur radio. I might disagree that it should be
universally recognized as the most important metric in amateur radio. In
commercial radio there's no question that throughput is of the utmost
import - or more to the point, dollars/min "throughput".

It seems to me that there's enough room in the art of ham radio for a lot
of metrics. Everyone seems to have some particular aspect of their
station performance metric they take pride in optimizing and maximizing.
For some, it may be bits/sec. For others it is miles/watt, or words/min,
or QSO's/min, or square ft. of aluminum-Hz. For me, it's QSO-min/dollar
or QSO-miles/dollar, hi hi. (My wife seems to think that food, shelter,
clothing, transportation, and security should come before ham radio gear.)
So I'm forced to try to produce maximum effectiveness for minimum
investment. It's a fun challenge. This is supposed to be fun after all,
isn't it?

Several "W" and "K" 1x2 new calls showed up on today's "Daily FCC Update" on the WWW QRZ call server. I checked a few of them and found they were issued 10/8.

Looks like the Gate 2 logjam has finally broken. I had expected new calls to all show at once, rather than piecemeal.

The accuracy of the Congressional Record in the early part of this century also makes it a dubious tool of proof (though obviously the lack of record would be a plausible disproof).

Before reforms were enacted in this century, rules of Congress were lax enough that just about anything could be read by a member into the record whether it was actually said on the floor of Congress or not.

The potential for abuse is obvious, as many members of Congress could appease constituents and special interests by claiming to have made an impassioned plea for their cause on the floor and pointed to "the record" as proof. This led to many obviously ridiculous matters "of record," such as speeches made by members days or weeks after they boarded a plane or boat which crashed or sank, killing them.

>Another theory holds that it derives from what commercial
>operators called amateurs. They referred to them using the

I had an English professor back at UMD who pointed out that "bad" or "insulting" words sometimes fall into a period of disuse, and that disuse cause them to become obscure, setting the stage for them to be (ironically) resurrected with more polite, or merely self-deprecating, meanings. Consider, for example, the word "naughty." In Shakespeare's time, it directly translated as "evil" or "demonic," and therefore fell out of polite usage. In current usage, it's much more benign, and often used to good-naturedly scold friends or children.

It would not be implausible then, for what started out as an insult to later become adopted by the target group as a self-deprecating nickname to be worn with pride.

>A third theory derives from the fact that Hugo Gernsback published

>Gary

Here's a few more apocryphal (read: likely wrong) ones:

- Home Audio Modulation (variation on the Hugo Gernsback story; has anyone confirmed that the Home Amateur Mechanic periodical actually did exist? It has the speciously-documented flavor of the "HAM/ Congressional Record" story)

- From the Cockney pronunciation of L'Amateur

- From the initials of Hiram Maxim, W1AW (his actual middle name being Percy being an obvious rebuttal to this one)

- Hardly Any Money (obvious post-hoc creation of modern times)

This "Origin of HAM?" question comes up often enough, and is responded almost without fail with the mythical explanations (each usually presented with a perfectly straight face as the "one true origin") and the inevitable followup flames, that it probably deserves inclusion in the FAQ. I've bundled up all of the information I've collected, including this thread, and sent it to John Seney, WD1V (john@wd1v.mv.com), who is the current maintainer.

A great deal of the confusion could be avoided if everyone remembered
that it's not "HAM," but "ham." Incorrectly spelling it uppercase makes
it look like an acronym, thus causing people to run around trying to
find out what it's an acronym for!

Happened to spot an apparent Gate two call N6DW in Thursday's run.
Issued on 10/8 to an individual with first and last initials DW. Now this
could be a relative's or previously-held call, I suppose, but wonder if
this is one of early Gate two issues?

Hope we get them soon.

Back in 1971 or so, after I played with the classic LC tuned circuit-long wire-antique earphones-diode thing, I homebrewed a superhet AM radio using transistors, and various parts scrounged from the junk box. Designs were mostly copies of other radios, but different sections came from different source radios. And it actually recieved some stations when I first fired it up, before alligning it (I lived 6 miles away from a 50KW Am station on 770KHz (WABC)). Also tried to build a copy of the 5 tube "All American" AA% radio, but that didn't work. Think one of the parts I scrounged (IF transformer?) was bad. My father thought a superhet might be too ambitious, but Iwanted to do a 'real' radio.

Right now, I'm playing around with an old early 60's AA5 AM tube radio, substituting sub-mini "pencil" vacuum tubes for the standard 7 pin tubes (using a heater voltage transformer to run the 12V and 6V heaters). No 'real' reason, other than making a radio that might have been manufactured if semiconductors had not been invented, and sub-mini tubes being the "next generation" of tubes for AM radios (assume that mass production of pencil tubes would get the cost down). Having fun. Still trying to design a triode osc and pentode mixer stage to substitute for the 12BE6 pentagrid converter. triode oscillates fine, mixer output is a weak signal, weaker than the 'BE6. Will probably learn about some subtile things of superhet design.

Frank,

It has been shown numerous times that the FCC defines amateur radio as a service and that specific reasons for being and objectives are established as justification for our existence and our frequency allocations ...

Why insist on saying "I agree with ..." and then turn around and say "but in regards to catagorizing Amateur radio I call it a hobby. A usefull one, but nothing more." ???

The thing that concerns me about this insistence some people have about saying "It's ONLY a hobby ..." is that some day, the FCC may just hear that and listen ... when that happens, our bands are history ... there is NO WAY that the regulators can justify our allocations for a hobby. Period. End of story. Fact. (Ask Phil Kane if you don't believe me.)

Perhaps you've already thought of this, but just look in the Silent Keys listings in QST for two years ago. Pick out the call you want and apply for it. You might even try a bit less than two years because it takes some time for the info to get into QST.

<jreid@aloha.net> wrote:

I know that many people think that the FCC was and continues to be a royal pain in the _ _ _ but I for one will miss some of the support that was received from the FCC in the past.

As society becomes more and more dependant on using the RF spectrum as a vehicle for communication and other activities, we need to ensure that the frequency spectrum is MANAGED in such a way that all of us may use it in one way or another. Key word is manage, which to me means the focal point for activites. What kind of activies am I talking about?

I gave up on CB about 6 months after the FCC killed the license requirement for that activity. The activities I encountered while listening/participating (at the time I was stationed in Hawaii) were rough to say the least. (Linear amps with sideband splatter 3 channels either side of the base carrier.) Perhaps I will get my ham license someday, provided that it too doesn't go away.

As a boat owner, I carry a hand held Marine VHF. The FCC has done in the majority of the license requirements for operation of Marine VHS as well. I can't wait to hear how out of control that band will get, considering that Marine VHF is often used for life support activites.

The Livermore, CA monitoring facility (one of the ones which is becoming automated) is less than a mile from our RC aircraft flying field. We have obtained the assistance from the FCC staff at that facility to help resolve issues with RFI problems several times in the past. Where are we going to get real time assistance in the future? Philly?

Questions for all; Why are these facilities shutting down? Why has the operations budget been reduced to a point where they can no longer do the job as defined by the charter? What is the impact going to be on all of us?

4862. 1x2/2x1 List where?

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-11 00:00:00 UTC
From: k0hb@hamlink.mn.org
Message-ID: <845029898.AA07440@hamlink.mn.org>
Source record: 214956

Someone (sorry, I lost the message) asked where they could find
out what "Extra" (1x2, 2x1) calls were still available.

The best place I have found is the web page at:

http://www.qrz.com/vanity.html

The page is updated daily. If you are not web-enabled, there are
some commercial outfits (W5YI, etc) who will snail mail you a disk.
I haven't paid much attention, but I think they charge around $15
per call district.

A caution for folks thinking about 2x1 calls --- remember that
AH/KH/NH/WH/AL/KL/NL/WL/KP/NP/WP prefixes are not issued to
mainland applicants, unless they are "retrieving" a call.

73, de Hans, K0HB

I would have to agree with Ray, I am a going to be a new Amateur Radio operator soon(Taking the No-code test tommorrow). I do not know the code, but intend on learning after I spend some time in the Ham world. I am very glad that the FCC decided to offer a no-code for beginners, I intended on getting my liscense 6 years ago but at that time code was required. Since that time my interests have grown back into Ham Radio. I have tried to learn code on different occasions, but didn't seem to get the hang of it. I have a more ocular memory as opposed to aural memory, and couldn't seem to grasp the code. I will however be more likely to try so I can get into the 10m band. I am trying to say is that although some may pick up the code quite easily others may not have the "nack" for it. So as an alternative we can get into the hobby and delve more deeply as we learn more and gain more interest to venture out into other areas of the bandwidth. As for the comment "keeps some the bad apples out" I would have to say that yes I think it would because I have listened to a lot of local Simplex and repeater freqs and most have the No-code Tech. By listening to them I came to the conclusion that our 2 meter net is just a bunch of liscensed CB ers. Now there is of course exceptions, but for the most part I was extremely disappointed by the profesionalism of our local 2 meter Hams. Now you move into the Code required bands and there are occurances of this also but it seems so much less frequent. I intend to have a professional attitude on the waves. As would I hope every new ham would.

Jason (soon to be xx4xxx)I hope :)

4864. JOTA help in KATY, TEXAS

The COBRA Patrol of Cub Scout Pack 987 is desperately seeking someone to help us. We would like to be part of the Jamboree On The Air during the weekend of October 19-20. Part of the Communicator Badge deals with contacting others using different means. JOTA is a worldwide activity for Scouts.

If you have the capability to help us, please let me know.

Thanks...
Mike Gay

I'm interested too.
I am making the CAT interface cable so I can use my PC to
run the RIG.
So far I like the RIG, easy to use, got good reports on SSB.

4869. Windtrax Balloon Launch 10-12-96

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-11 00:00:00 UTC
From: mgarrett@prairienet.org
Message-ID: <53mc2p$342@vixen.cso.uiuc.edu>
Source record: 214963

Windtrax, 96 will have its 10th balloon flight this Saturday, October 12, 1996 from the New Agusta Public Academy in Indianapolis, Indiana. Launch time is slated for 8 am EST 13:00 UTC (aproxmate) with the following scheduled to fly:

ATV: on 439.250 Vertical polarity showing two camera views plus a 4 color video Id.

GPS/Packet: on 446.000 at 1200 baud with latitude/longitude and altitude in meters in the text.

Cross Band Repeater: Input on 144.300 with outputs on 444.850 and 52.525 Mhz FM.

A Hf net will be held around 3871 Khz + or - to give balloon status and launch information. Look for the Windtrax 96 balloon net with possible callsigns of WB9IHS/W9DUU or KT9V as net control.

All amateur are invited to participate in this balloon flight as the balloon asends to 100,000 feet plus and should have a coverage area of 400 miles plus as it reaches maximum altitude. Launch preparation balloon tracking and net controls will be done by the students of the New Agusta Public Academy of Indianapolis, Indiana.

> to the ARRL and state his case? And see if an exception was warranted?

He did. The completion of the sale was PENDING. The rules state that
Ruh had to be completely divested of his interest by the time of the
submission. It was not therefore, he was disqualified. According to Mr Rih, he
notified the ARRL of the PENDING yet not completed sale. Therefore the
disqualification

So what's the problem BUB???

I've seen something official on those prefixes, and they predate the W prefix. I know X calls were experimental, and Y were technical and training schools. Z was something too, but I don't remember what.

There was at one time a broadcast regulation preventing the assignment of calls ending in "USA", the initials of a federal agency, or the initials of a living president. As you probably know in the Twin Cities, this one has been repealed. I don't think it ever existed as a formal reg for the amateur service, but it seems to have been an informal policy.

Actually, I've been looking at the daily updates from ftp.fcc.gov,
I mean actually inspecting the database files, and the only vanity
calls I've seen issued are under Gate 1 and Gate 1A. You can
tell from the 'vanity flag' and 'vanity type' codes in the database.

> I think this is almost certainly not the origin of the term.

Hi Gary, remember the PBS TV show, "Connections"? Could have been
that "ham actor" came from the Cockney pronunciation of "'amateur actor"
and "ham" radio operator then was adopted from the term "stage ham".
So the orgin could have been indirect through the English theater to
the American theater to amateur radio.

SB PROP @ ARL $ARLP042
ARLP042 Propagation de KT7H

ZCZC AP62
QST de W1AW
Propagation Forecast Bulletin 42 ARLP042
From Tad Cook, KT7H
Seattle, WA October 11, 1996
To all radio amateurs

SB PROP ARL ARLP042
ARLP042 Propagation de KT7H

Conditions continued flat last week, with still another 7 days of no visible sunspots. This has been going on for quite some time now. Currently the geomagnetic field is somewhat active, but it is expected to quiet down until around October 17 to 20 and again around the 23rd. Solar flux should continue flat, rising slightly to around 70, then declining again to the sixties at the beginning of November.

Robert, WB5CRG sent email asking about A indices from a year ago and suggested that they be included with each weekly bulletin. Starting today, the daily planetary A index will be listed along with the daily sunspot and solar flux values. Anyone wanting to contact the author of this bulletin can send email to tad@ssc.com or packet mail to KT7H@N7DUO.WA.USA.NOAM.

Sunspot Numbers for October 3 through 9 were 0, 0, 0, 0, 0, 0 and 0, with a mean of 0. 10.7 cm flux was 69.6, 69.4, 68.5, 68.8, 68.3, 67.9 and 67.9, with a mean of 68.6. Planetary A indices for the same period were 13, 5, 3, 3, 4, 6, and 18, with a mean of 7.4.

Here is a path projection from Mid-USA to South America for this weekend. 80 meters looks good from 0000z to 0930z, peaking around 0200 to 0830, 40 from 2300 to 1000, peaking from 0030 to 0830, 30 from 2230 to 0800, peaking from 0030 to 0230, 20 around 1430 and again from 1930 to 0030, and 17 from 1500 to 2200. 15 meters should be good most days from 1600 to 2130 and on some days 12 meters should open from 1800 to 2030.

Using the same figures toward Eastern Europe, 80 meters looks good from 2300 to 0430, peaking around 0130 to 0330, 40 from 0000 to 0300, 30 around 1330 or 1400 and 20 around 1430 to 1645, peaking at 1530.

Hi,
They sent you a copy of the cancelled check back with the app. You'll need to send it back to Gettysburg this time. I didn't keep a copy of that address. Call 1-800-322-1117 tap 2 then 4 and they'll clue you in. I liked your line about the mortgage payment. My favorite 'quick' analogy is the billing system used by anesthesiologists, they knock you out and by the time you wake up, the bill is at home in your mailbox! And yep, the sun still rises.

4885. FS:DC Power Plug:Kenwood,Icom,.....

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-11 00:00:00 UTC
From: n2cjj@ibm.net
Message-ID: <53k2n5$pdu@news-s01.ny.us.ibm.net>
Source record: 215016

I have found a source for those DC power cord plugs. The ones I've got have 6 pins, male plastic with metal female (barbed) inserts.

The plug fits most 12VDC HF radios:
Icom 720, 735, 706..and alike, newer Yaesu and Alinco DX70.
Kenwood-TS120, 130, 140..430, 440, 450..850,..TS50,60, 660, 670...and alike.

Make your own power cord yourself, YOUR WAY!
Crimp or solder, long or short, heavy gauge wire, purple with polka-dots...

I'm offering the 6 position plug with 6 inserts for $4 each, or the deal 3 for $10. All prices include postage in the US.

To order, kindly send a check to:

R. Langston
286 Hudson Street
Cornwall-on-Hudson, N.Y. 12520

You can also email me for info at: n2cjj@ibm.net

It's a great deal if you use one rig at home, in the car and at work and are stuck dragging one power cord all over....

I still can't believe AES, HRO and others get $30 for a power cord.
HiHi!

I like to think of it this way, for a long time the code requirements were valid and useful for society, as there was a need for skilled operators commercially. That is no longer true. Further the problem with amateur radio has been the decline in membership. Eliminateing the code will help amateur radio increase in use. Testiing should still require technical compatance.

By elimanating the code test requirement, you are not elimanating the code. Some people really enjoy it and they still can.

One of the best things about amateur radio is there is so much different things to do, to try or to excell in.

New folks, if they want to do ATV, should be able to, if they want to do Packet or Pactor or clover they still will be able to, and if they want to play with CW or get into QRP they can learn the code because they want to and then do it.

Why should the code, today, be any different than any other mode?

And knowing CW does not mean you really understand that appliance on your desk or how radio works.

I am learning code right now (got 20 letters, numbers and some punctuation down) not because I have to, but because I met someone who has piqued my interest in QRP and now I am motivated to learn it.

Instead of debateing this endlessly - maybe you should try elmering someone new to hamming and maybe you will inspire them to share what you enjoy, or maybe, just maybe they will inspire you!.

I think the Amateur Community is not as " tuned into " electronics as it once was. With the actual queations and answers presented there is no need to learn Ohms or Kirchoffs law How many can calculate the gain to a common emmiter amplifier circuit. You do not learn that by reading a Q & A Manual.
I used the ARRL License manuals in the early 1970s. It was basically a sylibus (sp) of what one needed to know to pass the exam. Then you " hit the books " for the answers. Now you just memorize the answers to the questions. Sure some knowledge has to soak in, but the majority appears to be forgotton once " you passed " is heard . I happen to be in the business and the kinds of questions I receive have really changed over the 7 years I've been involved. Now I speand most of my time merely reading the manual verbatium to the caller who appears to be willing to pay long distance charges to be read to. Not complaining, the customer needs and abilities have changed over the years.
I have chatted with EE degreed Extra class license holders who could not cut a dipole antenna which I found amazing but true none the less.
I do agree the need for club projects, how about showing some club members how to photo etch a circuit board, or what positive feedback really does, build an antenna tuner or SWR meter Building is great fun. It's up to the builders of the community to give a hand and show the new comers what they are missing

4893. Hams help hospitals, new Web site

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-11 00:00:00 UTC
From: homingin@aol.com
Message-ID: <53kmot$br3@newsbf02.news.aol.com>
Source record: 215024

For over 15 years, the 90-plus members of the Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

--- How HDSCS organizes to support hospitals
--- What "dedicated communicators" are and why they are important
--- Frequently Asked Questions about hams helping hospitals
--- The surprising answer to "How often do hospitals need hams, anyway?"
--- Response from hospitals served by HDSCS
--- Info given to new HDSCS members
--- Recruiting hams for hospital communications
--- And lots more...

>don't know how to implement that in detail on the system I've
>got). If you have suggested reading, I'm interested.

Look at the situation this way: When the desired frequency band=20
is 300-3000 Hz a suitable sampling frequency might be (say) 11 kHz.=20
However, since you are using 44 kHz sampling frequency, you are=20
actually using 4x oversampling. The 16 bit ADC oversampled at=20
44 kHz is equivalent to an 18 bit ADC sampled at 11 kHz, provided=20
that some sort of dithering is used. After you have filtered out=20
the unwanted signals above 4.5 kHz, you could drop the sampling=20
rate to 11 kHz and do the further pass-band frequency and phase=20
response processing with 18 bit samples. This would have the=20
additional advantage that fewer coefficients are required when=20
doing narrow bandpass/bandstop filters or LP/HP filters with a=20
low corner frequency.=20
=20
I assume that the 16 bit DSP card does not handle 18 bit (or in=20
practice 32 bit) samples very conviniently, it is better to maintain=20
the 44 kHz sampling rate and operate with oversampled 16 bit samples.=20
However, the filters require more coefficents than in the 11 kHz case.=20

I don't know how much the results are degraded by using band and/or=20
equipment noise as the only dithering signal and what noise shaping=20
would be best. Dithering and noise shaping has been the hot topic in=20
the recording and hi-fi (CD) industry during the last years, so I=20
assume that quite a few books are written about it. Unfortunately=20
many books are quite theorethical, however books that describe=20
digital audio systems in general only reserve one or two chapters=20
for oversampling and noise shaping and don't go too deeply into=20
the subject. A few books that I have found interesting are=20

Principles of Digital Audio by Ken Pohlmann (it is quite old, second=20
edition 1989) and The Digital Video Tape Recorder by John Watkinson=20
(containing about 30 pages about audio ADCs, oversampling and noise=20
shaping, also contains some pages about video ADCs and use of dither=20
on video). Both books have a large list of references. But as I said,=20
most books about professional audio contain something about these=20
subjects, so browsing through the bookstore or library might bring=20
up something interesting. Processing of I/Q signals are still quite=20
similar to audio processing, but far as I understand it, direct=20
sampling of RF is quite different.

>>>but to recover the more complex waveform
>>>of QPSK, I need more bits. 4 may do, but 8 works lots better.
>>
>>If you want to tranfer 28.8 kbit/s through a 3 kHz channel (e.g.
>>ordinary phone modems) then 8 bits certainly makes sense. However,
>>when transfering 2 bits/symbol in QPSK even 4 bits sounds quite a lot,
>>particulary if the sampling frequency Fs is a few octaves above the
>>tones of interest, when some extra resolution can be obtained from the
>>dithering effects of band and/or equipment noise.

>The only way I know to do I/Q demodulation is to make a final decision
>based on the results of two level decisions on each axis, and zero is
>disallowed (because it would represent no signal). Seems to me I need a
>very minimum of 3-bit samples on each axis, 4-bits are better.=20

I would intuitively do it like this, but there are probably better ways:

Assume that you want 4 bits (16 levels) for your final decission,=20
but these 16 levels do not have to come from the same sample in the=20
oversampled system. If we look at your system as an 11 kHz system=20
which is 4x oversampled at 44 kHz, then you should add the values=20
from four samples before doing the decission. Each (over)sample=20
has to contribute only 4 levels or 2 bits. Or you can think as an=20
18 bit system sampled at 11 kHz, in which the proper downsampling=20
from 44 kHz to 11 kHz provided the 17th and 18th bit. The net effect=20
is that the peak to peak signal amplitude has to be only four times the
quantization step of the real (16 bit) ADC.=20

If you can do "integrate and dump" detection with your DSP card,=20
i.e. accumulate all sample values during the incomming data symbol=20
period (say 1 ms for 1 kbaud system) before the final decision,=20
then it does not matter if you accumulate eleven 18 bit samples=20
at 11 kHz or fourtyfour "oversampled" 16 bit samples at 44 kHz.

Once more it must be stressed that the input signal must contain=20
some form of dither in order to gain some extra resolution with=20
oversampling. If the input signal is bandlimited at the final=20
bandwidth prior to the ADC and the noise level is far below the=20
quantization step and no dither is used, adjacent (over)samples=20
usually have the same value and no fractional values can be=20
extracted during downsampling.

Kevin Potter (us66kix@west.net) wrote:
: Is there a contest-free weekend anytime during the year?

First of all Kevin, I think the use of perjoratives does not serve your purpose. With that in mind....

All three of the WARC bands are contest free. With only a few exceptions, most contests are single mode. Operate the other mode. There are only a handful of large/major contests (CQWW,ARRL DX, WPX, SS, FD) that generate a lot of activity. The balance leave the bands pretty uncongested.

FINALLY, there are no contests left that occupy more than a 48 hour period. Even if there were a major contest EVERY WEEKEND, for 48 hours, that would only be 104 days (52 weekends X 2 days/weekend) out of 365 days in a year or ONLY 28 %. This is assuming that you operate 48 hours continuously every weekend. I don't think you have much to WHINE about.

1) Change modes
2) Work the WARC bands
3) Operate during the week when there are major contests on
4) Quit whining and give other amateurs the opportunity to enjoy a facet of a hobby that we enjoy and have earned the right to do so.
5) Take your wife/girlfriend/spouse out to dinner. Maybe you would be a calmer person and enjoy life a little more.
6) Grow up.

I have for sale a IC-781 with the SP20 external speaker w/filters and the SP20 deluxe microphone. Unit has the Voice module installed. Works great except that the antenna tuner does not work right. Am getting out of hobby for awhile due to extensive traveling coming up and would like to offer this rig to anyone for a great deal at only 3000.00 Thats a savings of almost over 4k$$+ if everything was to be bought at new cost. serious enquiries pse e-mail me for further details. This rig puts out over 150 watts as rated to do. so antenna tuner being out has caused no harm in the finals. Never bothered to have fixed as I always used resonant antennas. Offering for heck of a savings due to the inconvenince you would have waiting for repairs or your time in fixing it for your knowledge of radio repairing would give you the best deal ever for this nice radio. Thankyou for your time in reading this n8fcf@onramp.net

It will certainly encourage a new generation of pirates! I think that
we will be seeing lots of new activity on the hf bands and also lots
of interference on bands above 50 mhz.

The FCC has been a real disappointment to all I believe. Since the non-enforcement of CB started, its been downhill for them. They are quick to get into your pocket, but real weak in enforcing the rules.

Most people have weekends off so putting contests there deprives MOST
real people
of the decent ham frequencies. Since there is so much time available put
the contests on between 12 mid to 6 AM Monday-Friday.

So in actuality the contest pig eats most of the PRIME time.

Well, just drop by the QRP list at lehigh.edu sometime. The group is highly devoted to homebrewing, and is growing every day. In addition, just look at the number of kit companies and construction-oriented clubs that have popped up in the past few years. Granted, QRP is a niche market, but it is still a *growing* niche market, and doesn't show any signs of slacking off.

this
>could be a relative's or previously-held call, I suppose, but wonder if
>this is one of early Gate two issues?
>

Well, just checked out yesterdays FCC dump on QRZ, and there's another one: N8JW, issued on 10/9 to individual with those initials. Is it likely that this is a relative, or previously held call? Doesn't seem so to me. First, N#xx calls were first issued in the seventies, so no one has held them for a really long time, or would seem likely to dump them for the 2X1 and 2X2 extra calls that followed. Second, there is no Jr., III, etc., after the name, so it seems unlikely that these individuals are sons with same name as father.

So what is going on here? On the one hand, we have official bulletins saying this process will take weeks. On the other, there seem to be a few calls slipping through. I'm still hoping this is the trickle before the dam breaks, and all calls are issued, but wonder if FCC is following their own stated procedure closely enough.

: Tuck:

: The candidate who we in the Central Division were denied the opportunity
: to vote for by Mr. Sumner is Mr. Henry Ruh, the publisher of Amateur
: Television Quarterly Magazine. He is very well qualified for the office
: of Division Director. The "sin" which Mr. Ruh committed which
: prevented us from having the opportunity to vote for the much needed
: change was that he "made money off or Amateur Radio through his
: magazine."

: Actually, in his best year, Mr. Ruh only reported a net operating loss
: of about $12.00 on his Federal Income Tax from the magazine which is not
: really a business meant as a money maker but is rather a labor of love
: designed only to be self supporting. Mr. Ruh even offered to sell the
: Magazine if he would be allowed to run for office.

This is hardly and "arcane" rule: as I recall it's clearly stated in the
published guidelines for candidates, and is, I believe, a part of the

By-Laws of the ARRL. It's only "arcane" if it's secret: this isn't.

Perhaps Mr. Ruh would start to make money if he were able to steer ARRL policy WRT ATV. Perhaps not. I don' know him, and I don't question his altruism in running for the Board. Others certinly _WOULD_ use a position on the BoD to line their pockets, given the ability to run and win.

Preventing the appearance of wrongdoing on the part of our elected officials is an important goal, and I, for one, want Directors to serve the ARRL membership and Amateur Radio, not line their pockets.

If you don't like the rule, work to change it. Start by explaining why it _should_ be changed.

Looking at the FCC database and the explanation of codes associated with
these entries (see the readme.txt file in /pub/XFS_AlphaTest/amateur), it's
clear that neither of these calls are vanity callsign issues. They
appear to simply be renewals. It's pointless to conjecture
on whether the FCC is "breaking their own rules" unless you're certain
that these were, in fact, vanity callsigns. The evidence is that these
most certainly were not.

>code tape to work with and learn code properly? Gary

I'd avoid all the tapes. They are too easily memorized, and aren't paced
to the rate at which you most efficiently program your wetware. Use one
of the computer training programs, SuperMorse or Morse Academy are a
couple of good ones (check the usual download sites like oak.oakland.edu).

Learn the character sounds from the very beginning at a 20 WPM rate,
spaced to give lower effective speeds. The programs will do this for
you, calling it the "Farnsworth Method". This is important since ARRL
VEs will use Farnsworth timing in the exams that they administer.

It is also important because it will force you to recognize the
character sounds as a unit rather than breaking them down into
dits and dahs. It's that extra translation step which forms the
barrier at about 10-12 WPM which stalls people who learn the code
as dits and dahs rather than as character sounds. This speed "hump"
is what causes the most problems for people attempting to learn
Morse. Avoid it by learning initially at a faster rate.

You want code copy to become like touch typing, IE automatic reflex,
you don't think about it, your body just does it. There's a method
of presenting the letters, called the Koch method, which can help
you efficiently learn the alphabet in this fashion.

Don't try to send until you can copy easily at your target speed.
This is important because sending is a mechanical process, and
forces you to think about dits and dahs. You don't want to do that
while you're learning code. Think of it as indivisible sound units
which are just different pronounciations of the letter names.
Once you're trained to recognize good code, sending is trivial
to pick up, you just make the sounds you already know, sort of
like playing guitar by ear.

When I turn on my PC, (486-33), and use it at the same time I have my HF rig running I get noise on the HF receiver caused by the PC.
I can tell when my hard drive is accessed, I don't even need to look at the controller access LED, my HF buzzes and crackles.

Now I know it's time to upgrade but anybody have any suggestions on how to quiet, actually suppress, the RFI from the PC??

When I buy a new mother board should I look for an FCC certified type, if it exists??

You need to do a little detective work first! The Licensee for the DW call was
licensed on 1/20/87. Same guy, same address. His license was due 1/97, so he was
4 months early on re-upping it. There is enough confusion abounding without
adding more.

Last week (10/1 - 10/4) I put a plea for help for info on Cubic Electronics in Ocean Side, Ca. Some very nice gentleman gave me the info I needed. I have since had a complete system crash and lost ALL my messages...in fact I lost 2 hard drives with everything on them. The only thing I remember about the message was that his address started with something like "HONT"..his name was Loenk (?), The important thing was, he gave me the name of a guy that had worked for Cubic. He said the guy still repaired Cubic radios for a fair price. H ealso said the guy had a fax on during the day but in the evening it was off line. He gave me the telephone number and all the info I needed. I can't remember which newsgroup it was in. If he will PLEASE contact me again I would appreciate it very much. I need the same info again.

I am posting this to all the ham and radio newsgroups to find this good samaritan again. I sent him a thank you message, but of course that is also gone now so I can't get the address from there.

Carl,
First things first. Who cares about the FCC? Second, I
understand that Amateur Radio can play an important role as a service.
(hence the I agree with ...). However it is primarily for enjoyment.
Again you can't make a living at it. It's not proffessional. I don't
mean to demean the purpose and role of radio at all. It is extremely
important to me, but I won't go shoving it down people's throats that it
is an essential service. Ambulance chasers is what I call them.

Radio to me is interesting, fun, important, etc. I love it. But
I won't try to justify that by making claims that it is anything else but
that.

What scares me about saying it is a service is that people who are
just having fun on radio will get pushed aside for service renderers. You
know, "HEY THIS FREQS FOR A NET FOR BLA BLA BAL SO STAY OFF THANKS."

Let's not forget that G.R.S. is a service too (General Radio
Service), where's the FCC regulating that service?

>that it's not "HAM," but "ham." Incorrectly spelling it uppercase makes
>it look like an acronym, thus causing people to run around trying to
>find out what it's an acronym for!

The problem is, we don't know that it didn't start out as an acronym.
If we believe the Harvard radio station story, it was, or if we buy
into the Home Amateur Mechanic story, it was. If we accept it as an
insult, as in "ham fisted" or "ham actor", then it wasn't an acronym.

Of course today it has become a noun (and an adjective) by common
usage, so it doesn't require capitalization unless it begins a
sentence. If you are a Morse operator, however, it *is* HAM, since
Morse has no provision for lower case.

>record," such as speeches made by members days or weeks after they
>boarded a plane or boat which crashed or sank, killing them.

Actually, this practice appears to have started in earnest near
mid-century, and continued until 1994 when the House rules were
revised to indicate that an addition was post hoc. Members can
still insert post hoc comments in the Record, but no longer as if
they were part of the actual floor debate. But the actual transcripts
of debate on the floor have always been in the Record whether other
things were added later or not. If the speech were made, it would be
in there. But it isn't in there.

>>Another theory holds that it derives from what commercial
>>operators called amateurs. They referred to them using the

>It would not be implausible then, for what started out as an insult to
>later become adopted by the target group as a self-deprecating nickname
>to be worn with pride.

As we know, "bad" can mean "good" in street lingo. Gangs and military units have adopted rather insulting names from time to time as a sort of "in your face" rebuttal to those originally casting the insult. So this is a plausible explanation. Another usage of "ham", in the acting profession, might also be the origin of the term. The World Book Dictionary backs this version, suggesting that the slang terms "ham actor", "hamming it up", and "radio ham" all have the same origin (that of overstating their skills and abilities).

>>A third theory derives from the fact that Hugo Gernsback published
>>a magazine called Home Amateur Mechanic in the early days of radio
>>and it included many radio construction projects. Thus when asked
>>what sort of radio a person had, he might send back that he had
>>one of those HAM radios (using just the initials of the magazine

>
>Here's a few more apocryphal (read: likely wrong) ones:
>
>- Home Audio Modulation (variation on the Hugo Gernsback story; has
> anyone confirmed that the Home Amateur Mechanic periodical actually
> did exist? It has the speciously-documented flavor of the "HAM/
> Congressional Record" story)

Home Amateur Mechanic magazine most certainly did exist. It was one of many magazines published by Gernsback. And it did have many radio construction articles. Whether it is the origin of the term or not isn't documented, but it did exist, and it did publish a lot of radio plans in the early days (pre-WWI). After WWI, Gernsback split the magazine into two parts. I don't recall the new name for the radio side, but it continued to exist. I think it eventually became either Popular Electronics or Radio and Electronics. I recall that one of them had the Gernsback logo in its masthead in the 1960s.

>- From the Cockney pronunciation of L'Amateur

I think this is almost certainly not the origin of the term. It was
in common use in the US from very early times, before trans-Atlantic
contacts between amateurs occurred. The largest group of radio amateurs
in the early days was in America, thus I'm pretty confident that the
origin of the term "ham" is American.

I'm trying to take a 90's approach. Just got in my box of minicircuits
VCOs, and made a logarithmic amp from the National Semiconductor data
sheet for one of their opamps... Together with info gleaned from KK7B's
direct conversion receiver, a spectrum analyzer is my next project.

With a VCO and a mixer, a nice 0-50 MHz VFO should take up the size of a
pack of cigarettes, and is also on the project list.

If it could be shown that the "hobby" generated sufficent revenue, and
a real commercial lobby existed, then believe the allocations could
be justified. Do I think this will happen anytime soon? No. I'm still
seeing 'hams' chasing off "digital experimenters" when they ask
questions
on some of the amateur newsgroups. If 'ham' radio can ever drop its
socialist mindset, (PROFIT = dirty word) we
might have a chance of having a viable service that can stand on
its own two feet.

Sadly, I must agree with you at this time.

-Jeff wb8wka

4922. Gate 2 being issued?

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-11 00:00:00 UTC
From: k0hb@hamlink.mn.org
Message-ID: <845025912.AA07437@hamlink.mn.org>
Source record: 215053

JOHN MITCHELL asked:

JM> Happened to spot an apparent Gate two call N6DW in Thursday's
JM> run. Issued on 10/8 to an individual with first and last
JM> initials DW. Now this could be a relative's or previously-held
JM> call, I suppose, but wonder if this is one of early Gate two
JM> issues?

False alarm, John. That transaction was not a "vanity" action
but just a renewal.

73, de Hans, K0HB

4923. HAMFEST - Lindenhurst, LI -Oct 27,1996

Newsgroup: rec.radio.amateur.misc

Sunday Oct 27,1996 9am-4pm

Great South Bay Amateur Radio Club Joint
HAMFEST / COMPUTER SHOW

At the Knights of Columbus Hall
400 South Broadway
Lindenhurst, NY

General admission: $5.00

ARRL APPROVED HAMFEST

All In-Doors. Eighty (85!) tables. Featured items will be:

Computers and accessories, Software.
Books - Technical manuals
Radio equipment, Electronic components,
ARRL Information, VE Exams(12 NOON),
Flea Market.

Vendor information:
Tables (2.5' X 8') $15.00 advanced payment, $20.00 at the hamfest door.
Each space admits one person. Additional personal $5.00. No tables
reserved unless prepaid. Limited electricity available. .
Doors open for sellers at 7:30am.

Food service provided during Hamfest by members of the Knight of
Columbus Council.

Directions:

Southern State Parkway -Exit 35 (WELLWOOD AVE.) SOUTH, crossover
NY 27 (SUNRISE HWY). Continue SOUTH to south side of RAILROAD,
make RIGHT onto HOFFMAN AVE. Continue WEST 3 blocks to SOUTH
BROADAWY, turn LEFT. Go past traffic light 2 BLOCKS.
Knights of Columbus Hall is the LEFT SIDE of street.

Sunrise Highway (NY 27) -to WELLWOOD AVE. Go SOUTH, follow directions
as above.

Montauk Hwy (Merrick Rd.) - Direct to SOUTH BROADWAY, 3 blocks WEST
of WELLWOOD AVE.

Talk in on WB2FKZ/R 146.685 (PL 4Z - 136.5 Hz) and 223.86 (Open Carrier)

Additional info: Telephone evenings only! (7pm-10pm):

Actually I think Gate 2 calls are still not being issued. I looked at the calls issued on 10/9 and all of them list "close relative" as the reason for getting the call so they're still Gate 1.

Guesses range up to a couple of weeks before the FCC gets all of the Gate 2 applications entered into the computer. Only then will the lottery take place.

An interesting theory. Can any beneficiary of a Gate 1 or 1A call
change tell us if their new license was for a new full 10 year term?

A friend of mine got her father's old call in June, and her license is
good for ten years from that date.

In <53o7dk$5qd@nntp-3.io.com>, kk5dr@io.com writes:
>Will it be alive, as we know it, in 10-20 yrs.? Your opinions please.

Emphatically no, not "as we (collectively) know it today."

If fact for amateur radio to survive at all, we do a lot of catching up with the rest of the world in a technological sense and make some major corrections to both our "self-image" and our public image.

For the most part, in technology, where hams USED to be the leaders and inventors, we're now the (reluctant) followers, at best ... the outright resistors, in many cases ...

Our use of sprectrum is abysmally inefficient ... the Part 90 Public Mobile Radio Services have new standards in place that will force them to be at least 4-6 times as efficient in their use of spectrum than current "narrowband FM" technology used at VHF/UHF ... we need to do as well or better, or the regulators will soon view us as backward and wastefull ... this will lead to loss of VHF/UHF/microwave spectrum through reallocations and auctions ... the response to this threat is simple ... we need to invent (or at least adopt) new techniques that put ua at the forefront of spectral efficiency, rather than the dark ages, and we need to complement this with SIGNIFICANT growth to boost our numbers.

HF, while "safe" from threats at this instant, will come under increasing pressure as commercial and government users realize that satellites are not the panacea they were once thought to be. Using new technologies, HF can be very cost-competetive and efficient for many types of long-haul point-point and point-multipoint operations. Our HF bands WILL come under pressures ... again the necessary response to the threat is adopting better technology and increasing our numbers.

Our "self-image" is a BIG problem.

Far too many in our ranks have come to view ham radio as "just a hobby."

This is NOT how the regulations spell thing out ... the Amateur Radio Service, as defined in Part 97 of the FCC's Rules, is a SERVICE, with clearly delineated justifying purposes and goals ... NOWHERE is the word "hobby" seen even once ... there is also NO mention of contests, chasing DX, or even rag-chewing, though those activities are not specifically prohibited.

The problem arises because the vast majority of current hams think "it's just a hobby" and have convinced themselves that contests, chasing DX, and such ARE the REASON FOR BEING of the Amateur Radio Service ... To

quote Bruce Willis "BZZZZZZZZTTTTT, WRONG ANSWER!!!!!"

Too damned many current hams, particularly OTs with higher classes of license, think that the bands are "theirs" ... that they are "owed" the use of the spectrum ... and that the REAL reason that ham radio exists is for their personal enjoyment, as exemplified by their participation in the (insert name of contest here) or some similar gaming activity. They proudly show their collection of "wallpaper" which attests to "their tremendous accomplishment" of contacting ### countries. (BFD ... this IS the 1990s!!!)

This attitude has caused MANY problems in ham radio today, and we have to change the attitude and solve these problems if we're to stand a chance of survival in the future world of increasing demands for communications services and the attenant pressures to "find homes for" new services (in a spectram allocation sense).

In this area, we need to retrain those who think "it's just a hobby" so that they realize their responsibilities to the service and the community ... that they have a "debt to society" to pay through self-education, technical advancement, and public service and emergency communications in exchange for the use of so much extremely valuable spectrum.

This is, obviously, not a complete solution to each and every problem in ham radio ... that would take a lot more space than this, but it's a starting point for discussion in the areas that need the most attention.

Body handling: 1 inline base64-encoded payload block was not displayed

Content-Type: text/plain; charset="us-ascii"
Content-Transfer-Encoding: quoted-printable

Let's face it... code is becoming more of an "obstacle" than it was =
before. Hams sit around and want to get all of their privileges for =
knowing some simple electronic basics. I FULLY support the code test. =
Even though I only have a Tech Plus and know the theory for General, I =
want to work for it. Hams should have to work to get their licenses. =
I feel the current system is fine... an entry-level license with VHF =
capabilities, and code tests for the rest. Morse is readable under all =
conditions. The main reasons for hamming are, in order of importance:

1. Emergency Communications
2. Technical Development
3. Personal Communications

(pardon if I forgot one)

But... as you can see... emergency communications is #1 on the list. =
Morse is *THE* most readable type of communication under extreme QRM. =
And, most home-brewers learn by building a Morse transmitter and =
receiver. If we abolish the code test, we eliminate the primary =
introduction most hams get to Morse. I remember this one thing I read, =
and *NO*, I don't remember where, but someone's Jeep rolled over, and he =
couldn't talk for some reason, but he sent Morse with the RTL. (PTT for =
most of us) (RTL =3D Release To Listen HI HI HI). I admit, I don't know =
Morse very well, but I know it some. I have a Tech Plus ticket to prove =
it. Anyone want burnt spam? (I'll probably be spammed and flamed over =
this...)

4939. US License Examination Opportunities Scheduled 10/12/96 to 12/31/96

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-12 00:00:00 UTC
From: "Bart Jahnke, KB9NM ARRL/VEC" <vec@arrl.org>
Message-ID: <32603AC5.3EAD@arrl.org>
Source record: 214871

This page was last revised October 12, 1996.

You can Email the ARRL/VEC (or this page's content
administrator) at "vec@arrl.org".

*****>> When viewing this list, if the list appears to be cut
off (stops somewhere in the middle of the state's listings)
try downloading the entire file then viewing it off line.
Some WEB browser programs have exhibited this problem.

****

Have you recently passed your test? Find out your new call sign and/or
license privileges using the following World Wide Web URL (or by using
the phone number shown below):

http://www.ualr.edu/~hamradio/

or look for this link from the ARRL WEB page at

http://www.arrl.org/

At ten (10 days) after the test session call 860-594-0300.

****

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 10 days since you took you examination?

If so, Call ARRL at 1-860-594-0300 (8 am to 9 pm weekdays, eastern time)
to find out. We suggest that you not call the FCC (should you choose to
call the FCC at 1-800-322-1117 during business hours, be aware that their
number is normally busy).

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

****

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether they be for the Reciprocal Permit for Alien Amateur Licensee, Form 610-A; Club/Military-Recreation/RACES station, Form 610-B; or Form 610 for Amateur Operator/Primary Station License. FCC Form 610-R is a computer generated renewal form that will be sent from the FCC (beginning September 1995) to licensees whose license is to expire within 90 days. Form 610-V is the special application for persons seeking a Vanity call sign (see below).

Several FCC forms, including Form 610, are available through the FCC's fax-on-demand service by calling 202-418-0177 (request form "000610" for Form 610, form "006108" for Form 610V).

You can obtain FCC Form 610V along with FCC form 1070V and FCC vanity call sign information fact sheet PR 5000, number 206v) by writing ARRL, 225 Main Street, Newington, CT 06111. You must include an SASE.

Form 610 or other forms, including Form 610V, are also available from the FCC via the internet at:

http://www.fcc.gov/Forms/

or

ftp://ftp.fcc.gov/pub/Forms/

The FCC Forms Distribution Center will accept FCC forms requests by calling 800-418-3676.

****
VANITY CALL SIGNS - SUBMITTING YOUR APPLICATION VIA THE WORLD WIDE WEB

Vanity Call Signs can also be applied for, in the appropriate eligibility Gate, at the appropriate time, by using the following URL:

http://www.fcc.gov/wtb/amradsrv.html

****

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 860-594-0301. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to MCI ID: 215-5052.

****

THINGS TO BRING TO EXAMINATIONS

Bring a photo ID along with a second form of identification (else bring two non-photo forms of ID); bring your original FCC license and a photocopy of your license (if you are currently licensed); bring the original and a copy of any Certificate(s) of Successful Completion of Examination (CSCEs); if necessary, bring a scientific calculator (that does not have the ability to store formulas); bring a pen and two pencils; and be sure to bring payment for the test fee if charged by the VEC.

****

EXAMINATION CREDIT IS AVAILABLE AS FOLLOWS

By presenting an original, current FCC-license, the following exam credit will be conveyed to the applicant by the VE Team:

Novice - Elements 1A and 2
Technician (dated after 2/14/91) - Elements 2 and 3A
(*)Technician (dated before 3/21/87) - Elements 1A, 2, 3A and 3B
Technician Plus - Elements 1A, 2 and 3A
General - Elements 1B, 2, 3A and 3B
Advanced - Elements 1B, 2, 3A, 3B and 4A
Extra - All elements

Footnote:

(*) For grandfather Element 3B credit, only an original license or a copy which was issued on or before 3/21/87 is acceptable by VEs. VECs may be able to allow such credit based upon an original CSCE issued on before that date which shows Element 3 credit for passing the (then) 50 question Technician/General written test. If such documentation has been destroyed, the FCC will itself issue the necessary verification. To obtain such verification, acceptable by all VE Teams and VECs, write to FCC and request a "Letter of Verification of Technician License Held Prior To March 21, 1987". Mail (or fax 717-337-1541) your request to: FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245. If you include reference to a fax number in your reply, the FCC will fax your verification letter to you. Normal turnaround at FCC is 3-5 business days after receipt.

By presenting an original Certificate of Successful Completion of Examination (CSCE), the following credit is conveyed:

* For Technician licensees: A CSCE showing Element 1A, 1B or 1C credit qualifies the holder for Technician Plus HF privileges. The CSCE may have been issued more than 365 days earlier.

* For others: A CSCE issued up to 365 days earlier conveys credit for the element(s) shown as passed. A Physician's Certification on a Form 610 is acceptable by a VE Team for 365 days after the Physician's signature date. Once accepted by the VE Team, assuming the applicant qualifies for a General or Advanced license,

a CSCE is issued showing Element 1C (or "Physician's Cert. and Release: 1C") credit is valid for 365 days toward an Extra class license.

****

LOST LICENSES

If you have lost your license, you can obtain a duplicate by writing to: FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245; indicating that you lost your license and that you are requesting that a replacement license be issued to you. You may fax your request to FCC at 717-337-1541.

****

ACCOMMODATIONS FOR THE HANDICAPPED OR DISABLED

The FCC requires that the administering VEs must accommodate an examinee whose physical disabilities require a special examination procedure. To do so, the administering VEs may require a physician's statement indicating the nature of the disability before determining which, if any, special accommodative procedures must be used.

The VEs may accommodate handicapped/disabled examinees by administering the examination at a place convenient and comfortable for the examinee--even at bedside; for the hearing impaired the Morse code may be sent using flashing lights or a vibrating surface; for the visually impaired, VEs may read or write for the examinee; where warranted, the VEs may pause the Morse code message after each sentence/phrase, or each word, or even after each character to allow the examinee additional time to absorb and interpret what was sent--also the VEs may substitute a sending test for a receiving test where the examinee's handicap warrants.

VE Teams may need advanced notice in order to provide the necessary accommodations to examinees who require them. If you will require accommodations, please contact the VE Team in advance to advise them of your needs.

EXEMPTION OF THE 13/20 WPM MORSE CODE REQUIREMENTS

If you are a severely handicapped or disabled individual and have already passed at least a 5 WPM Morse code examination (or hold a license which meets that requirement), you may be eligible for exemption from the 13/20 WPM Morse code examination requirements. See the back of a current FCC Form 610 for details.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 860-594-0300 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "vec@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,Zip-code,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1996 test fee is $6.05.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546. No fee.

C = Central Alabama VEC Inc., 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-832-6803

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, (n) 301-317-7819 or 301-588-3924

M = The Milwaukee RAC Inc., PO Box 25707, Milwaukee, WI 53225;
414-466-4267.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068-0011; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926.
No fee.

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000. The 1996 test fee is $6.00.

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
910-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 423-688-7771. The 1996 test fee is $6.05.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1996 test fee is $6.05.

Of course you are correct. But I can prove Tim Smith made the false
charge.
The real Tim Smith would never apologize.
I know you cannot prove me a pervert. How would I absolutely know that?

I use my call because old friends can recognize it and one recently did.
Yes I like the OINK in my call. A recent QSL card I had was bright pink
with a pig on it saying "OIK OIK"

> Burt, get help before it's too late.

I am not the one call CQ Contest while my wife leaves me.

I write garbage? What was that above? Sweet nothings in my ear?
Also you lied about me claiming you had a source.

4942. Re: ~FCC closes down all 12 monitoring stations

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-12 00:00:00 UTC
From: Jim Reese <jimreese@voice.acun.com>
Message-ID: <Pine.LNX.3.91.961012203233.19521C-100000@voice.acun.com>
Source record: 214874
Cross-posted to: rec.radio.amateur.misc,rec.radio.cb,alt.radio.pirate,rec.radio.scanner

Based on my dealings, as a commercial broadcaster, with the FCC, I suspect the agency's budget has been gobbled up by bureaucratic nonsense. Paperwork became the top priority. We were FAR more likely to get handed major fines for an incorrect entry on an EEO form than for some transgression that really mattered.

It isn't that the rules aren't being enforced, it's that priority is being given to enforcing STUPID regulations. That gives the appearance that the FCC isn't doing their job. But, then, I guess they aren't.

I wonder if the people of Virginia Beach really gave a damn that I had a Native American as a Sales Manager. Or would they have been more concerned if my transmitter drifted off frequency and raised havoc with air traffic control at the naval air station a few miles away?

Jim

Does he challenge people to think by calling them"pigs"? He has
spammed other newsgroups with his pompus and vile views and
in my opinion, has nothing to do but sit behind his computer write
his garbage and wait to die.

4945. Amateur Radio Exam session, Smithfield, NC

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-12 00:00:00 UTC
From: Dave Hockaday <wb4iuy@ipass.net>
Message-ID: <326019F1.388F@ipass.net>
Source record: 214877

The next scheduled Amateur Radio exam session in Smithfield NC is this coming Saturday, Oct. 19.

The Triangle East Amateur Radio Association (TEARA) holds monthly amateur radio exams In Smithfield NC. The tests are held upstairs in the Smithfield Public Library at the corner of Market St. and 3rd St. The tests are on the 3rd Saturday of each month. There is no pre-registration requirement, and test registration begins at 9:30 A.M. sharp. 610 forms are supplied, and the test fee for 1996 is $6.05. The applicant must bring photo ID, any licenses/CSCE's that they have, as well as photocopies of same.

Talk-in is on the following repeaters (they are linked full time): 147.39+ PL 88.5 in Clayton, 442.400+ in Wendell, and 147.30+ PL 88.5 in Wilson. Further information can usually be obtained on the above repeaters, or drop an email to the adress below.

The schedule for the remainder of 1996 is as follows: Oct. 19, Nov. 16, and Dec. 21.

>Thanks for reading SEB.

I presume you are asking about receivers that convert from
RF down to audio in one step. The Radio Amateur's Handbook
published by ARRL. My 1986 edition has a schematic and one
page of discussion on a typical design. It is page 12-8 of
this edition. Check the index for Direct Conversion
Receivers in other editions.

These receivers have lots of problems from front end
rectification of strong local AM signals. This can be
helped with additional RF selectivity and tuned RF
amplifiers.

The receivers are also prone to hum modulation caused by the
local oscillator signal radiating into the power line, being
modulated by the power line frequency, and then received by
the receiver antenna. The oscillator must be very pure to

avoid reception of frequencies at harmonics of the LO
frequency. Again a tuned stage of RF amplification should
help. Good luck.

> USPSA/IPSC # L-1192 NROI/CRO NW of Columbus Ohio

In this case, the sale of the magazine was arranged prior to the election. The buyer and seller were making the final arrangements, all prior to the deadline and while all of this was in the process of going down - prior to the deadline, Mr. Sumner declared Mr. Ruh's candidacy nul and void before the deadline passed.

Sounds to me like Mr. Sumner was a bit over zelous on enforcing the conflict of interest rule since he jumped the deadline and declared Mr. Ruh's candidacy null and void.

Sounds to me like Mr. Sumner made this election a sham.

Sounds to me like some reforming needs to be done, like when the deadline is needs to be better defined, like what a deadline is needs further explanation, etc. so candidates who want to reform the League have a fair opportunity so members like me have the oportunity to vote for something other then politics as usual.

Bill - WA8HSU - ARRL Member # 1233411

Yes, this will allow more discussions of medical problems, guns, militia group of the month and other useful topics.

What is it exactly that you anti-contesters want? Totally QRM-Free bands? Good luck!

I still stand by my original math.

For a phone DX contest
1) All bands, with the possible exception of 20M and 15M during periods of high solar activity, will have plenty of open space still available. The WARC bands will be COMPLETELY available to non-contesters.

2) The CW and Digital portions of the bands will be completely unused by contesters.

During CW contests, band congestion really is not much of a problem. There is always room higher up in the band.

I am really at a loss as to what the anti-contesting crowd is bitching about. If I had to venture a guess, I'd say that they resent the better equipped stations, technical advances and operating skills that most serious contesters exhibit.

The issue is certainly not spectrum utilization, more likely spectrum bigotry.

Hello, Folks:

I have just put up my new home page and invite all to drop in for a look. Included at the site are the following areas:

Ham Radio -- Mostly packet, mostly high speed

Pipe Smokers -- Very, very much still under construction

Astronomy -- Mostly Amateur Radio Astronomy (good 2nd interest for Hams!)

Mapping -- Mostly about elevation maps

Heartland Internet Services -- Lots of Web Presence information

The URL to use is:

http://www.trucom.com/ppages/marty

Thanks!

Take Care & 73

Hello, Folks:

On October 13, 1996 the Eastern Ozarks Amateur Radio Club (EOARC) will sponsor a Fox Hunt in St. Francois County Missouri.

Sign up will be from 1300-1330 at the Mineral Area College parking lot in Park Hills (formerly Flat River) and the Hunt itself will start at 1400.

Entry is _FREE_ but you must register!!

Maps of St. Francois County will be provided.

The Fox will live on 2m FM simplex and the exact frequency will be announced by the Fox at 1400. The Fox will be somewhere in St. Francois County.

Certificates and ribbons will be awarded.

From St. Louis, take Interstate 55 south to US highway 67 south to the Leadington/Park Hills exit then turn left.

From Cape Girardeau, take Interstate 55 north to US Highway 67 south as above.

From Poplar Bluff, take US Highway 67 north to exit as above and turn right.

You may call on the EOARC repeater on 147.030 (+600) for talk-in.

All Amateurs are welcome and encouraged to attend!

Take Care & 73

In the past, the FCC *micromanaged* the spectrum and its users.
This often had a stifling effect. The classic example is the
broadcast and cable service where the regulations fill a book 4
inches thick. A few years ago, a different doctrine, that of
deregulation, swept government. The main thrust of this idea
is that the marketplace is a better method of managing resources
than government regulation. Thus many of those regulations were
waived or eased.

Now the marketplace, and the competition it spurs, is a rough and tumble place. It has a Darwinian quality of survivial of the fittest. While this allows the cream to rise to the top, and fosters a better product, it also allows sacred cows to be gored. Entrenched interests have screamed for renewed protection as new competitors, new methods, and new services have arisen to compete in the marketplace. Some of the entrenched interests are threatened by new ways. Now some of the new ideas, products, and services fail as well, but some of them have become very successful. This is the nature of a free market. The weak idea fails and the strong ones survive. This is how progress is made.

Holding a government license was once almost a grant to print money for some. By giving a monopoly to one entity for a certain slice of spectrum, the government ensured that competition couldn't keep the grantee from gouging. And license grants also limited the opportunity for new services to use spectrum in new ways. This was stultifying. That's changing now. Change is always disconcerting to entrenched interests.

In many ways, the government hasn't gone far enough in deregulation. Half measures are often more chaotic than fully revolutionary change, or than no change at all. We're in a situation now where the marketplace is not fully free to work, yet the old government strait jacket no longer works either. The current situation is neither fish nor fowl. That's not good.

As regulations have been eased, enforcement has been reduced. This is not wise. As regulation is stripped to its essential core, it becomes more important than ever to enforce those core regulations. Many of the nitpicky regulations which were once enforced with such zeal are now gone, but among the regulations which remain are the important ones required to prevent complete chaos. No market can function freely if bandits are free to roam its stalls and savage merchants and shoppers. Freedom of market entry is good, freedom of competitive action in the marketplace is good, but those who abuse that right of entry and competition have to be apprehended and stopped from further depredations.

Enforcement is a hard job in a free market. On the one hand, competition must not be stifled by heavy handed application of nitpicky regulations. There must be winners and losers in the marketplace. This is essential to competition. Entry into the marketplace cannot be denied just because some existing merchant might be harmed. But wanton acts of vandalism and theft must be stopped. The line between fair competition and banditry must be maintained.

It is hard for enforcers to stand idle. The natural tendency of enforcers is to *act*. If they can't find cause to act, new regulations are created to give them cause to act. This is the primary danger of government. Government is often not wise enough to stand by and let things proceed. OTOH, there

are times when government enforcers *must* act. Determining
which is which requires a degree of wisdom and judgement too
often lacking in government. It is usually better to err on
the side of too little enforcement than to err on the side of
too much. It is better to suffer a little vandalism and banditry
than it is to suffer under the yoke of oppressive government
regulation. Freedom is more precious than safety.

An interesting theory. Can any beneficiary of a Gate 1 or 1A call
change tell us if their new license was for a new full 10 year term?

Is it Commission policy to issue a fresh 10 year license after any
license change? It sounds just all too sensible, practical and
paperwork saving to be true :-)

If it is so, the FAQ's should be amended to explain that a license
can indeed be renewed at any time so long as a change requiring the
filing a Form 610 is made. Just add or remove a middle initial or
changing the punctuation of the address should do it.

Hi Arden:

Burt is well known not only on Cape Cod, his seemingly harmless antics (regardless of intent) are far reaching. His association with the teaching community casts a shadow over the respected, usually thankless profession. A strong, well informed PTA would simply not tolerate this type of personality in their school system due to the huge magnifying glass on the profession due to recent incidents on the 'Cape and elsewhere in Massachusetts ranging from pedaphiles, student abduction and acting in pornographic films. Burt's posting of questionable image files continues in that tradition. Harmless maybe...maybe not. Boston/Providence media is hungry for that kind of publicity.

I propose that we "de-emphasize the CW part of Amatuer tests, making the test a total cumulative, type test,
where in the failure of any one element is not a total failure. I.E. The code part would count for only 30% of the
total score, if you can pass the "theory" witha perfect 70%, yet fail the CW part , you would still pass, and if
you got 5-20% of the CW, you would be able to lose part of the theory, and still pass the over-all total of at
least 70% score .
What do you think of this idea ?
Hey, FCC, ARRL, what about it ??
A "compromise", for the "coders & the non-coders" arguements.

> about.< snip >

Like many of the other positions that have been stated on this issue, this one pushes things to extremes. My problem with contests is simple:

1. Many contests are not a problem. The CW, RTTY, and most VHF/UHF contests, for example, do indeed leave plenty of room (and time) for others who want/need the same space.

2. HF phone contests tend to be a big problem. No other ham activities so thoroughly occupy and dominate a ham band as the big phone contests. Contesters will routinely pop up on frequencies already in use and begin calling "CQ contest". They resist moving, and sometimes will reappear within 1 kHz (or less) when they do move. QRM-sensitive modes like SSTV become impossible.

Contesting is a commendable activity. But changes should be made so that contests do not own the phone bands as much as they do.

Rich W2RG

Your opinion is your opinion and you are welcome to it but when you mix
false statements into it then you are treading on thin legal ground.
You inference that I am in any way associated with the pigs mentioned
above is libelous. I have post NO image files ANYWHERE on ANY news group
with the exception of a picture of me here several months ago (and the
same picture in ASD). At that time I was told that binaries are
unwelcome thus did not post them in the last several months.

Additionally most teacher contracts protect teachers jobs from being
attacked for what they do in their private lives unless there is a
criminal charge.
There are exceptions if there is pornography involved.

The only thing I am guilty of is calling hams pigs. I have worked with
teens for many years. I sometimes made mistakes but none were ever
related to morals.

Several weeks ago someone (maybe it was you because you are pretty smart
about such things) posted a message to every sex group that "Burt
Fisher" had a
secret password to sex sites. I received at least a thousand responses
to a message I did not post. My name also shows up on DeJa news as
having posted on all those sites, even though I did not. Several years
ago I posted a picture of me and a picture of my shack, someone made a
near naked (and faked) picture of a woman in my shack and posted it to
many local BBSes. It was funny I admit but I was not the poster. About a
year ago some one telenetted into CCSnet and somehow got my password and
posted many messages from "Burt Fisher" So when you say "The picture you
posted..." It should be the "picture you appeared to have posted." So be
careful what you say in public. You made this comment in public I
expect an apology.

Actually I do not know much about N1BTQ. I have HEARD
stories but I have no reason to believe they are true.
(the stories are both very positive and slightly negative)

I do know he does not like me and I used to make fun
of him due to his weight. We had arguments in previous years
that were so unimportant that I do not even recall what they were
about but I think he attacked KA1THM but my memory is vague.

But unlike him I will not make false charges without proof.
Of course maybe he did not even make the false charge, maybe
it was somewone else using his name?

Many people have posted under my name and some still know my password.
I tried changing it but than I forgot it.

Boy am I dumb.

Anyone agree?

From: QXBJ74A@prodigy.com
Message-ID: <53od3t$kgs@useneta1.news.prodigy.com>
Source record: 214998

Subject: Cushcraft Antenna Problem

I purchased the Cushcraft AS270-10S antenna a couple of months ago, but just found time to set it up this weekend. I am finding that I am unable to use the 70cm side of it. I mounted it on my roof pointed in the direction of a repeater in my area I can hit using my HT and rubber duck. When trying to use the beam antenna, I can key the repeater but am uncopyable

I have tried this antenna using both the "Y" adapter that Cushcraft provides, as well as a direct connection to the 70cm side of the antenna.

Any suggestions would be muchly appreciated.

Thanks

RA on Amateur/Citizen's Radio

The following is taken from the 1995
ra annual report:

The Agency re-tendered the contract for the
distribution of amateur radio and citizen's
band (CB) radio licences. This was
alongside the tendering of the similar work
in respect of ship radio licences referred to
earlier. As a result of this process,
Subscription Services Limited (SSL), a
subsidiary of the Post Office, was awarded a
further contract from 1st April 1995 - to
continue from their three-year contract
which expired on that date.

The new contract introduces a number
of significant improvements to the service
provided. Details of the changes, and the
enhancement to customer service, were sent
to all amateur radio and CB licence holders
at the beginning of 1995. The Agency will
monitor closely the new arrangements
introduced in partnership with SSL.
The Agency) also announced during
the year that it would be changing the
terms of the standard licence for amateur
radio (and CB) to make it clear that it
reserves the right to publish the names of
those whose licences are revoked.

Licences are revoked occasionally,
normally following a prosecution in
respect of a misuse of the amateur radio
(or C.B) hands. The Agency remains
concerned at the continuing abuse of these
services. Within available resources it will
do what it can to continue to police the
airwaves, in co-operation with
representatives of the amateur radio and
CB communities. It will also, in suitable
cases, give publicity to cases of abuse
which comes to its attention.

The re-tendering of the licence administration work took up a great deal of the Agency's efforts during the year, but progress was made on a wide range of issues in relation to amateur radio in our regular discussions with the Radio Society of Great Britain (RSGB). Good progress was made in reviewing the arrangements for packet radio which is the key initiative currently under discussion.

The Agency took a number of initiatives during the year to improve the service available to CB licence holders. A key step was the introduction of rules concerning CB antennae - which represent a marked relaxation of the previous rules.

This followed a good deal of discussion with representatives of the CB community and other interested parties and was generally warmly welcomed by CB users.

The Agency has also held monitoring work being undertaken within ETSI on a new AMSSB standard for CB radio. Whilst there are many CB users who would like to see the introduction of an AM CB service within the UK, there are others who recognise that, to do so, could give rise to significant amounts of interference to the established FM CB service. Whilst the industry-led standards work continues, the Agency has not committed itself to the introduction of an AM/SSB standard itself and this is a position shared with a number of other radio administrations in Europe.

>Will it be alive, as we know it, in 10-20 yrs.? Your opinions please.

Not if the CW requirement for HF privileges continues to turn the internet generation away from our hobby.

1) For most non-hams, the facination of amateur radio is the idea of communicating long distances via radio in real time.

2) For the most part, this means HF privileges.

3) In today's world, peoples' time is limited. They are not willing to spend a lot of time mastering a skill they perceive as being valueless.

4) CW is perceived as being valueless. It is viewed by most people nowadays as a relic of the past, not worth spending hours per week mastering.

5) CW is valuable only as recreation. It is almost never used in emergencies, has been abandoned by the Coast Guard, and actually banned from MARS.

6) Because of the above, this hobby is not attacting young people. Until the Morse requirement is killed, our hobby will continue to die.

7) The lack of young people is starkly evident on 20M SSB. This sounds like a combination geriatric ward/retirement community. It is nearly impossible to work anyone on 20M who is not retired. This is evidence of our hobby's slow death.

That will never work, Roger. Kind of like trying to restrict people to posting messages in only one newsgroup. But this thread is interesting in the fact that apparantly some hams dislike contests as much as some other hams dislike CW. Maybe nobody likes EVERYTHING about ham radio ?

Personally, I like contests. But I hate packet, especially on HF. And I hate DX nets. So I guess I should start a campaign to restrict DX nets and HF packet ? Or maybe my current plan is better - I just avoid the frequencies on which those two activities occur. I thought the digital satellites were a real waste of time too, I fixed that problem by taking down my satellite antennas. Can't hear them anymore.....

Major contests never have SSB and CW on the same weekend, so instead of figuring out ways to ruin the peoples fun who enjoy contesting, maybe we could figure out ways to aviod them - play with SSB on the CW contest weekends, and play with our favorite digital mode on the SSB contest weekends ?

The other thing I have noticed, Roger, that seems to be similar between contests and CW, is that it seems like people who dislike contests the most never tried one.....

Hi!

I drive a Chrysler Town and Country Mini-van with a factory installed sound system, brand name "Infinity". The side door and rear speakers stopped working and the dealer said they are defected and cost several hundred dollars to replace. I found out that the speakers are powered at each speaker with a sealed module. I run both vhf and uhf radios in the van and suspect that RF may have caused the problem. The power modules components are potted, therefore I have't tried to do any testing to location the damaged component.
Has anyone have this kind of problem? I have run radios in cars for 35 years with no problems. If I replace the speakers, or the powere modules, how can I prevent the same thing from happen? Anyone had an experience with this condition?

Source record: 214816

On 10/10/96 a press release from the White House, talking about the new internet initiative, refers to not enough commercial bandwidth being available fo future plans. Being a new ham can anyone tell me if this remark could have anything to do with the proposed lose of 2m and 70cm from the amateur bands. I have a complete copy of the statement if you would like to see it. However, it is very long.

Glad you found something you like ... but please don't insist on forcing it down everyone else's throats whether they like it or not.

We no-code advocates are NOT suggesting that the USE of code should be banned ... on the contrary, we've even suggested setting up a small CW ONLY segment (perhaps the lower 25kHz of each HF band) that would provide a sanctuary for you folks to practice your antique methods into the next century without having to compete with more effective techniques ...

So, what say you? Or will you at least enumerate your REAL reasons if you personally would insist on maintaining the code test.

BZZZZZZZTTTTT!!!!!!!! WRONG ANSWER! (Morse Myth #1) ... Morse is NOT
the most readable form type of communications under extreme QRM ... thi
military spent bizillions of dollars developing FHSS (Frequency-Hopping
Spread Spectrum) systems because THEY are the best performers in jamming
environments ...

(Roger writes:)
>I question whether Morse is much good at all for emergency communications:

>

Agreed ... except in #3 the useage of packet has been substantial. It's
the best way for moving high volumes of H/W traffic into/out of disaster
areas ... the emergency response agencies also like to have hard-copy
and automatic logging to disk for archival/analysis purposes.

Actually homebrewing IS VERY important ... we've FAR too many appliance
operators and not enough people making contributions to the advancement
of the radio art ... we need more "techies" and less appliance operators
to fullfill the "technical investigations" part of Part 97's purpose and
justification for our existence.

I read Gary as meaning that "It's been a well established fact for a
very long time that contact is possible." ...
^^^^^^^^^^^^^^^^^^^^^^^^

In other words, what the HELL is the BFD about getting a piece of paper
that says you and some other guy passed inflated signal reports, names,
and callsigns? It's NOT like being the first man to set food on the
moon for God's sake!!!

Contesting and DXing have BOTH had their "importance" GROSSLY
over-inflated by the "It's ONLY a hobby!" group and their self-centered
view of the world that says "They're our bands, just for us to play in,
and we don't want newcomers coming in and overcrowding them so that we
don't have room to play our games."

These gamer, "Only a hobby" attitudes will cost us our bands if they
continue to run rampant the way they have in the last 30 years or so.

The difference between the example that you cite and contests is that
contests end up consuming the entire band. I haven't heard of too many
DX nets, packet contacts, and so on, taking up the entire band.

Personally I dislike contests. I believe there is more to ham radio than
"You're 5-9. What's your call? QRZ."

I do believe that a portion of each band should be reserved for non-
contest stations. This is only common courtesy. Of course it is easy to
say "go to one of the WARC bands", but you and I both know that depending
on propagation that may or may not be feasible.

>Major contests never have SSB and CW on the same weekend, so instead of
>figuring out ways to ruin the peoples fun who enjoy contesting,

Nobody wants to "ruin people's fun" by restricting contesting, but by the
same token why should my fun be ruined >by< contesting? If a small portion
of each band were reserved for non-contest stations during contests, I
believe everyone would be a lot happier.

Boys,boys,boys.IT is about to cross the "good taste" line.is it that

much of a big deal to almost stop being gentlemen?

> Hams should have to work to get their licenses.

It is NOT the government's job to enforce YOUR idea of a "work ethic" on ANYONE ... it is clearly not relevant as a licensing requirement ... the ONLY relevant licensing requirements are/should be technical knowledge and rules/regs knowledge. Anything else is unnecessary fraternity hazing and inappropriate for the government to impose.

>I feel the current system is fine... an entry-level license with VHF =
>capabilities, and code tests for the rest.

The current system sucks ... it has created an "upper class" of licensees who are, to a signicant degree, rooted in the past rather than looking towards the future and stagnating the service with their insistance on foolish rituals or antiquity.

>Morse is readable under all conditions.
BZZZZZZZTTTTTT! WRONG ANSWER!!!!!
I wish I got a buck for every time I point out that Morse Myth #1, while widely bandied about by the technically ignorant, is patently false.

>Morse is *THE* most readable type of communication under extreme QRM.

BZZZZZZZTTTTTT! WRONG ANSWER AGAIN!!!! It IS NOT ... please stop spreading false information ... many people don't know enough to realize that it IS false (including you, apparently)

>And, most home-brewers learn by building a Morse transmitter and
>receiver.

If you statement were anti-code, I'm sure Mike D. would immediately DEMAND that you cite the sources of the statistics that prove the avbove assertion ... I suspect your statement is false ... there's a hell of a lot of accessory gear and VHF/UHF FM kits being built ...

>of the innards of this radio, and also drew a diagram as JPG
>files. will post when Netcom becomes stable again, their system
>is slow right now.

It's their Orange County CA dial-up that's messed up, that's all.
Anyway, I just posted in alt.binaries.pictures.misc & 12hr & clocks
two image files, one a picture of the modified AA5 radio using the
sub-mini tubes, and the other image file a schematic diagram.
This radio was missing its back, and its antenna, so I had to
make a new loop antenna from ribbon cable.

This would file under: "What If", what if sub-mini tubes were to be
the next generation of consumer tubes (and what if transistors not
been developed). Also assumes that the manufacturing costs of
sub-mini's became reasonable (would happen when you make billions
of anything, you find ways of making it low cost). As it was, only
the military could afford sub-mini's.

5003. GMR100 Speaker/Microphone

>

Better yet ... restrict the contest(ers) to a small portion of each (or a single) band and let 'em duke it out there ... why should contests be allowed to expand to fill all available space to the detriment of all else???

So the Anti-code Being is on the soapbox again. It doesn't matter what activities you get involved in on the air as long as you do. What we need is numbers to show we have a viable claim to our bits of spectrum. Contesting is fun and part of the hobby that helps get people on the air and active, even buying equipment. If you dont think its popular, look at the scores for them in QST and CQ. Although the sunspot cycle is low so participation is down, look at the activity in better years Even with my not so competitive station, in contests past have made as many as 700-800 contacts in a weekend and had a good time participating. CW contests are the most fun for me, much less QRM. DXCC is the same, it gets people on the air and active. If morse, contests, and dxcc are so worthlessly lame why do the seminars at the various hamfests have the rooms so packed if the seminars are on these subjects? Hardly anyone goes to the packet seminars.

- --- BEGIN Linux AX25 HOWTO part 2/2 ---

shell
this is the login shell of any new users.

associate
this flag indicates whether outgoing AX.25 connections made by
this user after they login will use their own callsign, or your
stations callsign.

14.5. Configuring the pms

The pms program is an implementation of a simple personal message system. It was originally written by Alan Cox. Dave Brown, N2RJT, <dcb@vectorbd.com> has taken on further development of it. At present it is still very simple, supporting only the ability to send mail to the owner of the system and to obtain some limited system information but Dave is working to expand its capability to make it more useful.

Configuring the pms program is still a little clumsy at the moment because it is new but bare with it while Dave works on it. The only difficult part is modifying the source code to support your local mail delivery agent and whether you use the ttylinkd program or the talk-ax25 program.

After that is done there are a couple of simple files that you should create that give users some information about the system and then you need to add appropriate entries into the ax25d.conf file so that connected users are presented with the PMS.

14.5.1. Customising pms.c

If you take a look at the pms.c file in the ax25-utils package you will see that there a few items that you can configure. Perhaps the most important to configure is the one that allows you to specify what local mail delivery agent you use. In most installations the deliver program may well work, but in the minimal installation on my gateway

machine I needed to modify the line that previously said:

#define MAIL_DELIVERY_AGENT "deliver %s"

to:

#define MAIL_DELIVERY_AGENT "/bin/mail.local %s"

There is no easy way of knowing what local delivery agent your machine is configured to use, so perhaps you could simply look for either of these files in the obvious places and choose whichever seems to be there.

I also have the ttylinkd program installed, so I needed to modify the section relating to it. I keep my copy of the ttylinkd program in my /usr/sbin directory, so I modified the line that previously said:

/* #define MY_TALK "/usr/local/sbin/ttylinkd" */

to:

#define MY_TALK "/usr/sbin/ttylinkd"

If you use the talk-ax25 program then you would remove the /* and */ from around that line instead.

There is one last definition that might be useful to you, and that is if you have a default email gateway. This line is the line containing the string MY_GATEWAY. If you have an email gateway that you use, then you should remove the comments from this line and change the address to that of your gateway.

14.5.2. Create the /usr/local/pms/motd file.

The /usr/local/pms/motd file contains the `message of the day' that users will be presented with after they connect and receive the usual BBS id header. The file is a simple text file, any text you include in this file will be sent to users.

14.5.3. Create the /usr/local/pms/info file.

The /usr/local/pms/info file is also a simple text file in which you would put more detailed information about your station or configuration. This file is presented to users in response to their issuing of the Info command from the PMS> prompt.

14.5.4. Associate AX.25 callsigns with system users.

When a connected user sends mail to an AX.25 callsign, the pms expects that callsign to be mapped, or associated with a real system user on your machine.

You make this association with the axparms command. An example looks like:

axparms -assoc vk2ktj terry

This command associates that AX.25 callsign vk2ktj with the user terry on the machine, so any mail for vk2ktj on the pms will be sent to terry.

Remember to put these associations into your rc file so that they are available each time your reboot.

14.5.5. Add the PMS to the /usr/local/etc/ax25d.conf file.

Adding the pms to your ax25d.conf file is very simple. There is one small thing you need to think about though. Dave has added command line arguments to the PMS to allow it to handle a number of different text end-of-line conventions. AX.25 and NetRom by convention expect the end-of-line to be carriage return, linefeed while the standard unix end-of-line is just newline. So, for example, if you wanted to add an entry that meant that the default action for a connection received on an AX.25 port is to start the PMS then you would add a line that looked something like:

default 1 10 5 100 5 0 root /usr/local/bin/pms pms -a -o vk2ktj

This simply runs the pms program, telling it that it is an AX.25 connection it is connected to and that the PMS owner is vk2ktj. Check the man page for what you should specify for other connection methods.
14.5.6. Test the PMS.

To test the PMS, you can try the following command from the command line:

/usr/local/bin/pms -u vk2ktj -o vk2ktj

Substitute your own callsign for mine and this will run the pms, telling it that it is to use the unix end-of-line convention, and that user logging in is vk2ktj. You can do all the things connected users can.

Additionally you might try getting some other node to connect to you to confirm that your ax25d.conf configuration works.

15. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users.

15.1. Linking NOS and Linux using a pipe device

Brandon S. Allbery, KF8NH, contributed the following information to explain how to interconnect the NOS running on a Linux machine with the kernel code using the Linux pipe device.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this

would be slow and costly. Linux provides a feature that many other Unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must choose a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program, as the Linux kernel starts first and the master end of the pipe must be opened first. You must also remember that your Linux kernel must have a different IP address to your NOS, so you will need to allocate a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to create the slip link from your linux kernel you can use commands similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88 and the NOS program is using IP address 44.70.248.67. The route command in the last line simply tells your linux kernel to route all datagrams for the amprnet via the slip link created by the slattach command. Normally you would put these commands into your /etc/rc.d/rc.inet2 file after all your other network configuration is complete so that the slip link is created automatically when you reboot. Note: there is no advantage in using cslip instead of slip as it actually reduces performance because the link is only a virtual one and occurs fast enough that having to compress the headers first takes longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

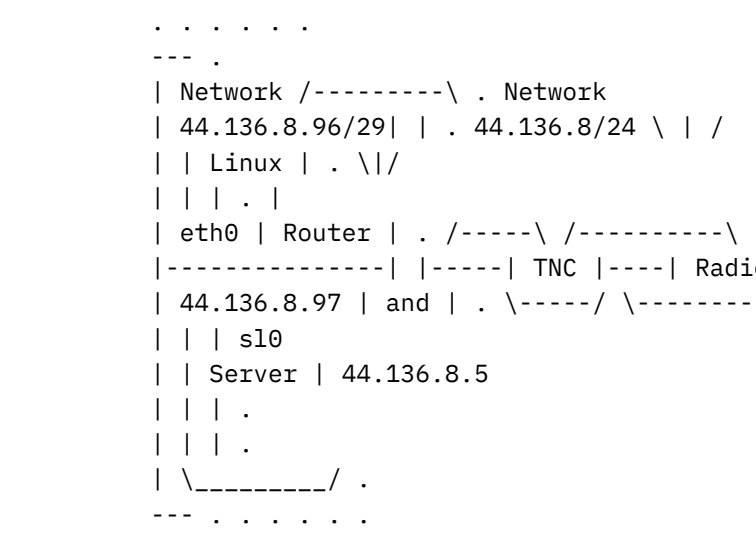
These commands will create a slip port named `linux' via the slave end of the pipe device pair to your linux kernel, and a route to it to make it work. When you have started NOS you should be able to ping and telnet to your NOS from your Linux machine and vice versa. If not, double check that you have made no mistakes especially that you have the addresses configured properly and have the pipe devices around the right way.

16. Some sample configurations.

Following are examples of the most common types of configurations. These are guides only as there are as many ways of configuring your network as there are networks to configure, but they may give you a start.

16.1. Small Ethernet LAN with Linux as a router to Radio LAN

Many of you may have small local area networks at home and want to connect the machines on that network to your local radio LAN. This is the type of configuration I use at home. I arranged to have a suitable block of addresses allocated to me that I could capture in a single route for convenience and I use these on my Ethernet LAN. Your local IP coordinator will assist you in doing this if you want to try it as well. The addresses for the Ethernet LAN form a subset of the radio LAN addresses. The following configuration is the actual one for my linux router on my network at home:



```
#!/bin/sh
# /etc/rc.net
# This configuration provides one KISS based AX.25 port and one
# Ethernet device.

echo "/etc/rc.net"
echo " Configuring:"

echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
```

```
echo " done."

echo -n " ethernet:"
/sbin/ifconfig eth0 44.136.8.97 netmask 255.255.255.248 \
broadcast 44.136.8.103 up
/sbin/route add 44.136.8.97 eth0
/sbin/route add -net 44.136.8.96 netmask 255.255.255.248 eth0
echo " done."

echo -n " AX.25: "
axattach -i 44.136.8.5 -m 512 /dev/ttyS1 4800
ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.8.255
route add -host 44.136.8.5 sl0
route add -net 44.136.8.0 window 1024 sl0

echo -n " Netrom: "
nrattach -i 44.136.8.5 netrom

echo " Routing:"
/sbin/route add default gw 44.136.8.68 window 1024 sl0
echo " default route."
echo done.

# end

/usr/local/etc/axports

# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz

/usr/local/etc/nrports

# name callsign alias paclen description
netrom VK2KTJ-1 LINUX 235 Linux Switch Port

/usr/local/etc/nrbroadcast

# ax25_name min_obs def_qual worst_qual verbose
4800 1 120 10 1
```

• You must have IP_FORWARDING enabled in your kernel.

• The AX.25 configuration files are pretty much those used as examples in the earlier sections, refer to those where necessary.

• I've chosen to use an IP address for my radio port that is not within my home network block. I needn't have done so, I could have easily used 44.136.8.97 for that port too.

• 44.136.8.68 is my local IPIP encapsulated gateway and hence is where I point my default route.

• Each of the machines on my Ethernet network have a route:

```
route add -net 44.0.0.0 gw 44.136.8.97 window 512 mss 512 eth0
```

The use of the mss and window parameters means that I can get optimum performance from both local Ethernet and radio based connections.

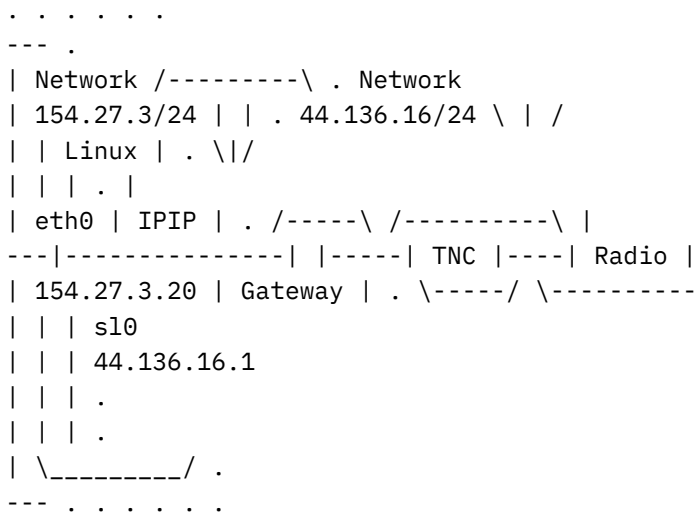
• I also run my sendmail, http, ftp and other daemons on the router machine so that it needs to be the only machine to provide others with facilities.

• The router machine is a lowly 386DX20 with a 20Mb harddrive and a very minimal linux configuration.

16.2. IPIP encapsulated gateway configuration.

Linux is now very commonly used for tcp/ip encapsulated gateways around the world. The new tunnel driver supports multiple encapsulated routes and makes the older ipip daemon obsolete.

A typical configuration would look similar to the following.



The configuration files of interest are:

```
# /etc/rc.net
# This file is a simple configuration that provides one KISS AX.25
# radio port, one Ethernet device, and utilises the kernel tunnel driver
# to perform the IPIP encapsulation/decapsulation
#
echo "/etc/rc.net"
echo " Configuring:"
#
echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."
#
echo -n " ethernet:"
/sbin/ifconfig eth0 154.27.3.20 netmask 255.255.255.0 \
broadcast 154.27.3.255 up
/sbin/route add 154.27.3.20 eth0
/sbin/route add -net 154.27.3.0 netmask 255.255.255.0 eth0
```

```
echo " done."
#
echo -n " AX.25: "
axattach -i 44.136.16.1 -m 512 /dev/ttyS1 4800
/sbin/ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.16.255
/sbin/route add -host 44.136.16.1 sl0
/sbin/route add -net 44.136.16.0 netmask 255.255.255.0 window 1024 sl0
#
echo -n " tunnel:"
/sbin/ifconfig tunl0 44.136.16.1 mtu 512 up
#
echo done.
#
echo -n "Routing ... "
source /etc/ipip.routes
echo done.
#
# end.
```

and:

```
# /etc/ipip.routes
# This file is generated using the munge script
#
/sbin/route add 44.134.8.0 netmask 255.255.255.0 tunl0 gw 134.43.26.1
/sbin/route add 44.34.9.0 netmask 255.255.255.0 tunl0 gw 174.84.6.17
/sbin/route add 44.13.28.0 netmask 255.255.255.0 tunl0 gw 212.37.126.3
...
...
...
```

```
/usr/local/etc/axports

# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz
```

Some points to note here are:

- The new tunnel driver uses the gw field in the routing table in place of the pointopoint parameter to specify the address of the remote IPIP gateway. This is why it now supports multiple routes per interface.

- You can configure two network devices with the same address. In this example both the sl0 and the tunl0 devices have been configured with the IP address of the radio port. This is done so that the remote gateway sees the correct address from your gateway in encapsulated datagrams sent to it.

- The route commands used to specify the encapsulated routes can be automatically generated by a modified version of the munge script. This is included below. The route commands would then be written to

a separate file and read in using the bash source /etc/ipip.routes
command (assuming you called the file with the routing commands
/etc/ipip.routes) as illustrated. The source file must be in the
NOS route command format.

• Note the use of the window argument on the route command. Setting
this parameter to an appropriate value improves the performance of
your radio link.

The new tunnel-munge script:

```
#!/bin/sh
#
# From: Ron Atkinson <n8fow@hamgate.cc.wayne.edu>
#
# This script is basically the 'munge' script written by Bdale N3EUA
# for the IPIP daemon and is modified by Ron Atkinson N8FOW. It's
# purpose is to convert a KA9Q NOS format gateways route file
# (usually called 'encap.txt') into a Linux routing table format
# for the IP tunnel driver.
#
# Usage: Gateway file on stdin, Linux route format file on stdout.
# eg. tunnel-munge < encap.txt > ampr-routes
#
# NOTE: Before you use this script be sure to check or change the
# following items:
#
# 1) Change the 'Local routes' and 'Misc user routes' sections
# to routes that apply to your own area (remove mine please!)
# 2) On the fgrep line be sure to change the IP address to YOUR
# gateway Internet address. Failure to do so will cause serious
# routing loops.
# 3) The default interface name is 'tunl0'. Make sure this is
# correct for your system.

echo "#"
echo "# IP tunnel route table built by $LOGNAME on `date`"
echo "# by tunnel-munge script v960307."
echo "#"
echo "# Local routes"
echo "route add -net 44.xxx.xxx.xxx netmask 255.mmm.mmm.mmm dev sl0"
echo "#"
echo "# Misc user routes"

17. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the linuxnet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:
subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

SB DX @ WW $OPDX.274
Ohio/Penn DX Bulletin No. 274

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 274
BID: $OPDX.274
October 14, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WA1S, WJ2O, K4CEF, N4VZ, W4FOA, K4PI, W5IJU & Island News, W7KJJ/6, KF7AY, K8VJG, WN9JAT, EA3BT, EY8MM, F6AJA, G4BUE & DX News Sheet, IK0AZG, ON6TT and V73C following DX information.

3DA, SWAZILAND. It has been reported that two different operations will be active in 3DA for the CQWW SSB Contest (October 26-27th). Both groups will be active on all bands. The first group will be active as 3DA0DX which includes WJ2O and a couple of ZS hams as a Multi/Single entry in the contest. Outside the contest, several of the operators will be using various 3DA0 callsign. QSL via WJ2O.
The second operation will sign 3DA0NX during the contest which will be Single Op entry by Koji, ZS6CAX (ex JM1CAX/KG7WW). He states this operation will be the part of contesting team registered as the "Team Nippon". 6Y5XX, FG5BG, V85HG and JH7PKU will be the partners (all JA ops). For QSLs if it's via bureau send it to JM1CAX but no direct mail to Koji JA address. QSL direct to: Koji Tahara, JM1CAX, ZS6CAX, Japan Embassy, P.O. Box 11434, Brooklyn 0011, South Africa.
Meanwhile, the "DX News Sheet" reports Jon, 3DA0CA, is active again after his holiday in the USA, with a new FT990 and FL7000 giving him more power. He has put up a B/W 160-10m folded dipole and has worked a W8 on 160 meter with it. He is regularly active at his sunrise (0326z) below 3510kHz. QSL via W4DR.

5X, UGANDA (News by Peter, 5X1T/ON6TT)......
Gus, 5X1D, has left the country as of October 11th. QSL via SM0BFS. Another Swedish ham will replace him, but the latter has not received a call yet.

5X1R is still active from the same QTH. (ed. Peter did not supply the QTH and I could not find it in my records). QSL via SM4ARJ.

5X4F is back. He arrived in his QTH in Arua, North Uganda, last week, and is back on the air. Paul has brought with him an 80 ft tower, but it will take some time before he will move his yagi and lowband antennas to that tower (approx. end November). Paul states that his new QSL manager is K3SW.

5X1T, Peter, reports that his QSL cards are now in printing. His QSL Manager, ON5NT, has all the logs. So far he has made about 8,000 QSOs from 5X (with about 1500 on RTTY). Peter will be active in the CQWW SSB Contest on 15 meters single band or low power all band depending if his low band antenna arrives on time out of Burundi.

9M2, WEST MALAYSIA. Tex, 9M2TO, reports to OPDX that as of October 7th, he built and installed a 80/160 dipole, so begin looking for him on those bands. QSL via JA0DMV thru the bureau or direct to: Terutsugu Izumo, Bukit Dumbar Apt. 9-4, 97 Jalan Thomas 11700 Gelugor, Penang Island, Malaysia

8Q7, MALDIVES (UPDATE, ref OPDX.261). Josep, EA3BT, and his wife Nuria, EA3AOK, will be active as 8Q7BT and 8Q7OK October 23-31st and have announced the following operating times on RTTY: U.S. on 14085 kHz between 1600-2000z, Japan (meaning also Asia) on 15 meters between 0300-0800z and Europe on 15 meters between 1100-1600z.

C9, MOZAMBIQUE. The DXNS reports Jon, 3DA0CA, will be active 1500z October 23rd to 0500z October 28th (including CQww SSB Contest) as C91CO from Maputo. Activity will be on 160, 40 and 20 meters. QSL W4DR.

CY0, SABLE ISLAND. Operators WA4DAN, AH9B, VK2BEX, and V73C are planning to be active from here October 21-29th. In addition to the DXpedition, they plan to operate in the CQWW Contest as well. This was not orginally planned as a contest operation. However, the best dates available from Environmental Canada included the contest weekend. So why not? The operators will be signing homecall/CY0, but have requested CY0XX for the contest. At this time they do not know if the call will be issued in time. The QSL Manager is Murray, WA4DAN, QSL via his Callbook address. They will operate on all bands and plan to have active two PHONE, two CW stations and one station dedicated to RTTY.

D2, ANGOLA (UPDATE). Alex, PA3DZN (aka 9X5EE, 9Q2L, etc), has arrived in Luanda. He arranged a meeting with the PTT Director, and has received the callsign D25L (Delta-two-five-Lima). However, he does not expect to be active soon, as his antennas and amplifier is still under way and are not expected to arrive for the next 2-3 weeks. He does have his radio and keyer here, so he may string up a 40 meter dipole. However, he states it may not be worth going through the trouble because he will be leaving Luanda in about 3 weeks for a place called Menongue which is in the southern part of the country. Meanwhile, he is hopeful the shipment will arrive in time so he can take all of his equipment at once to Menongue and not miss out on the CQWW SSB Contest. QSL via PA3DMH.

EY, TAJIKISTAN. Nodir, EY8MM, reports that he and Alex/EY8CQ, Irage/EY8WW, Vlad/EY8XX, Vlad/EY8VV, and Bruce EY8RR (AA3DK) will be active this year as Multi/Single entry in CQ WW SSB contest as EY2Q. The station will include a 3 element monobanders for 40, 20, 15 and 10 meters. For 80 meters they will use a Rombic antenna and an inverted Vee for 160 meters.

FO, FRENCH POLYNESIA. Eric, F5CCO, will be on Tahiti during the months of November and December. He is there mainly on business, but he will be active on the weekends and if possible after work. He should be on the island November 15th and will stay for about 4 or 5 weeks there. Particular attention will be given for 80 and 40 meters. He currently does not know what his callsign will be but will receive it upon his arrival.

IR, ITALY. GianFederico, IK0AZG, states he will air the special callsign IR0C during the next CQWW SSB Contest. QSL via home call.

J3, GRENADA. From November 16-26th, a group from the Yankee Clipper Contest Club (YCCC) will be operating from here. Operators are as follows: J38AA - Ann/WA1S, J38AB - Paul/K1XM, J38AC - Al/W1FJ, J38AD - Joe/KM1P, J38AE - Charlotte/KQ1F and J38AF Rich/K2WR. They will be operating in the CQWW CW Contest as a Multi/Multi entry with 3 stations (possibly 4) with amplifiers at each station and monobanders on 10, 15, 20 and 40 meters. They will have wire antennas for 80 and 160 meters. Paul, KX1M, is trying to get a short call for the contest operation. Their backup callsign will be J38AA. All contest QSLs will be via Charlotte, KQ1F.

KC6, REP. BELAU. Just a reminder! Start looking for the Oklahoma DX Association members, Coy, N5OK (KC6OK), and Dave, N5CG (KC6GG), to be active for the next 4 to 8 weeks. Coy plans to try 160 meters everyday. (Refer to OPDX.272).

P4, ARUBA. Mike, K4PI, will be active as P49I during the CQWW SSB Contest, October 26-27th. He plans to be in the contest as a 80 meter single band entry.

QSL NEWS AND INFORMATIONS.....
Dave, W7KJJ/6, has reported that over the past few years he has been mistaken for and has received cards for CE0-San Felix operation. He states that he has been rather inactive over the past couple of years, but recently received a batch of cards from the W7 bureau which had a couple more cards from Europeans asking for CE0 cards.

Dragan, ET3YU, reports his mission in Ethiopia is about done and that a new QSL route will be used instead on the one in Addis Ababa. Cards for ET3YU should now be sent to Dragan's new address: Dragan Stojanovic, Dusana Vukasovica 82/20, 11070 Novi Beograd, Yugoslavia. Dragan reports he has only exchanged about 4,000 QSLs out of 14,000 QSOs.

F5NZO reports he has received the log from FT5XL for between February 13th and September 1st. He will reply for all direct request as soon as possible.

SOUTH CHINA SEA ACTIVITY. It has been reported to OPDX, that Bolon, BV5AF, President of CTARL & TAMSAT, states they have plans for BV9P, to be active late March, 1997, if the propagation is better. Also, they have plans to activate BV9S, on one of the big island of Spratly, named Equal Island, which is handled by ROC, Taiwan. This operation is scheduled to be on aired 2 years later.

T2, TUVALU. Ron, ZL1AMO, is now on Tuvalu signing T28RW as expected. W4FOA had a QSO with him on 40 meters CW and asked if he planned to work any 80 or 160 meters. Ron said that he hopes he will be able to. He says that the airlines lost his antennas and his linear.

XZ, MYANMAR DXPEDITION UPDATE. (Excerpts from a press release by Warren, KF7AY. The complete press release will be sent to all InterNet OPDX Subscribers as an additional bulletin.) The XZ1N DXpedition to Myanmar remains on course. Final approvals have been received and all but last minute details remain to be worked out. This will be a large scale operation, with a chance for everyone to have this location in some new and exciting ways. The group will arrive in Yangon on November 16th and may even be active that evening. There will be a special event station running on November 18th. From November 19th through November 22nd, three stations will be on all bands and most modes (CW, SSB and RTTY). On November 23rd and 24th, XZ1N will be active in the 1996 CQ World-Wide CW DX Contest as a multi-multi entry from zone 26. There will be some activity on November 25, just before everything is taken down. The team departs for Bangkok on November 26th. Participants: OH1NYP, OH2BH, K5VT, KA5AYR, AB6ZV, N6BT, WA6CDR, AA7WP, KF7AY, N7WTU, WA7LNW and WY7K. QSL via W1XT (direct or bureau): Bob Myers, PO Box 17108, Fountain Hills, AZ 85269-7108. The XZ1N web site has been updated with current information and can be found at: http://www.getnet.com/~kf7ay/myanmar.html

YB, INDONESIA. Dennis, AA7VB, will be active from here this week as YB9BV and for the upcoming contest. He hopes to make some serious noise from Zone 28.

ZS1, SEAL ISLAND (SOUTH AFRICA). By the time you read this, ZS1IFJ, ZS1B, ZS1JM, ZS1X, ZS1LVH and others should be active from here until October 23rd. This will be a new IOTA located in the Cape Province South Coast Group. Activity will be on CW/SSB 24 hours a day. Callsign and QSL information has not be released yet.

- --- BEGIN Linux HAM HOWTO part 2/2 ---

Author
Thomas Nau, Thomas.Nau@rz.uni-ulm.de

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.4.1, stable.

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile
and install the software. I compiled it without error under
X11R6. It comes with package layouts for a range of popular
components and the example layout nicely demonstrates the
capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/pcb-1.4.1.tar.gz>
or from: ftp.uni-ulm.de <ftp://ftp.uni-ulm.de/pub/pcb/current>

Licensing/Copyright
GNU Public License

11.4. Chipmunk circuit design and simulation tool

Author
Dave Gillespie daveg@synaptics.com and John Lazzaro
lazzaro@cs.berkeley.edu

Description
Schematic Entry and Digital or Analog Simulation.

Status
vers 5.10, stable.

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256 color) only

Detail
I haven't tried this one out yet.

Where and How to obtain it.
You can obtain the Chipmunk package from its home site at www.pcmp.caltech.edu <http://www.pcmp.caltech.edu/chipmunk/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed from liability.

11.5. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two simulation modes, either switch where each transistor is modelled as a voltage controlled switch, or linear where each transistor is modelled as a resistor in series with a voltage controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain irsim from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/irsim-9.2.linux.1.tar.gz>.

Licensing/Copyright
Freely Redistributable

11.6. Spice vers. 3f4

Author
University of California, Berkeley, port by Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer modelled environment to see how they will behave without having to touch a soldering iron, or solder. A readme file comes with the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of Spice from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>

Licensing/Copyright
Copyright held by University California, Berkeley. Freely redistributable provided you are not unfriendly to the U.S.

11.7. svgafft - Spectrum analyser

Author
Andrew Veliath, veliaa@rpi.edu

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha, but usable.

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit and 8-bit sample resolution on supported Linux soundcards. It's display is something akin to a high-end spectrum analyzer with falling peaks. Andrew is working on an X-Motif version to be released soon.

Where and How to obtain it:
You can find the software at tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/ALPHA/svgafft/svgafft-0.2h.tar.gz> and sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/svgafft-0.2h.tar.gz>.

Licensing/Copyright
GNU Public License.

Contributed by:
Andrew Veliath

11.8. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio,
performs a fast fourier transform on the data and displays the
output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freq5a1.tar.gz> or
by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

11.9. ObjectProDSP

Author
Paul Budnik, Mountain Math Software, support@mtnmath.com

Description
ObjectProDSP is an object oriented tool for design, development
and implementation of Digital Signal Processing. It allows you
to design your DSP network, runs simulations with oscilloscope
style plots and listings at any point in the network.

Status
alpha.

System requirements
XFree86 3.1.1 or better, g++ from gcc 2.6.3 or better, 32Mb of
total memory (real+swap) recommended, 6Mb of disk space for
minimum configuration, 40Mb disk for full installation.

Detail
There are a number of files that comprise the package. There is
a binary only package for Linux which I recommend you start
with. There is comprehensive documentation included from which
you can obtain installation and operation instructions.

Where and How to obtain it.
You can obtain ObjectProDSP from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/devel/opd>, tsx-11.mit.edu
<ftp://tsx-11.mit.edu/pub/linux/packages/dsp>, or ftp.funet.fi
<ftp://ftp.funet.fi/pub/OS/Linux/util/electronics/opd>. There
are a number of files that comprise the package, some of the
quite large so be prepared.
Licensing/Copyright
GNU Public License vers 2.0., Commercial licensing available.

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse
Code tutorials, technical examination database, Computer Based
Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for
Amateur Radio operators.

Status
Not yet available.

System requirements.
Linux compatible hardware, some software will obviously require
specialised hardware to operate. No additional software should
be required.

Detail
A complete Linux distribution specifically catering for Amateur
Radio operators. It will include a fully featured Linux
installationplus a range of amateur radio specific software such
as those listed in this document. Bruce has detail and updated
status report available at the LinuxForHams WWW page
<http://www.rahul.net/perens/LinuxForHams>.

Where and how to obtain it:
It isn't yet available, details will be made available when it
is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens

13.2. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are exposed by sunlight and what parts aren't.

Status
Released.

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at the top of sunclock.c remain intact.

13.3. Xearth

Author
Kirk Johnson, tuna@cag.lcs.mit.edu

Description
A rotating earth for X-windows root window. It has real life shading, and options for geostatic view, and non geostatic view. A prettier and more modern version of sunclock but requires a bit more processing power.

Status
Version 1.0.

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture of the earth onto your X Windows display. It offers either an orthographic view as you would see from space or the map like

mercator projection. You have a number of options in determining the behaviour of the view. The details are available from the xearth Home Page <http://cag-www.lcs.mit.edu/~tuna/xearth/> and in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu <ftp://cag.lcs.mit.edu/pub/tuna/> or just about any X11/contrib directory.

Licensing/Copyright

Kirk Johnson

14. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible. So I'm keen to hear about any developments or products that I don't already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing? Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is what makes this software unique, anything special about it. Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would be great. If it is commercial software then the name of the company distributing the software, and an address or telephone number. If it is available only by some other means, say mail order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain? Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what you do know and I'll list what I can. I'd rather have an incomplete listing than no listing at all.

Please mail any contributions to:

terry@perf.no.itg.telecom.com.au

I'd list a packet radio address too but I'm still not properly operational again yet after moving house.

15. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the undernet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

16. Copyright.

- --- BEGIN Linux AX25 HOWTO part 1/2 ---

Linux AX25-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v1.1, 14 June 1996

The Linux Operating System is perhaps the only operating system in the
world that can boast native and standard support for the AX.25 packet
radio protocol utilised by Amateur Radio Operators worldwide. This
document aims to describe how to install and configure this support.

1. Introduction.

This document was originally an appendix to the HAM-HOWTO, but grew
too large to be reasonably managed in that fashion. This document
describes how to install and configure the native AX.25 and NetRom
support for Linux. A few typical configurations are described that
could be used as models to work from.

1.1. Changes from the previous version

Additions:
Baycom support - ye gads!

Corrections/Updates:
Included SLIP support in kernel config - oops.
2.0.0 kernel and ax25-tools update.
Updated net-tools to 1.32-alpha version.
Removed Jonathons `special' net-tools.
A bit of shuffling about to make more sense.
Updated the example configurations.
A minor copyright ooops.

1.2. Other related documentation.

There is a lot of related documentation. There are many documents that
relate to Linux networking in more general ways and I strongly
```

recommend you also read these as they will assist you in your efforts and provide you with stronger insight into other possible configurations.

They are:

The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>

the Net-2-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/NET-2-HOWTO.html>

the Ethernet-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Ethernet-HOWTO.html>

the IPX-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/IPX-HOWTO.html>

and

the Firewall-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Firewall-HOWTO.html>

2. Where to obtain new versions of this document.

The best place to obtain the latest version of this document is from a Linux Documentation Project archive. The Linux Documentation Project runs a Web Server and this document appears there as The AX25-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/AX25-HOWTO.html>. You can always contact me, but I pass new versions of the document directly to the LDP HOWTO coordinator, so if it isn't there then chances are I haven't finished it.

3. Linux and the AX.25 and NetRom Packet Radio Protocols.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as TCP/IP and NetRom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom support and is now the developer of the AX.25 related kernel code and utilities. DAMA support was developed by Joerg, DL1BKE. Finally Baycom support was added by Thomas Sailer, <sailer@ife.ee.ethz.ch>.

The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card, the Gracilis PacketTwin card and other Z8530 SCC based cards with the generic SCC driver and both the Parallel and Serial port Baycom modems.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

4. The AX.25/NetRom software components.

The AX.25 software is comprised of three components, the kernel source, the network configuration tools and the utility programs.

The version 1.3.xx Linux kernels include the AX.25, NetRom, Z8530 SCC, PI card and PacketTwin drivers by default. I recommend you obtain and use the version 1.3.xx kernel source.

These are three reasons I'm recommending you use the alpha version software even though most everyone else will recommend you don't use it:

- it makes the process of building and configuring the software a whole lot simpler. There are no patches to apply it is a simple matter of configuring and compiling a kernel with the appropriate options enabled.

- it is the most recent software and is most likely to provide the most satisfactory results.

- like all new software, it needs testing and bug reports. The more people that take the software and attempt to use it in their own configurations the more likely it will be that bugs are uncovered and the easier it will be to get the software debugged. Join the team, contribute bug reports and help everybody.

Be warned though, this software is alpha and may have problem that you wouldn't otherwise encounter. Please take all the usual precautions and be sure to keep a working kernel as backup when testing new kernels. It is wise to test a new kernel by booting from it from floppy before actually installing it with lilo, though I haven't bothered for about 90 kernels revisions so I'm fairly confident you can pretty safely run with alpha kernels.

4.1. Finding the kernel, tools and utility packages.

4.1.1. The kernel source:

The kernel source can be found in its usual place at:

ftp.funet.fi

/pub/Linux/PEOPLE/Linus/v2.0/

4.1.2. The network tools:

The latest alpha release of the standard Linux network tools support AX.25 and NetRom and can be found at:

ftp.inka.de

/pub/comp/Linux/networking/net-tools/net-tools-1.32-alpha.tar.gz

or:

ftp.linux.org.uk

/pub/linux/Networking/PROGRAMS/NetTools/net-tools-1.32-alpha.tar.gz

The latest ipfwadm package can be found at:

ftp.xos.nl

/pub/linux/ipfwadm/

4.1.3. The AX25 utilities:

The AX.25 utility programs can be found at:

sunsite.unc.edu

/pub/Linux/apps/ham/ax25-utils-2.0.0.tar.gz

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/ax25-utils-2.0.0.tar.gz

5. Installing the AX.25/NetRom software.

To successfully install AX.25 support on your linux system you must configure and install an appropriate kernel and then install the AX.25 utilities.

5.1. Compiling the kernel.

If you are already familiar with the process of compiling the Linux Kernel then you can skip this section, just be sure to select the appropriate options when compiling the kernel. If you are not, then read on.

The normal place for the kernel source to be unpacked to is the /usr/src directory into a subdirectory called linux. To do this you should be logged in as root and execute a series of commands similar to the following:

```
# mv linux linux.old
# cd /usr/src
# gzip -dc linux-2.0.0.tar.gz | tar xvofp -
# cd linux
```

After you have unpacked the kernel source into place you need to run the configuration script and choose the options that suit your hardware configuration and the options that you wish built into your kernel. You do this by using the command:

```
# make config
```

You might also try:

```
# make menuconfig
```

if you prefer a full screen menu based method. I'm going to describe the original method, but you use whichever you are most comfortable with.

In either case you will be offered a range of options at which you must answer `Y' or `N'. (Note you may also answer `M' if you are using modules. For the sake of simplicity I will assume you are not, please make appropriate modifications if you are).

The options most relevant to an AX.25 configuration are:

```
Networking support (CONFIG_NET) [Y/n/?] Y
Loopback device support (CONFIG_BLK_DEV_LOOP) [N/y/m/?] Y
Network firewalls (CONFIG_FIREWALL) [N/y/?]
TCP/IP networking (CONFIG_INET) [Y/n/?] Y
IP: forwarding/gatewaying (CONFIG_IP_FORWARD) [N/y/?]
IP: firewalling (CONFIG_IP_FIREWALL) [N/y/?] (NEW)
IP: tunneling (CONFIG_NET_IPIP) [N/y/m/?] (NEW)
Amateur Radio AX.25 Level 2 (CONFIG_AX25) [N/y/?] Y
AX.25 over Ethernet (CONFIG_BPQETHER) [N/y/?] (NEW)
Amateur Radio NET/ROM (CONFIG_NETROM) [N/y/?] (NEW)
Kernel/User network link driver(ALPHA) (CONFIG_NETLINK) [N/y/?]
Network device support (CONFIG_NETDEVICES) [Y/n/?] Y
SLIP (serial line) support (CONFIG_SLIP) [N/y/m/?] Y
Radio network interfaces (CONFIG_NET_RADIO) [N/y/?]
BAYCOM ser12 and par96 kiss emulation driver for AX.25 (CONFIG_BAYCOM) [N/y/m/?]
Z8530 SCC kiss emulation driver for AX.25 (CONFIG_SCC) [N/y/m/?]
Other ISA cards (CONFIG_NET_ISA) [N/y/?]
Ottawa PI and PI/2 support (CONFIG_PI) [N/y/?] (NEW)
Gracilis PackeTwin support (CONFIG_PT) [N/y/?] (NEW)
Standard/generic serial support (CONFIG_SERIAL) [Y/n/?]
```

The options I have flagged with a `Y' are those that you must must answer `Y' to. The rest are dependent on what hardware you have and what options you want to include. Some of these options are described in more detail later on, so if you don't know what you want yet, then read ahead and come back to this step later.

After you have completed the kernel configuration you should be able to cleanly compile your new kernel:

```
# make dep
# make clean
# make zImage
```

Make sure you move your arch/i386/boot/zImage file wherever you want it and then run lilo to ensure that you actually boot from it.

5.2. The network configuration tools.

After you have compiled the kernel you should compile the new network configuration tools. These tools allow you to modify the configuration of network devices and to add routes to the routing table.

The new alpha release of the standard net-tools package includes support for AX.25 and NetRom support. I've tested this and it seems to work well for me.
5.2.1. Building the standard net-tools release.

Don't forget to read the Release file and follow any instructions there. The steps I used to compile the tools were:

```
# cd /usr/src
# tar xvfz net-tools-1.32-alpha.tar.gz
# cd net-tools-1.32-alpha
# make config
```

At this stage you will be presented with a series of configuration questions, similar to the kernel configuration questions. Be sure to include support for all of the protocols and network devices types that you intend to use. If you do not know how to answer a particular question then answer `Y'.

The tools compiled cleanly against a 2.0.0 kernel without error.

When the compilation is complete, you should need only use the:

```
# make install
```

command to install the programs in their proper place.

If you wish to use the IP firewall facilities then you will need the latest firewall administration tool ipfwadm. This tool replaces the older ipfw tool which will not work with new kernels.

I compiled the ipfwadm utility with the following commands:

```
# cd /usr/src
# tar xvfz ipfwadm-2.0beta2.tar.gz
# cd ipfwadm-2.0beta2
# make install
# cp ipfwadm.8 /usr/man/man8
# cp ipfw.4 /usr/man/man4
```

5.3. The AX.25 user programs.

After you have successfully compiled and booted your new kernel, you need to compile the user programs. To compile and install the user programs you should use a series of commands similar to the following:

```
# cd /usr/local
# gzip -dc ax25-utils-2.0.0.tar.gz | tar xvvof -
# cd ax25-utils-2.0
# make install
```

The files will be installed under the /usr/local directory by default
in subdirectories: bin, sbin, etc and man.

If you get messages something like:

```
gcc -Wall -Wstrict-prototypes -O2 -I../lib -c call.c
call.c: In function `statline':
call.c:268: warning: implicit declaration of function `attron'
call.c:268: `A_REVERSE' undeclared (first use this function)
call.c:268: (Each undeclared identifier is reported only once
call.c:268: for each function it appears in.)
```

then you should read the README.ncurses file in the top level
directory. You can do as Jonathon suggests, or you can try replacing:

```
#include <curses.h>
```

with:

```
#include <ncurses/curses.h>
```

in the:

```
call/call.c
call/menu.c
```

files.

6. Configuring a RAW AX.25 connected mode interface.

The first stage to configuration of an AX.25 interface is to configure
it to work as a `vanilla' AX.25 interface with no TCP/IP. The
following configuration will get you to the point of being able to
make AX.25 calls from your Linux machine to other AX.25 nodes.

The AX.25 software has been designed to work with a TNC in kiss mode
or with other cards such as the Ottawa PI2 card, PacketTwin and other
SCC cards via special drivers that emulate a kiss tnc.

For real KISS TNC's there are two steps to complete in order to create
an AX.25 port ready to use to make outgoing calls. For other types of
hardware you need only complete the first step.

6.1. Creating the /usr/local/etc/axports file.

The AX.25 ports have a configuration file that is read by many
programs that want to find information about an AX.25 port. This file
is called the:

/usr/local/etc/axports

file. The format of the file is as follows:

```
portname callsign baudrate paclen window description
```

where:

portname
is a text name that you will refer to the port by.

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your
TNC.

paclen
is the maximum packet length you want to configure the port to
use for AX.25 connected mode connections.

window
is the AX.25 window (K) parameter. This is the same as the
MAXFRAME setting of many tnc's.

description
is a textual description of the port.

In my case, mine looks like:

radio VK2KTJ-0 4800 256 2 144.800 MHz

6.2. Creating the AX.25 device

If you are using an SCC card like the PI2 or PacketTwin then you do
not need to create the network device, as the kernel driver will
automatically do this for you. If you are using a KISS TNC then you
will need to create the AX.25 interface as it will not already exist.
Creating an AX.25 port is very similar to creating a slip device.

You will need to have the TNC preconfigured and connected to your
serial port. You can use a communications program like minicom or
seyon to configure the TNC into kiss mode if you wish.

You use the axattach program in much the same way as you would use the
slattach program (refer to the NET-2-HOWTO for more information on
slattach and the other network software for Linux). For example:

/usr/local/sbin/axattach /dev/ttyS0 radio

would configure your /dev/ttyS1 serial device to be a kiss interface
configured as per the details for the line beginning with the portname
"radio" in the /usr/local/etc/axports file.

All this step has done is to actually activate the device in the
kernel, you need to run other programs before you an actually make use
of the port.

6.2.1. Setting the callsign for SCC cards.

If you are using a PI or PacketTwin card then you should use the
axparms -setcall command to change the callsign of the appropriate
port to that which you intend to use. Refer to the PI/PacketTwin

section for the names of the network devices to use.

6.2.2. Testing the interface.

You now should be able to make outgoing AX.25 connections. To test AX.25 connected mode you could use the call program as demonstrated:

/usr/local/bin/call radio VK2DAY via VK2SUT

Note: you must tell call which AX.25 port you wish to make the call on, as the same AX.25 node might be reachable on any of the ports you have configured.

The call program is a linemode terminal program for making AX.25 calls. It recognises lines that start with `~' as command lines. The `~.' command will close the connection.

Please refer to the man pages in /usr/local/man and the README file in ax25-utils-2.0.0 distribution for more information.

7. Configuring an AX.25 interface for tcp/ip.

It is very simple to configure an AX.25 port to carry tcp/ip. Jonathon has modified the axattach command so that you can include the IP address that you want the interface to be configured with on the command line. For example, to modify the example presented earlier, I could use the command:

```
# /usr/local/sbin/axattach -i 44.136.8.5 -m 512 /dev/ttyS0 radio
# /sbin/route add -net 44.136.8.0 sl0
# /sbin/route add default sl0
```

to create the AX.25 interface with an IP address of 44.136.8.6 and an MTU of 512 bytes. You should still use the ifconfig to configure the other parameters if necessary.

You do not need to do it this way, you can of course just use the ifconfig program to configure the ip address and netmask details for the port and add a route via the port, just as you would for any other tcp/ip interface.

```
# /sbin/ifconfig sl0 44.136.8.5
# /sbin/ifconfig sl0 netmask 255.255.255.0
# /sbin/ifconfig sl0 broadcast 44.136.8.255
# /sbin/ifconfig sl0 arp mtu 256 up
# /sbin/route add -net 44.136.8.0 sl0
# /sbin/route add default sl0
```

The commands listed above are typical of the sort of configuration many of you would be familiar with if you have used NOS or any of its derivatives or any other tcp/ip software. Note that the default route might not be required in your configuration if you have some other network device configured.

To test it out, try a ping or a telnet to a local host.

```
# ping -i 5 44.136.8.58
```

Note the use of the `-i 5' arguments to ping to tell it to send pings every 5 seconds instead of its default of 1 second.

8. Configuring an AX.25 interface for NetRom.

To configure NetRom on an AX.25 interface you must configure two files.

8.1. Configuring /usr/local/etc/nrports

The first is the /usr/local/etc/nrports file. This file describes the NetRom port in much the same way as the /usr/local/etc/axports file describes the AX.25 ports.

This file is formatted as follows:

```
name callsign alias paclen description
```

Where:

name
is the text name that you wish to refer to the port by.

callsign
is the callsign that the NetRom traffic from this port will use.
alias
is the NetRom alias this port will have assigned to it.

paclen
is the maximum size of NetRom frames transmitted by this port.

description
is a free text description of the port.

An example would look something like the following:

```
netrom VK2KTJ-1 LINUX 235 Linux Switch Port
```

Note that the ports are referred to by name by programs such as call.

8.2. Configuring /usr/local/etc/nrbroadcast

The second file is the /usr/local/etc/nrbroadcast file.

This file is formatted as follows:

```
axport min_obs def_qual worst_qual verbose
```

Where:

axport
is the port name obtained from the /usr/local/etc/axports file.
If you do not have an entry in /usr/local/etc/nrbroadcasts for a port then this means that no NetRom routing will occur and any received NetRom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this
quality will be ignored.

verbose
is a flag determining whether full NetRom routing broadcasts
will occur from this port or only a routing broadcast
advertising the node itself.

An example would look something like the following:

radio 1 200 10 1

8.3. Creating the NetRom device

When you have the two configuration files completed you must create
the NetRom device in much the same way as you did for the AX.25
devices. This time you use the nrattach command:

nrattach netrom

This command would start the NetRom device (nr0) named netrom
configured with the details specified in the /usr/local/etc/nrports
file.

8.4. Starting the NetRom daemon

The NetRom daemon manages the NetRom routing tables and generates the
NetRom routing broadcasts. You start NetRom with the command:

/usr/local/sbin/netromd

You should soon see the /proc/net/nr_neigh file filling up with
information about your NetRom neighbours.

Remember to put the /usr/local/sbin/netromd command in your rc files
so that it is started automatically each time you reboot.

9. Configuring IP on a NetRom interface.

Configuring a NetRom interface for tcp/ip is almost identical to
configuring an AX.25 interface for tcp/ip.

Again you can either specify the ip address and mtu on the nrattach
command line, or use the ifconfig and route commands, but you need to
manually add arp entries for hosts you wish to route to because there
is no mechanism available for your machine to learn what NetRom
address it should use to reach a particular IP host.

So, to create an nr0 device with an IP address of 44.136.8.5 and an
mtu of 512 and configured with the details from the

/usr/local/etc/nrports file for a NetRom port named netrom you would use:

```
# /usr/local/sbin/nrattach -i 44.136.8.5 -m 512 netrom
# route add 44.136.8.5 nr0
```

or you could use something like the following commands manually:

```
# ifconfig nr0 44.136.8.5 hw netrom VK2KTJ-1
# route add 44.136.8.5 nr0
```

Then for each IP host you wish to reach via NetRom you need to set route and arp entries. To reach a destination host with an IP address of 44.136.80.4 at NetRom address BBS:VK3BBS via a NetRom neighbour with callsign VK2SUT-0 you would use commands as follows:

```
# route add 44.136.80.4 nr0
# arp -t netrom -s 44.136.80.4 vk2sut-0
# nrparms -nodes vk3bbs + BBS 120 6 sl0 vk2sut-0
```

The `120' and `6' arguments to the nrparms command are the NetRom quality and obsolescence count values for the route.

10. Configuring an Ethernet device for AX.25 ala BPQ

Linux support BPQ Ethernet compatibility. This enables you to run the AX.25 protocol over your Ethernet LAN and to interwork your linux machine with other BPQ machines on the LAN.

Configuration is quite straightforward. You firstly must have configured a standard Ethernet device. This means you will have compiled your kernel to support your Ethernet card, and executed configuration commands similar to the following:

```
# ifconfig eth0 44.136.8.5 netmask 255.255.255.248 up
# ifconfig eth0 broadcast 44.136.8.103
# route add -net 44.136.8.96 netmask 255.255.255.248 eth0
```

To configure the BPQ support you need to associate an AX.25 callsign with your Ethernet hardware address. You should use the following:

```
# axparms -dev eth0 vk2ktj-9
```

This says that AX.25 callsign vk2ktj-9 is associated with the eth0 device.

BPQ Ethernet normally uses a multicast address. The Linux implementation does not, and instead it uses the normal Ethernet broadcast address. The NET.CFG file for the BPQ ODI driver should therefore look similar to this:

```
LINK SUPPORT

MAX STACKS 1
MAX BOARDS 1
```

```
LINK DRIVER E2000 ; or other MLID to suit your card

INT 10 ;
PORT 300 ; to suit your card

FRAME ETHERNET_II

PROTOCOL BPQ 8FF ETHERNET_II ; required for BPQ - can change PID

BPQPARMS ; optional - only needed if you want
; to override the default target addr

ETH_ADDR FF:FF:FF:FF:FF:FF ; Target address
```

11. Ottawa PI/PI2 card driver and Gracilis PacketTwin driver.

The Ottawa PI and the Gracilis PacketTwin are Z8530 SCC based card for IBM PC type machines that are in common usage by Amateur Radio operators worldwide. The PI card supports a high speed half duplex (single DMA channel) port, and a low speed (<9k6bps interrupt driven) half duplex port. The PI2 is a new version of the card that supports an on board radio modem and improved hardware design. The PacketTwin card supports two high speed port and is capable of accepting on board modems.

The PI card driver was written by David Perry, <dp@hydra.carleton.edu> The PacketTwin card driver was written by Craig Small VK2XLZ, <csmall@triode.apana.org.au>. Both drivers are a standard feature of the 1.3.xx kernel.

Please refer to the AX.25 section above for details on how to configure the kernel to include the PI card or the PacketTwin card drivers.

Once you have the appropriate driver configured into your kernel then you should reboot and when you do, you should see mention of the PI or PacketTwin card driver in the messages that appear on the screen while the kernel is booting. The drivers test each of the I/O port addresses that the card might be configured for and reports any that it finds. You should then look at the /proc/net/dev file and you should see reference to devices called pi0a and pi0b or pt0a and pt0b for the PI and PacketTwin cards respectively.

If the devices don't appear then recheck that you have configured and compiled your kernel correctly and that you are in fact actually running your new kernel. If you still don't then this suggests that your PI or PacketTwin card was not detected by the kernel while it booted and may indicate that you have some sort of hardware conflicting with your PI/PT card that prevented it being detected.

If all of the above went as planned then you will need to configure your PI/PT card with an AX.25 address and for IP. The configuration of the PI/PT cards is virtually identical to that of any other IP interface. Something like the following should work ok for you:

```
# /usr/local/sbin/axparms -setcall pi0a VK2KTJ-2
# /sbin/ifconfig pi0a 44.136.8.5
# /sbin/ifconfig pi0a netmask 255.255.255.0
# /sbin/ifconfig pi0a broadcast 44.136.8.255
# /sbin/ifconfig pi0a arp mtu 256 up
# /sbin/route add -net 44.136.8.0 pi0a
# /sbin/route add default pi0a
```

Note that pi0a refers to the `a' port on the first PI card found, and that pi0b would therefore refer to the `b' port on the first PI card found. pt0a would therefore be the first port on the first PacketTwin card detected.

Note also the use of the axparms -setcall command to set the AX.25 callsign of the port.

As usual, when this has been done you can test the interface with the ping or telnet command to ensure it is working.

12. Z8530 SCC Kiss Emulation

Joerg Reuter, DL1BKE has developed generic support for Z8530 SCC based cards. His driver is configurable to support a range of different types of cards and present an interface that looks like a KISS TNC so you can treat it as though it were a KISS TNC.

12.1. Obtaining and building the configuration tool package.

The kernel driver is included in the standard kernel distribution, but there are a suite of configuration tools that you will need to obtain as well.

To compile the kernel support you must be sure to answer `Y' to: `Z8530 SCC kiss emulation driver for AX.25' when asked during a kernel `make config'.

You can obtain the configuration tools package from:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/z8530drv-2.0.dl1bke.real.tar.gz

The following command were what I used to compile and install the package for kernel version 1.3.93:

```
# cd /usr/src
# gzip -dc z8530drv-2.0.dl1bke.real.tar.gz | tar xvpofz -
# cd z8530drv
# rm gencfg sccinit sccstat
# make dep
# make utils
# make install
```

Note: I've not followed the instructions included because the version of driver in the 2.0.0 kernel is actually newer than that included in the package and the normal installation process would have overwritten

the new kernel source with the older version.

After the above is complete you should have three new programs installed in your /sbin directory: gencfg, sccinit and sccstat. It is these programs that you will use to configure the driver for your card.

You will also have a group of new special device files created in your /dev called scc0 .. scc7. These will be used later and will be the `KISS' devices you will end up using.

12.2. Configuring the driver for your card.

The z8530 SCC driver has been designed to be as flexible as possible so as to support as many different types of cards as possible. With this flexibility has come some cost in configuration.

There is more comprehensive documentation in the package and you should read this if you have any problems. You should particularly look at doc/scc_eng.doc or doc/scc_ger.doc for more detailed information. I've paraphrased the important details, but as a result there is a lot of lower level detail that I have not included.

The main configuration file is read by the sccinit program and is called /etc/z8530drv.rc. This file is broken into two main stages: Configuration of the hardware parameters and channel configuration. After you have configured this file you need only add:

sccinit

into the rc file that configures your network and the driver will be initialised according to the contents of the configuration file. You must do this before you attempt to use the driver.

12.2.1. Configuration of the hardware parameters.

The first section is broken into stanzas, each stanza representing an 8530 chip. Each stanza is a list of keywords with arguments. You may specify up to four SCC chips in this file by default. The #define MAXSCC 4 in scc.c can be increased if you require support for more.

The allowable keywords and arguments are:

chip
the chip keyword is used to separate stanzas. It will take anything as an argument. The arguments are not used.

data_a
this keyword is used to specify the address of the data port for the z8530 channel `A'. The argument is a hexadecimal number e.g. 0x300

ctrl_a
this keyword is used to specify the address of the control port for the z8530 channel `A'. The arguments is a hexadecimal number

e.g. 0x304

data_b
this keyword is used to specify the address of the data port for the z8530 channel `B'. The argument is a hexadecimal number e.g. 0x301

ctrl_b
this keyword is used to specify the address of the control port for the z8530 channel `B'. The arguments is a hexadecimal number e.g. 0x305

irq
this keyword is used to specify the IRQ used by the 8530 SCC described in this stanza. The argument is an integer e.g. 5

pclock
this keyword is used to specify the frequency of the clock at the PCLK pin of the 8530. The argument is an integer frequency in Hz which defaults to 4915200 if the keyword is not supplied.

board
the type of board supporting this 8530 SCC. The argument is a character string. The allowed values are:

PA0HZP
the PA0HZP SCC Card

EAGLE
the Eagle card

PC100
the DRSI PC100 SCC card

PRIMUS
the PRIMUS-PC (DG9BL) card

BAYCOM
BayCom (U)SCC card

escc
this keyword is optional and is used to enable support for the Extended SCC chips (ESCC) such as the 8580, 85180, or the 85280. The argument is a character string with allowed values of `yes' or `no'. The default is `no'.

vector
this keyword is optional and specifies the address of the vector latch (also known as "intack port") for PA0HZP cards. There can be only one vector latch for all chips. The default is 0.

special
this keyword is optional and specifies the address of the special function register on several cards. The default is 0.

```
option
this keyword is optional and defaults to 0.

Some example configurations for the more popular cards are as follows:

BayCom USCC

chip 1
data_a 0x300
ctrl_a 0x304
data_b 0x301
ctrl_b 0x305
irq 5
board BAYCOM
#
# SCC chip 2
#
chip 2
data_a 0x302
ctrl_a 0x306
data_b 0x303
ctrl_b 0x307
board BAYCOM

PA0HZP SCC card

chip 1
data_a 0x153
data_b 0x151
ctrl_a 0x152
ctrl_b 0x150
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
#
#
#
chip 2
data_a 0x157
data_b 0x155
ctrl_a 0x156
ctrl_b 0x154
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no

DRSI SCC card
```

```
chip 1
data_a 0x303
data_b 0x301
ctrl_a 0x302
ctrl_b 0x300
irq 7
pclock 4915200
board DRSI
escc no
```

If you already have a working configuration for your card under NOS, then you can use the gencfg command to convert the PE1CHL NOS driver commands into a form suitable for use in the z8530 driver configuration file.

To use gencfg you simply invoke it with the same parameters as you used for the PE1CHL driver in NET/NOS. For example:

```
# gencfg 2 0x150 4 2 0 1 0x168 9 4915200
```

will generate a skeleton configuration for the OptoSCC card.

12.2.2. Channel Configuration

The Channel Configuration section is where you specify all of the other parameters associated with the port you are configuring. Again this section is broken into stanzas. One stanza represents one logical port, and therefore there would be two of these for each one of the hardware parameters stanzas as each 8530 SCC supports two ports.

These keywords and arguments are also written to the /etc/z8530drv.rc file and must appear after the hardware parameters section.

Sequence is very important in this section, but if you stick with the suggested sequence it should work ok. The keywords and arguments are:

device
this keyword must be the first line of a port definition and specifies the name of the special device file that the rest of the configuration applies to. e.g. /dev/scc0

speed
this keyword specifies the speed in bits per second of the interface. The argument is an integer: e.g. 1200

clock
this keyword specifies where the clock for the data will be sourced. Allowable values are:

dpll
normal halfduplex operation

external
MODEM supplies its own Rx/Tx clock

divider
use fullduplex divider if installed.

mode
this keyword specifies the data coding to be used. Allowable
arguments are: nrzi or nrz

rxbuffers
this keyword specifies the number of receive buffers to allocate
memory for. The argument is an integer, e.g. 8.

txbuffers
this keyword specifies the number of transmit buffers to
allocate memory for. The argument is an integer, e.g. 8.

bufsize
this keyword specifies the size of the receive and transmit
buffers. The arguments is in bytes and represents the total
length of the frame, so it must also take into account the AX.25
headers and not just the length of the data field. This keyword
is optional and default to 384

txdelay
the KISS transmit delay value, the argument is an integer in mS.

persist
the KISS persist value, the argument is an integer.

slot
the KISS slot time value, the argument is an integer in mS.

tail
the KISS transmit tail value, the argument is an integer in mS.

fulldup
the KISS full duplex flag, the argument is an integer. 1==Full
Duplex, 0==Half Duplex.

wait
the KISS wait value, the argument is an integer in mS.

min
the KISS min value, the argument is an integer in S.

maxkey
the KISS maximum keyup time, the argument is an integer in S.

idle
the KISS idle timer value, the argument is an integer in S.

maxdef
the KISS maxdef value, the argument is an integer.

group
the KISS group value, the argument is an integer.

txoff
the KISS txoff value, the argument is an integer in mS.

softdcd
the KISS softdcd value, the argument is an integer.

slip
the KISS slip flag, the argument is an integer.

12.3. Using the driver.

To use the driver you simply treat the /dev/scc* devices just as you would a serial tty device with a KISS TNC connected to it. For example, to configure Linux Kernel networking to use your SCC card you could use something like:

axattach -s 4800 /dev/scc0 VK2KTJ

You can also use NOS to attach to it in precisely the same way. From JNOS for example you would use something like:
attach asy scc0 0 ax25 scc0 256 256 4800

12.4. The sccstat and sccparam tools.

To assist in the diagnosis of problems you can use the sccstat program to display the current configuration of an SCC device. To use it try:

sccstat /dev/scc0

you will displayed a very large amount of information relating to the configuration and health of the /dev/scc0 SCC port.

The sccparam command allows you to change or modify a configuration after you have booted. Its syntax is very similar to the NOS param command, so to set the txtail setting of a device to 100mS you would use:

sccparam /dev/scc0 txtail 0x8

13. Configuring an interface for a Baycom modem.

Thomas Sailer, <sailer@ife.ee.ethz.ch>, despite the popularly held belief that it would not work very well, has developed Linux support for Baycom modems. His driver supports the Ser12 serial port, Par96 and the enhanced Par97 parallel port modems.

When the driver is running it follows the standard of looking like a KISS interface, so you treat it in much the same way as you would the PI card, PacketTwin or SCC driver ports.

13.1. Compiling the kernel

The driver is only available as a module, so you must have compiled module support into your kernel, and also selected the appopriate options to support the Baycom driver during the make config stage when compiling your kernel.

The relevant options that you must answer `Y' for are:

Radio network interfaces (CONFIG_NET_RADIO) [N/y/?]
BAYCOM ser12 and par96 kiss emulation driver for AX.25 (CONFIG_BAYCOM) [N/y/m/?]

13.2. Creating the /dev device files.

The Baycom driver uses special device files in the /dev directory.
You need to create these manually. The following commands should work
ok for you:

mknod /dev/bc0 c 60 0
mknod /dev/bc1 c 60 1
mknod /dev/bc2 c 60 2
mknod /dev/bc3 c 60 3

You will use these later.

13.3. Loading the module.

When the kernel compilation is complete and you have installed the
module baycom.o wherever you normally keep your modules
(conventionally they are stored in /lib/modules/2.0.0/), you must
start the module. The module takes configuration paramters from the
insmod command line, so you must start it manually from an rc file or
if you use the kerneld program you must configure it with the relevant
paramters so that it supplies them when it loads the module.

If you use kerneld you will need to add the following line to your
/etc/conf.modules file:

alias char-major-60 baycom

There are four main items to specify when loading the module, they
are:

modem
the baycom modem type you are configuring it for.

1. Ser12 type modem.

2. Par96 or Par97 type modem.

iobase
the i/o address of the serial or parallel port you will use.

0x3f8
COM1:

0x2f8
COM2:

0x378
LPT1:

0x278
LPT2:

irq
the Interrupt Request (IRQ) line your port will use.

4 COM1:

3 COM2:

7 LPT1:

5 LPT2:

options
some baycom specific options.

0 use hardware generated DCD signal.

1 use software DCD signal.

13.4. A small trap to be aware of.

Because the Baycom driver uses the serial and parallel ports of your machines, and because it is a low level driver for these, it competes with the existing serial and parallel drivers in the kernel. There are some ways of working around this problem. The first way is to make sure that you load the Baycom module first so that it takes the hardware it needs before the serial or parallel device driver modules load and search for their own. With the serial driver you have the luxury of being able to disable it for a single port using the setserial command, this will be demonstrated in the examples. If you are using the parallel port modems then beware of the lp.o Line Printer and plip.o Parallel Line IP modules.

13.5. Some example configurations.

These examples are for the two most common configurations.

Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod baycom modem=1 iobase=0x3f8 irq=4 options=1
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod baycom modem=2 iobase=0x378 irq=7 options=0
```

The first device created is /dev/bc0, the second is /dev/bc1 etc.

13.6. Configuring multiple devices.

Using the insmod program and its command line arguments you can only configure one Baycom modem. There is a setbaycom utility which I have not yet located that will allow you to configure others. If you happen to find it please let me know where it is kept so that I can include details for it here.

13.7. Actually using the devices.

This device driver when loaded looks like a serial tty driver with a KISS TNC attached. This means that configuration of the AX.25 software for this driver is identical to the configuration for a KISS TNC presented earlier. You need to use the axattach program and add the port to your /usr/local/etc/axports file. The only difference is that you would use the device /dev/bc0 instead of /dev/ttyS0.

14. Configuring ax25d to accept incoming AX.25/Netrom connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25 or NetRom connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they connect?". As detailed in the HAM-HOWTO there are BBS systems that are being developed that you might want users to see when they connect, alternatively you might want to give users a login prompt so that they can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

14.1. Creating the /usr/local/etc/ax25d.conf file.

This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25 and NetRom connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practice, with a small trap for you to be wary of.

The format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[<interface_call>]
<peer1> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
defaults window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer3> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
default window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
```

Where:

at the start of a line marks a comment and is completely ignored by the ax25d program.

<interface_call>
is the AX.25 callsign of the AX.25 or NetRom interface that this particular paragraph is for.

<peer>
is the callsign of the peer node that this particular
configuration applies to. If you don't specify an SSID here then
any SSID will match.

window
is the AX.25 Window parameter (K) or MAXFRAME parameter for this
configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another
incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software
will disconnect the session in 1 second units.

N2 is the number of consecutive retransmissions that will occur
before the connection is closed.

<mode>
provides a mechanism for determining certain types of general
permissions. The modes are enabled or disabled by setting or
resetting bits in an 8 bit map. You set that map by setting
<mode> to the sum of the following values:

1 Setup utmp, and run on a ptty (planned).

2 UNUSED.

4 UNUSED.

8 UNUSED.

16 UNUSED.

32 UNUSED.

64 Disallow digipeated uplinks, only allow direct connections.

128
Lockout, Barred, immediate disconnect.

<uid>
is the userid that the program to be run to support the
connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments
specified.

<cmd-name>
is the text that should appear in a ps as the command name
running (normally the same as <cmd> except without the directory
path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it is run. You pass useful information into these arguments by use of the following tokens:

%U AX.25 callsign of the connected party without the SSID, in uppercase.

%u AX.25 callsign of the connected party without the SSID, in lowercase.

%S AX.25 callsign of the connected party with the SSID, in uppercase.

%s AX.25 callsign of the connected party with the SSID, in lowercase.

You need one section in the above format for each AX.25 or NetRom interface you want to accept incoming AX.25 or NetRom connections on.

There are two special lines in the paragraph, one starts with the string `defaults' and other starts with the string `default' (yes there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a catch-all, so that any incoming connection on the <interface_call> interface that doesn't have a specific rule will match the `default' rule. If you don't have a `default' rule, then any connections not matching any specific rule will be disconnected immediately without notice.

The `defaults' line is a little more subtle, and here is the trap I mentioned earlier. In any of the fields for any definition for a peer you can use the `*' character to say `use the default value'. The `default' line is what sets those default values. The kernel software itself has some defaults which will be used if you don't specify any. The trap is that the these defaults apply only to those rules below the `default' line not to those above. You may have more than one `default' rule per interface definition, and in this way you may create groups of default configurations.

14.2. A simple example ax25d.conf file.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 21/11/95
# This configuration uses the AX.25 port defined earlier.
[VK2KTJ-1]
NOCALL * * * * * 0 guest /usr/games/fortune
defaults 1 10 * * * 0 root /usr/local/sbin/axspawn axspawn %u +
VK2XLZ-1 * * * * * * * * *
VK2DAY-1 * * * * * * * * *
default 1 10 5 100 5 0 root /usr/local/bin/pms pms -a -o vk2ktj
#
```

This example says that anybody connecting to the interface on my machine with the callsign VK2KTJ-1 will have the following rules applied:

Anyone whose callsign is set to `NOCALL' should use the kernel default parameters and have the fortune program run as guest for them.

The defaults line changes two parameters from the kernel defaults (Window and T1) and will run the /usr/local/sbin/axspawn program for them. Any copies of /usr/local/sbin/axspawn run this way will appear as axspawn in a ps listing for convenience. The next two lines definitions for two stations who will receive those permissions.

The last line in the paragraph is the `catch all' definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the pms program to be run with a command line argument indicating that it is being run for an AX.25 connection (assuming VK2KTJ-1 to be an AX.25 interface) and that the owner callsign is VK2KTJ. (See the `Configuring the PMS' section below for more details).

If you wanted to define rules for another interface, a NetRom interface for example, then you would add another paragraph coded in the same way with rules and callsign appropriate to it.

This example is a contrived one but I think it illustrates clearly the important features of the syntax of the configuration file. Jonathon includes a much longer and more detailed example in the ax25-utils package that you should look at if you need more information.

14.3. Starting ax25d

When you have the two configuration files completed you start ax25d with the command:

/usr/local/sbin/ax25d

When this is run people should be able to make AX.25 connections to your Linux machine. Remember to put the ax25d command in your rc files so that it is started automatically when you reboot each time.

14.4. Configuring axspawn.

The axspawn program is a simple program that allows AX.25 stations who connect to be log in to your machine. It is invoked from the ax25d program as described above. To allow a user to log in to your machine you should add a line similar to the following into your /usr/local/etc/ax25d.conf file:

default * * * * * 1 root /usr/local/sbin/axspawn axspawn %u

If the line ends in the + character then the connecting user must hit return before they will be allowed to login. The default is to not wait. Any individual host configurations that follow this line will

have the axspawn program run when they connect. When axspawn is run it first checks that the command line argument it is supplied is a legal callsign, strips the SSID, then it checks that /etc/passwd file to see if that user has an account configured. If there is an account, and the password is either "" (null) or + then the user is logged in, if there is anything in the password field the user is prompted to enter a password. If there is not an existing account in the /etc/passwd file then axspawn may be configured to automatically create one.

14.4.1. Creating the /usr/local/etc/axspawn.conf file.

You can alter the behaviour of axspawn in various ways by use of the /usr/local/etc/axspawn.conf file. This file is formatted as follows:

```
# /usr/local/etc/axspawn.conf
#
# allow automatic creation of user accounts
create yes
#
# guest user if above is 'no' or everything else fails. Disable with "no"
guest no
#
# group id or name for autoaccount
group ax25
#
# first user id to use
first_uid 2001
#
# maximum user id
max_uid 3000
#
# where to add the home directory for the new users
home /home/ax25
#
# user shell
shell /bin/bash
#
# bind user id to callsign for outgoing connects.
associate yes
```

The eight configurable characteristics of axspawn are as follows:

```
# indicates a comment.
```

```
create
if this field is set to yes then axspawn will attempt to
automatically create a user account for any user who connects
and does not already have an entry in the /etc/passwd file.
```

```
guest
this field names the login name of the account that will be used
for people who connect who do not already have accounts if
```

create is set to no. This is usually ax25 or guest.

group
this field names the group name that will be used for any users
who connect and do not already have an entry in the /etc/passwd
file.

first_uid
this is the number of the first userid that will be
automatically created for new users.

max_uid
this is the maximum number that will be used for the userid of
new users.

home
this is the home (login) directory of new users.

CW or not, what is the big deal about HF?? Why should we care?

> 1) For most non-hams, the facination of amateur radio is the idea of
> communicating long distances via radio in real time.
>
> 2) For the most part, this means HF privileges.

I am sorry to say I agree with this. Certainly majority
rules in this hobby. What dissappoints me is how many
people still seem to think operating on HF is a big deal.
This does indeed appear to be the opinion of the majority
in this hobby/service.

It seems that regardless of the code vs no-code debate,
MOST HAMS seem to think HF is the place to be and THEY
want to be there too. This attitude needs to change if
the hobby is to survive.

Radio was not invented just yesterday. Can we get over this
fascination with DX communication on HF via analog modulation
methods?? Meanwhile the commecrcial world has passed us by and
is putting even greater distance between us and them with each
passing day. The spectrum battles on 2-meters and up (and I
believe 900MHz and up using digital modulation techniques is
where today's RF knowledge can be gained and where fun can be
had) should be a wake up call to ham radio.

Instead we have an incentive system that makes HF seem like the
place to be. If amateur radio is to survive, it needs to attract
people whose interests are in the bands and communication techniques
typical of the 21st century, NOT the early 20th.

We should be looking at communications techniques as a whole, not
just an emphasis on analog RF alone. Many years ago, analog RF WAS
electronics. Analog RF WAS communications. But that is no longer
true. This hobby can benefit from people skilled at telecommunication
protocols and software justs as much as it can benefit from an expert

on antenna grounding and protection techniques.

But so long as the incentive system, licenses classes and the
ARRL (via their contests, awards, certificates and the like) portray
knowledge of HF, analog and (can you believe it?) CW, as the path
to respect and recognition in amateur radio, the hobby is doomed.

I am not advocating the elimination of any existing bands or
modes of operation. I am suggesting changes in the incentive
system so as to reflect the communications (not just radio) methods
commonly used today on UHF and above. The bands of the future will
not be on HF. Amateur radio must realize this or face extinction.

Of course, you need a majority to think this way before anything
can be changed in this hobby. But by the time that happens,
it may be too late and our bands (the GOOD ones on 70cm and up)
will be gone.

I'll no doubt be royally flamed for this, but if a hobby is set up
to attract and keep people who think "HF is cool", is it any wonder
the hobby is so far behind the times technically?

Amateur radio is little more than "CB with an attitude".
Few experiment. Few build. Few want to really learn.

```
Forsale: HF radio used by Stazi (former East-German secret police) in
excellent condition

Radio covers 1.6-12 MHz in 1 kHz steps synthesized & VFO
Modes: USB,LSB,AM (A3J / A3H / A2J )
Antanna tuner is built-in. RF power 20 watt peak and average in SSB
Radio can be used as man-pack, as mobile radio or stationary radio
Size: 4.3"x14.2"x12", weight 17.5 lb
Comes with separate AC power supply, whip antenna, telemike and user
manual
Runs from either the AC power supply or from a 24V 4A DC source

$550, shipping not included

I don't know of too many people who exchange QSL cards for VHF
contacts (other than 6 meters, that is). Perhaps you'll be kind enough
to detail the numerous threats to our HF spectrum, where QSL card
exchanges are predominent.

Amateur Radio is the place for ALL forms of radio activity, nostalgic or leading edge (well, relatively speaking anyway). As a fraternity, we should be encouraging this spread of activity.

I started in electronics when germanium transistors were hot property (literally from thermal run-away) and valves were bread and butter. I wouldn't consider using valves in a project, but I still like to see the craftmanship that was evident with the loomed wiring, component leads bent just so around the terminal posts, etc. The vintage cars of radio.

Mark.

Burt, you draw it in on yourself. But remember that your pleas for us
to believe you're *not* a pedophile and a pornographer on the basis of
having been victim of an imposter work two ways...maybe Tim Smith
didn't really write this stuff, either. We can't prove you're a
pervert, and for the very same reasons you can't prove Tim a purveyor
of libel. An interesting and humorous symmetry exists here!

If you'd shut your yap there wouldn't be a problem...but, hey, you
like it, I'm convinced.

Always wonder why someone who professes to hold the ham community in
such disdain always includes his call in his tagline. You sure seem
to have a need to be recognized...as a ham. Something just not right
with the inconsistent messages you send. And your recent obsession
with pigs...and a call like k1oiNk...leaves a reasonable person to

wonder, don't it?

Burt, get help before it's too late.

Bob, or an imposter, sends

>a real commercial lobby existed, then believe the allocations could
>be justified.

Even with 5 million hams, the amount of revenue will be modest indeed when compared to any commercial communications service. We'll never be able to generate enough economic impact to justify our spectrum allocations ... public interest value through public service activities and technical advancement/experimentation are our only chances at justifying our allocations.

>Do I think this will happen anytime soon? No. I'm still
>seeing 'hams' chasing off "digital experimenters" when they ask
>questions on some of the amateur newsgroups.

Ham radio has tried to chase off anything that smells like progress for the past 30 years ... if it doesn't involve a key and Morse code, it smells like progress to the old guard ...

>If 'ham' radio can ever drop its socialist mindset, (PROFIT = dirty
>word) we might have a chance of having a viable service that can stand
>on its own two feet.

We're never going to make a profit using our bands ... but there still remain many opportunities for technically inclined hams to develop new technologies that may, in addition to ham applications, have commercial applications ... this would be valuable use of our spectrum in the eyes of the regulators ...

We will always have to "stand on our own two feet" in the regulatory sense on the basis of providing public interest payback through public service/emergency communications and through the value of a "pool of technically savy experimenters" who contribute to the advancement of the radio art. The "It's *only* a hobby!" folks contribute NOTHING of value to the regulators who allow us access to spectrum ... zero, zip, nada ...

Tony,
According to the ARRL website Newsletter update today, the FCC has
made its way through about one half the first day apps. If we
extraploate, I'd say it will be another two or three weeks, and as I
understand it, no calls will be issued until all of the first day group
of apps has been entered.
Me? I spent today out snapping pictures of Diamond Head crater to use
on my new QSL card. I'm eager too!
I hope you get your first choice!

I don't participate in contests myself, other than finding that contests offer a ready supply of hams for short term antenna or rig tests. Usually I'm "worth" a few points to the contesters, not a lot, but some. Also, some hard core contesters go at it all day long, and are useful signal sources for antenna adjustments.

Hey Burt. Do us all a favor. Take that gun you keep by your bed to fend off burglars, (and pissed off hams), put it in your mouth and pull the trigger. Your wife and the ham community will be glad you did.

This guy got his ass run off the HF bands for the same thing he's pulling here. Some guy made some threats toward him and he ran away selling his equipment. Thats why he hates hams and calls them pigs. He is a mental case and needs help. Ask his wife.

What a ridiculous statement! I don't care how many people post it, your statement is patently ridiculous, and flies in the face of the experience of those of us who consistently work DX using CW, when SSB is not getting through because of poor band conditions! What a crock!

Total nonsense. Same old hackneyed rhetoric and disinformation. Absolutely untrue. He offers not a shred of proof to support this wild charge.

> We will always have to "stand on our own two feet" in the regulatory
> sense on the basis of providing public interest payback

Ham radio is a hobby with a public service aspect. Hams have, over the years, consistently proved their value through disaster after disaster. That public service will continue. Meanwhile, in between disasters, ham radio experimentation, contesting, dxing and rag chewing keep us involved and our skills sharp so that when we are needed, we will, once again, be ready. Perhaps we are not indispensable these days, but fortunately, we do not have to be indispensable to be invaluable to the authorities as volunteers in emergencies and in support of public events.

5050. Re: Is equipment building and repair a lost art? Y

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-14 00:00:00 UTC
From: shendo@access-one.com
Message-ID: <tcpnntpd.16.10.14.23.28.8.3046360759.1381502@access-one.com>
Source record: 214762

Working on equipment has been a lost art for hams for sometime. One reason is most dont want to do it and the second is the new circuit paths are so tiny most cant do it. ie circiut paths on HT boards if a small drop of solder hit it it would bridge about a dozen or more paths.

I enjoy working on my gear. My IC-735 was dropped during shipping and want insured for the amount that I bought it from the buyer. So I decided to look into the problem myself.

1. The VFO was not responding to the turn of the axle.

ICOMS labor is 65.00/hr. I cant afford that. So I decided that I would send it to Icom only if I for my monies worth and I screwed it up. :)

I opened the rig up and removed the VFO xle assembly. The light encoder / reciever for the VFO knob inside the brass axle case was smashed with the circuit board for the light encoder unit. The circuit paths were not that complex so I dug out my Etching solution and reetched another circuit board. Not as neat as Icoms circuit paths but the same fasion. I desoldered the parts from the broken board and resoldered them to my new board. Reassembled the axle and it worked.

Nothing major ..... but I was happy and saved me a bundle of money and heartaches. That was 4 years ago. I have fixed all my gear except one....and that I sent to Icom. It needed a EXPERT going through with good test equpiment. Its a early make IC32AT dual bander. Early EARLY 3 digit serial number. I dont have the test equipment to fix it. Soo this one will go off to the company.

I fix radios for my friends all the time now. I charge nothing except for parts....and thats at no profit.....I pay 12.00 they pay 12.00 nothing gained. Only thing I ask is they watch me fix it...so they learn a little out of it. If they dont want to watch me then thats ok too.

I work on both HAMS and CBs for folks. Most of the CBrs I have helped are now ham operators. I enjoy elmering too.

Anyway 73 to all

>Will it be alive, as we know it, in 10-20 yrs.? Your opinions please.

Depends on what you mean by "as we know it". If it remains the backward looking old man's *hobby* it has become, I think it will be mostly gone in 20 years. But if we can reinvigorate the service and bring it back to its charter purposes as a self-directed experimental laboratory and training ground for our future technologists and communications specialists, I think it will be going strong in 20 years.

Sadly, too many of today's operators are so far from the cutting edge of communications technology they can't even see it. Rather than eagerly exploring and adopting newer techniques more relevant to today's technical needs, too many are fighting a rearguard action to keep new methods and ideas out of amateur radio. That's directly in opposition to the reason the amateur service was created.

To a large extent, amateur radio was intended as a job training program, IE to create and maintain a ready pool of operators skilled in the radio arts. It does little good to train old men, and even less good to train them in obsolescent technique. The amateur service needs to get lots younger over the next 20 years, as it was in earlier times when large numbers of amateurs were in their teens and early twenties. And the techniques it needs to emphasize are those of most modern application in the communications field, IE those which remain in demand *outside* of amateur radio.

Amateur radio was intended to advance the radio arts, but today the advances in the radio arts are primarily digital and often revolve around networking. Some amateurs have contributed to that advance, but too many have fought it. That too needs to change.

Almost uniquely, US amateur radio has a public service and emergency communications charge missing from the international definition of amateur radio. (In fact the international regulations forbid the third party messages essential to public service and emergency communications.) While many amateurs still want to hang their hats on these applications of amateur radio, their importance is waning as other communications technologies pass by those of the average amateur, IE much of what the average amateur can do is no longer relevant to the communications needs he is charged to serve. That must change also.

If amateur radio remains as we know it, it will be gone, and likely properly so because it no longer lives up to the purposes for which it was created.

Gary

5053. Code or No Code...

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-14 00:00:00 UTC
From: bgeiger@yhc.EDU
Message-ID: <01BBB973.E6AB8A80@yhc.yhc.edu>
Source record: 214765

I posted the original article, and maybe I should clarify what I said. =
As far as the "morse is the most readable" claims, I don't have any =
proof, but I still believe it from my own experience. Again, I am only =
a tech-plus, but of the modes I have seen, morse is *the* most readable. =
I have used morse, AM, SSB, FM, VHF Packet, and I have listened to (and =
successfully copied) HF Packet and other modes...(not necessarily on ham =
radio, some on CB, but LEGALLY!!!) I have much extreme QRM and QRN due =
to my low antennas and local (illegal) CBers. =20

And in regards to my claim as to hams having to "work" for their =
licenses... my only excuse is that that message was written at 3 AM... =
I agree with Mr. Stevenson about the technical knowledge. Maybe I was =
referring to those people who try to get a high level license by simply =
reading one or two books and knowing code(which I still support). Let =
me rephrase my original statement: Hams should not be able to get =
priveleges without having the requisite knowledge, and actually KNOWING =
the material, instead of memorizing answers. It's 3 AM again, so I'm =
not thinking straight, but I reread my statements and have confirmed =
them.

Here we go again. The offer for fried spam still stands.

>>
>>
>Carl,
> First things first. Who cares about the FCC?

We ALL had BETTER care about the FCC ... they make the rules (at the behest of the ARRL much of the time, unfortunately) and they control our access to the spectrum ... if we don't "live up to their expectations" based on the purposes and justification for establishing the service (see Part 97), they can (and will) pull the plug on us ... and there are LOTs of other users who would love to have "our" bands ... they'd even be willing to pay billions of dollars for them at auction, given an opportunity to bid.

>Second, I
>understand that Amateur Radio can play an important role as a service.
>(hence the I agree with ...). However it is primarily for enjoyment.

You keep insisting this, but I'll bet you a buck that you can't find a single statement to that effect in Part 97 ... and (here in the US) Part 97 is ALL that counts WRT defining the purpose of ham radio ...

What I've been preaching is that hams (contesters, DXers, etc.) have perverted their own view what's enjoyable to them into *their idea* of the purpose of ham radio to the point where it no longer resembles the true (statutory) purpose ... this is dangerous, because if we don't fullfill our true, statutory purpose, we're not keeping our end of the bargain and stand to lose our frequency allocations to someone who will keep their part of the bargain (and pay a lot of money for it, too).

>Again you can't make a living at it. It's not proffessional. I don't
>mean to demean the purpose and role of radio at all. It is extremely
>important to me, but I won't go shoving it down people's throats that it
>is an essential service.

You'd better hope that the FCC continues to think we're essential ... or we're screwed ...

> What scares me about saying it is a service is that people who are >just having fun on radio will get pushed aside for service renderers. You >know, "HEY THIS FREQS FOR A NET FOR BLA BLA BAL SO STAY OFF THANKS."

Depends on the purpose of the net ... if it's a bonified emergency net (not weekly ARES/RACES "roll-call" ...) it DESERVES the frequency, hands down, no question. I have personally heard numerous instances of bonafied emergency communications being jammed deliberately by a small group of crochety old farts who refused to temporarily abandon their rag-chew because "they (the crochety old farts) were there first and you (the people trying to handle emergency traffic) don't own the frequency" or some similarly lame excuse for being lids.

I can envision the need in the future to prioritize our use of our spectrum ... if we don't provide the services that are expected of us because "we're too busy having fun" we'll fail some future evaluation miserably and lose our frequencies to someone who will make better use of them.

We have to start accepting the concept of assigning some "value" or "figure of merit" to various activities, because the regulators WILL ... they'll value us on something like:

Value_of_ham_radio = val(activity_A)*users/MHz + ...
val(activity_B)*users/MHz + ...
val(activity_C)*users/MHz + ...
val(activity_n)*users/MHz

Some activities, while FUN, may still have very low public interest (where interest is like in self-interest as in "what's in it for me?") "value" to the regulators (contests, DXing, and collecting 10-10 numbers come to mind as acativities which would likely fall into this category ..) other activities like emergency and other public service communications will have a much higher "value" to the regulators ... Experimentation and technical investigations aimed at advancing the radio art and improving either the amateur community's knowledge base or effieciency in use of the spectrum (or both) would rank high with the regulators.

While contesters, DXers and 10-10 members may have a hell of a lot of fun "doing their thing", the have to grow up and be adult enough to realize those were not the things that were foremost in the minds of the regulators when they decided that ham radio had enough public interest value to allocate us all of those valuable bands.

As I wrote this, I had forgotten that you're Canadian ... I suspect that with your smaller population and lower population density there may not be quite the same level of pressure on the spectrum (at least in much of) in Canada ... here in the US it's fierce, and the regulators are VERY enamoured with the spectrum auction ... it saves them the trouble of figuring out what's the "best use" (on the {sometimes false}

presumption that the "best use" will command the highest bid)
and it has already raised BILLIONS of dollars of revenue for the
government ...

I doubt that the bandwidh reference had any relationship to
the radio spectrum at all. The comment most likely is
in reference to commercial digital bandwidth being available
on a fibre optic and/or other hard transmission systems.

Just my thoughts.

Well Kevin, that explains a lot. If I had just crawled out from under a rock after thirteen years I would also find the HF bands to be a different place. If indeed you are whining about the QRM that contesters supposedly create, maybe you should think about upgrading your 13 + year old radio for something built in the last few years.

Furthermore, I don't think I over-reacted. In fact, after you posted your most recent followup, I think my reaction is entirely justified. I would be willing to bet that contesters and non-contesters alike think that your categorization of hams that contest as being "pigs" is a bit much, especially from someone that has had their head in the sand for at least the last thirteen years.

: P.S. YOU grow up.

You started this thread by calling contesters pigs....

From: sidener@munch.nuc.umr.edu
Message-ID: <53s2ao$39f@hptemp1.cc.umr.edu>
Source record: 214907

HI, I am having trouble with a Ramsey Model FX-50 6Meter radio kit.

Everything seems to work fine except when I transmit the final transistor (Q8) gets very hot and blows in a short time. I have triple checked all of the circuitry in the final amplifier section and there are no shorts or bad parts that I can find. If I remove the final transistor and replace it with a 100pF cap. I can get a few milliwatts out the end from the exciter transistor.

Has anyone ever had this problem? I called Ramsey and they just quote the troubleshooting section of the manual which doesn't say much.

I even injected RF where the transister should be and varied the freq. and looked at it on a spectrum analyzer out the end to see if the output network was working correctly. It seems to act as a bandpass filter just as it should.

I would appreciate any help you may be able to offer.

Thanks,

Scott Sidener N0WFL

>
>
>Jeff KH2PZ

I'm afraid I can't get the correlation between getting a desire to build from having to learn a code. But that's Ok, because that's what triggered you. The question is whether YOUR personal motivations should be the basis for determining licence entry conditions. If yours, why not mine, or anyone elses for that matter?

The regulations should not be decided on personal preferences, it should be on what the regulations require amateurs do do as a minimum. Personal preference comes AFTER an amateur has satisfied the minimum requiremetnts to be on air. The minimum requirements are those that an amateur is REQUIRED to continue to know and/or do AFTER the licence has been granted.

If you examine what a licencee needs to know, the examination topics then become obvious. What does the amateur have to know or do after the licence has been issued? Any thing that is REQUIRED (not preferred or liked or desired) is a valid examination topic. Anything that an amateur is not REQUIRED after being handed the licence, is not a valid topic as it does not test the licencee's knowledge of what is required.

Taking the international regulations, the knowledge of Morse is not required as an amateur does not need to know or use Morse after the exam. Secondly, internationally speaking, there are no Morse only segments in the HF bands or elsewhere. Therefore Morse is an inappropriate subject for licencing.

If there were internationally mandated Morse segments, then there certainly would be an overwhelming case for the Morse exam. The same would apply is amateurs were required to maintain a standard of Morse after the exam.

Exams should examine what is required, not what is desired,
Mark.

5068. Mitsubishi RF Power Module datasheets

Hmm. Not sure if you are referring to me or not...

For the record, I have an Extra ticket, and have logged thousands of CW
QSOs. Got nothing against CW, except that it is outmoded as something that
ought to be a *requirement* for any kind of ham ticket.

As far as contests go, I've worked my share. Not my cup of tea, but I would
be the last person to insist that they be banned. On the other hand,
contesters are more or less unique in that they inherently and systematically
seem to disregard the rights of other non-contesting hams. They will
disregard band plans, call cq right on top of other stations they can hear, etc.
It is no wonder that the amateur community would like some restrictions
placed on this form of activity.

Mark:
You are mostly correct, but as a matter of fact there are
CW only segments, and the ITU convention does require hams to have
knowledge of the morse code.

It says "knowledge" not ability. Therefore, the test could
be as simple as some dumb questions like
(1) What is the dot-dash pattern for the letter Q ?

(a) da-di-da-da (b) di-di-da (3) da-da-di-da (4) da-di-da

From this ultra simple thing, which would of course require that
someone know the morse code well enough to at least pick the right
answer from the four given, to a 5 WPM, 13WPM or 20WPM test lies
a vast gulf of possibilities. Clearly, for the FCC to continue
to follow the ITU regulations (and not exempt itself, which is allowed),
it need only test for code as outlined above. Simple deal. If
someone can't memorize ten numbers, four punctuation marks, a couple
or three prosigns and 26 letters, well.... but no speed or actual
copying code would be required. If this won't fly, perhaps a
5WPM test for even extra class license would be possible.

I always noted with a chuckle that while the FCC tests for CW ability,
they do not test you for being able to give a speech over a mike
before allowing voice modes. Heh heh.

On HF, the so called CW sub bands are shared with digital data modes.
In fact, CW can operate anywhere on any band, and digital only
outside the voice portion except on VHF, where there are truly
CW-only sub bands for weak signal work, eme and stuff like that.

This is not to say that some should not be created on HF (cw only that is). But I see no reason to test for ability on CW. Clearly if a ham has a no-code license that allows unlimited HF privileges, he is allowed to operate CW on the CW sub bands. Why not? If he does not know the code, he will not venture there. If he knows it, or takes an interest and learns it, why should he not be allowed to jump in without further ado, even at a faltering 4 or 5 WPM? Seems like we did the same as Novices! And made lots of CW QSO's with patient upper-class hams too!

CW is a good mode, I love it and use it. But I sure don't think cramming a code test down someone's throat is a good idea or even good for the hobby. Not in 1996 or in the 21st century just five years away now.

Don't be surprised if the things you mention really does happen. These damned politicians are trying to ram more and more laws down our throats every day. All it will take is some fruitcake special interest group to donate half a million dollars to re-elect some bozo, (I purposly left it lower case because I don't want to insult some clown) and lobby for a bill that requires a professional lifeguard to be on duty and there goes your backyard pool. There are those out there that are already trying to take our cars away and the reason that they have not succeeded is that the major automobile manufacturers have more pull in Washington.

Anyway, I wish you well Ken, but instead of leaving the hobby you can always start using indoor antennas, or antennas that are ground-mounted.

73 from Steve

P.S. I heard the tail end of a news report about a 1500 foot tower falling down over the weekend. Does anybody know the full story?

I love that CQ t-shirt that says "My wife said if I didn't get off of the radio, she'd leave me ... over"

I'm fortunate enough to have a wife and daughters that are all involved in the hobby. We make it a great family activity, volunteering together, being involved with clubs, schools, etc.

Just my $0.01 (after taxes.)

> become impossible.

Calling CQ on a used frequency is not an acceptable practice, regardless
of
the activity. I agree that this happens during contests but it also
happens
outside of contests. I'd argue that this is a problem with the
individual
who does this and not contesting itself.

I was taught to listen to a seemingly clear frequency, ask if it's in
use and
only then to call CQ. Things would probably be better if everyone else
did
the same.

Now when you take skip zones into account.... yuck!

>I still stand by my original math.

Let's use that math & put contests on Tuesday through Thursday only. That will also test your better equipped station, your technica=
l advances & your operating skills in a different fashion not to mention.

>For a phone DX contest
>1) All bands, with the possible exception of 20M and 15M during periods of
>high solar activity, will have plenty of open space still available.

Gee, I'd like to use the bands when in real good shape, too. You're saying the contesters get the band when it's at peak performanc=
e?

>2) The CW and Digital portions of the bands will be completely unused by
>contesters.
>
>During CW contests, band congestion really is not much of a problem.
>There is always room higher up in the band.

I didn't observe this in the 70's & I don't buy it now.

>I am really at a loss as to what the anti-contesting crowd is bitching
>about. If I had to venture a guess, I'd say that they resent the better
>equipped stations, technical advances and operating skills that most
>serious contesters exhibit.

>The issue is certainly not spectrum utilization, more likely spectrum
>bigotry.

So, I'm selfish if I like the idea of one weekend out of the year with no contests on any band. Gary, Gary, Gary! Maybe you need t=
o take some of your own advice to my original one line post. Maybe you need to take the wife/girlfriend/whatever out.

I believe my post was, "Is there a weekend that does not have any contests?" So what is 'perjorative' in that post?

Just my opinion.

Of course, when setting a dinner table on the moon, the food is not the difficult part, the wine is. Have you ever tried to set a proper table including water and wine glasses in 12% gravity? It's all you can do to keep the tablecloth from floating up and upsetting the decanter! Not to mention the horrors of decanting the wine in the first place without mixing-in the dregs. And remember, when setting a table of food on the moon, unlike earth, the fork always goes on the right-hand side, and serving swiss cheese is very bad form.

When sending a signal from the moon, it helps to have a good earth ground!

5082. 'Nother Pro-code Luddite

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-14 00:00:00 UTC
From: carl@ais.net
Message-ID: <53ttbq$aln@news.ais.net>
Source record: 214924
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I received a rather typical pro-code flame e-mail today that I thought I'd share with you all. (acutally, overall, my e-mail has been about 10:1 in favor of no-code, with most of the writers being holders of higher class licenses who see that the time has come for change ... most gratifying.)

This e-mail is typical (of the few pro-code flames I've received) in that the writer flames me for advocating no-code, flames me for being willing to "forget the holy past", and flames me for having the audacity to (in his mind) insult one of the olde fartz's most sacred icons, the QSL card. (You know, those holy wall-hangings which are the measure ot the "True Ham"'s worth ...)

Here's the flame and my response for your amusment and discussion:

On Mon, 14 Oct 1996 10:22:02 +1030, Scott Rosenfeld NF3I wrote:

>Your type is the most dangerous threat to the hobby - someone who
>embraces the future while being completely willing to forget the past.
>Where do you GET this stuff???

First, for the umpteenth time, it's NOT "just a hobby" it's a SERVICE with defined purpose, goals, etc. (defined by the regulators at whose whim we have access to the spectrum, NOT by what we "like to do")

I have never said that we should completely forget the past ... just that we MUST realize when it's time to move on into the future.

Hams have, historically, been, as a group, somewhat reluctant to move forward ... from spark to CW was a battle, from AM to SSB was another, now from CW to more modern modes.

Remember again, I have NEVER said that we should ban the use of CW, nor any other existing mode ... just that we need to eliminate the code test, which is the most antiquated barrier to the entry of new, tehcnically inclined people, and that we should modernize the rules and regs regarding occupid bandwidths, coding, etc. to remove unnecessary regulatory barriers to the implementation of new technology that's already happening all around us and leaving us in the dark ages by comparison.

>
>A true ham need not question the value of the QSL card.
>

Don't give me your "True Ham" crap! I realize that you think I've insulted one of your religious icons (the QSL card) ... all I said was that "collecting wallpaper" is WAY down on the list of "what's truly important in ham radio" (like below emergency communications, public service, serious technical investigations, building better networks, and on , and on ... in fact to the regulators, I'm virtually 100% sure that collecting QSL cards has absolutely ZERO value.

We HAVE to start thinking about what we do and how we act and the image we project to the public and the regulators, and it had better not be the CURRENT image of a bunch of semi-senile olde fartz sitting around banging two pieces of brass together to make di di duh duh noises to say a whole lot of nothing, and telling themselves "Wow, we're GREAT copmmunicators!"

>You need to go and read some more.

You (and those like you) need to wake up, abandon your Luddite mentality and either participate in the future of ham radio or at least get the hell out of its way.

Here's the response I got to my response to the original e-mail, ant my repsonse to that:

n Mon, 14 Oct 1996 12:27:40 +1030, Scott Rosenfeld NF3I wrote:

>I apologize for sounding so harsh, but it's NOT crap. At least much of
>it isn't crap. BTW, I intended to go back and change hobby into service
>before sending it, but by the time I got to the bottom, I'd forgotten to
>do so.

So noted ...

>
>What's wrong with being traditional?

Nothing as long as you're not so rigid and fanatic about it that you can't accept new things or improvements or be tolerant of others who want to do things in more modern ways.

We no-code advocates are NOT trying to force you guys to not use CW or to force you to use/learn/like ANY mode ... you're the ones who insist on forcing others to "do it YOUR way." That's rigid and intolerant.

>Good behavior and a penchant
>AGAINST using profanity on the airwaves are part of a tradition -
>actually, one could say that following the RULES is a part of the
>tradition as well.

I have never, in over 20 years as a ham, used a single profanity on the air. I operate courteously, and take pride in my abilities as an opeartor, including stints as NCS for some VERY busy SOCAL emergency nets during quakes, forest fires, mud slide/flood disasters, etc.

>Look at CB - they have rules, nobody cares about
>them, and nobody gets in trouble.
>

Virtually all of the no-code advocates have stated that they would welcome tougher enforcement of the rules by the FCC ... we don't like the image that the assholes on 14.313 and similar "zoo frequencies" project either ...

(yes I occasionally use the terms "asshole" and "bullshit" on the internet ... but I have NEVER used them on the air ... the internet has a different ethic with regards to profanity, expression, and freedom of speech ...)

>So maybe collecting wallpaper is useless. When someone comes into MY
>shack, or into the U of MD's shack, that is the FIRST thing they notice -
>not the radios, but a wall full of cards from all over the world,
>representing the fact that I, from that room in my house, using a
>simple piece of wire in the attic, have made contact with all of these
>places using nothing more than electricity and wire. It has a strong
>impact.

MY point is BFD ... so you've talked to ### countries with a radio ...
again BFD ... radio communcations have existed for nearly a century now
.. it's old hat ... in the early days, when it was uncommon to talk to
people in foreign countries by ANY means, radio seemed "magical" ...
today, as I type this, I can spawn other tasks and simultaneously
connect this same computer to other computers in a DOZEN other
countries. It's commonplace ... normal, not magical.

We HAVE to get over being so damned impressed with ourselves ... what we
do today WAS magical to many people 30-40 years ago ... its' totally
unimpressive to the computer wiz kid next door today ...

We've allowed ourselves to stagnate in the world of the past and we HAVE
to do some SERIOUS catching up before it's too late.

We have to once again start making some REAL progress in the radio art
.. we have to grow dramatically in numbers ... we have to adopt new
ways to use our spectrum far more efficiently ... we have to build REAL
packet networks that rival the internet in performance and outstrip it
in mobility/flexibility/survivability for use in disaster comunications.

>I do not disagree that
>
>1) We need more in the way of freedom to move into new modes of operation

OK, great ...

>2) We do need to drop the code requirement as CW is useful but CERTAINLY

> license.
>

OK, great ...

>I get a lot of pride out of seeing one of the people I've helped to learn
>the code passing code tests and actually using it.

Fine, nobody's suggesting that you stop teaching the willing ... or that
you stop ejoying it yourself if you do ...

>My wife is a no-code
>Tech and may someday enjoy using Morse, but I doubt it. My sister and
>her husband are also no-code Techs.
>

In my view, there is NO legitimate reason to keep them from full ham
priveleges on all bands/freqs, as long as they are technically competent

and know the necessary rules and regulations. The code is an artificial barrier that has outlived any usefulness it may have once had as a licensing requirement and it must be dropped from that role.

>Carl, remember getting that Novice license and burning up the airwaves at
>7.116 MHz late at night? Remember fighting off the QRM from the
>broadcast stations? Or working DX on 21.105 for the first time? If you
>made a fool of yourself on the Novice bands, that was OK - it was
>expected - it was a "Novice" band.
>

In my view, segregating newcomers with other necomers in the least desirable parts of the bands is counterproductive at its worst.

I hated the novice bands ... and I resented those "higher-class" hams who forced that ordeal on me ... it drove me from HF ... at least on VHF/UHF one had the freedom to not be forced into turn-of-the-century (the LAST century) "technology" ...

The arrogance of hams! I know, have worked with, or have taught, literally hundreds of technical professionals in the radio field over the years who would have made excellent hams ... and they were interested ... until they found out that they'd be forced to jump through the code hoop ... "You've GOT to be kidding?" was the typical response ...

> People call CQ on the calling frequency and don't QSY once contact is
> made.

People also lurk on the calling frequency, just waiting to jump on someone's ass if they don't QSY in less than 100 ms.

>
> People are rude and inconsiderate.

Yeah, so are the "lurkers" above ...

> People carry on QSOs in the middle of the DX windows.

There will always be lids ...nothing, not even the "mighty code filter" can eliminate them all ... in fact, statistically, it appears that the vast majority of people getting fined/revoked by the FCC are extras.

> They can't work crossmode because they can't copy CW.

So what?

>My personal, favorite strange point:

> A no-coder can own & operate a repeater that ID's on CW - and not be
> able to copy their own callsign.

So what, if the hardware's programmed correctly it'll work just fine.

What makes you think this (that majority rules in this hobby)????
Please elaborate for the sake of discussion.

>
>It seems that regardless of the code vs no-code debate,
>MOST HAMS seem to think HF is the place to be and THEY
>want to be there too. This attitude needs to change if
>the hobby is to survive.

Why try to change a realistic attitude? It would be much simpler (and
better) to just let them BE there ... dismantle the caste system and let
all hams use all bands/modes/frequencies on the basis of a meaningful
test of their knowledge of theory, rules, and regulations.

>Radio was not invented just yesterday. Can we get over this
>fascination with DX communication on HF via analog modulation
>methods??

HF and VHF/UHF/uWaves have different characteristics and uses ... they
can all benefit from a big infusion of new operators and new technology.

>Meanwhile the commecrcial world has passed us by and
>is putting even greater distance between us and them with each
>passing day.

This is certainly true ... you can thank our "friends" in Oldington in
large part ... they have consistently held us back from technological

progress and change for at least the two decades that I've been a ham.

>If amateur radio is to survive, it needs to attract
>people whose interests are in the bands and communication techniques
>typical of the 21st century, NOT the early 20th.

I agree with most of what you say, but you seem to think that the HF bands themselves are somehow outdated. That part is untrue ... all that's outdated are the communications techniques being used there. THe bands themselves will always be extremely useful as a vehicle for long-range communications.

>But so long as the incentive system, licenses classes and the
>ARRL (via their contests, awards, certificates and the like) portray
>knowledge of HF, analog and (can you believe it?) CW, as the path
>to respect and recognition in amateur radio, the hobby is doomed.

Agreed, again, than your "friends" in Oldington.

>I am not advocating the elimination of any existing bands or
>modes of operation. I am suggesting changes in the incentive
>system so as to reflect the communications (not just radio) methods
>commonly used today on UHF and above. The bands of the future will
>not be on HF. Amateur radio must realize this or face extinction.

Our HF bands are, and will continue to be, an important resource that we must maintain. The only way we'll keep ANY of our bands (HF/VHF/UHF, etc.) is if we begin to make MUCH better use of them by MUCH larger numbers of hams. And I don't mean more chasing DX, contests, and collecting 10-10 numbers ... I mean BETTER use (in the eyes of the regulators.

>Of course, you need a majority to think this way before anything
>can be changed in this hobby.

This is TOTALLY false ... you've been conned into believing that by listening to years of "It's only a hobby" and similar garbage.

Ham radio is NOT a democracy ... we are RULED by the FCC ... in fact 4 people (the current Commissioners) hold our fate in their hands. They and they ALONE have the ability to protect us or destroy us with the stroke of a pen.

They will exercise that power based on what they percieve the public interest value of ham radio to be. If they see us as a bunch of technically backward olde fartz who insist on pounding brass while the rest of the world is doing advanced spread spectrum networks, and they see our major emphasis such hobby activities as DXing, contesting, and collecting QSL cards, WE WILL SURELY DIE.

>I'll no doubt be royally flamed for this, but if a hobby is set up
>to attract and keep people who think "HF is cool", is it any wonder
>the hobby is so far behind the times technically?

Don't feel like the Lone Ranger ... I get flamed all the time for saying pretty much the same thing. Some of these pro-code people are REALLY dense ... they REALLY don't understand that they will KILL ham radio deader than a doornail if they keep blocking the natural evolution fo progress in technology and practices.

>Amateur radio is little more than "CB with an attitude".
>Few experiment. Few build. Few want to really learn.

Unfortunately, you're dead right ... I've been saying that (in essence), but it falls on deaf ears ... to the Luddites amongst us, they're "God's gift to commmunications" ...they think they're "SO advanced because they can actually make contact with someone on the other side of the world with CW" ... they've been passed by so far and so fast that they can't even see the tail-lights any more, let alone figure out what the truck is carrying.

If the government wants to enforce a "work ethic" as a requirement
for licensing, then the government has every right to do so. For
instance, many have advocated that welfare recipients be made to work
in order to receive benefits. If the government should mandate
"workfare", it would indeed be a relevant "work ethic" requirement
for receiving welfare. If the government mandates a "work ethic" for
ham radio, it is indeed a relevant "work ethic" requirement.

> The current system sucks ... it has created an "upper class" of

More petty jealousy and class envy. Note that these are Carl's opinions
only, and should not be counted as anything more. I strongly dispute his
assertion that ham radio has been "stagnating". Where's the proof? Ham
radio is as vibrant and alive as ever, perhaps more so.

One other thing.. re batteries- I currently have a 7.2V 600 mAh battery, (Yaesu) and a 7.2V 1200 mAh battery (aftermarket). My charger is a simple Yaesu wall charger rated 13v 45 mA.

Q: I was told that this charger cannot charge a 12V battery pack- is this true?

Q: Math seems to indicate that this charger, at a maximum current of 45 mils, would take at least 14 hours (probably more like 16) to charge the 600 mAh pack, and twice that for the larger pack. Is this correct?

How long should the packs be charged for?

Is it ok to leave them connected longer? Is it ok to run the ht with the charger connected?

Last but not least, does Yaesu use the same batteries and chargers for their new radios (ie if I buy more batteries and/or a drop-in charger will my investment be a good one)?

Thanks very much!
Ben Mehlman KB2ERP

Unfortunately, the omnibus budget bill recently signed into law contained
a reallocation of our 2300-2305 MHz band, to be sold to the highest bidder.
FCC and ARRL were not consulted.

I have set up a web page with more information. Please see
http://www.hams.com/Defense, and pass the information in that web page
to your local Amateur club, and to any Amateurs you speak with.

If you are unable to access the web, please send mail to Defense@Hams.com .
A copy of the Frequency Defense Bulletin will be forwarded to you.

Many Thanks

I found a toll free phone number to request any license form directly
from the FCC. The form you need for GMRS is form 574.

The phone # is: 1(800)418-3676

This is an automated (voice mail) system.

If you have a FAX machine the system can fax it directly to you.

I am also going to GMRS (called them this afternoon for form 574)

Hope this helps!

>So the orgin could have been indirect through the English theater to
>the American theater to amateur radio.
>
>73, Cecil, W6RCA, OOTC (not speaking for my employer)

Maybe, Cecil, but ham actor doesn't generally mean amateur actor.
It usually means a particular sort of egotistical actor who overplays
his part, not because he doesn't know any better, but because he
wants to hog the limelight, draw attention to himself, and increase
his self-importance. Such actors are often referred to by their peers
as "that insufferable ham." A great actor is so good that you can't
tell he is acting. He makes you forget there's an actor up there on
stage and makes you believe the character he is portraying is up there
on stage. The ham actor wants to make darn sure you realize it is *him*
up there on that stage chewing the scenery.

Now that may fit some radio hams we know, but I don't think it
is the origin of the term. If it wasn't originally an acronym,
I think it more likely came from the telegrapher's lexicon of
"ham fisted", meaning inept operator, in the same fashion as
"lid" came from telegraphers because the inept operator would
hook a tobacco can lid to the sounder to aid him in reading the
clicks.

>universally recognized as the most important metric in amateur radio. In
>commercial radio there's no question that throughput is of the utmost
>import - or more to the point, dollars/min "throughput".

That's true, information has value, so value/min is a metric of interest. In amateur radio, we aren't allowed to use dollars as the measure of the value of the information we convey, but the information has a value to us nonetheless. And we'd like to maximize that value. We want to do that for our individual contacts, but if we attempt to do it just for our individual information transfers we are being selfish. Ideally, we want to enhance the aggregate value of all information transfers occurring on our amateur bands. So naive value/min has to include some sharing factor, and that factor is typically effective occupied bandwidth. (Note that's not neceessarily the same as naive rectangular occupied bandwidth.)

>It seems to me that there's enough room in the art of ham radio for a lot
>of metrics. Everyone seems to have some particular aspect of their
>station performance metric they take pride in optimizing and maximizing.
>For some, it may be bits/sec.

Bits/sec is a partial metric. As a selfish measure it may be sufficient, but when viewed as an aggregate measure of amateur activity we need to also include the effective occupied bandwidth. Thus we're back to bits/sec/Hz. Modern digital methods excel at this metric.

>For others it is miles/watt,

This is another useful metric, and not only for our selfish purposes. Maximizing it saves on our power bill, but also in an aggregate sense maximizing it is beneficial because reducing power means less interference for everyone. Again modern digital methods excel at this metric (the Lowfers are a prime example here).

>or words/min,

This is the same thing as bits/sec, and the same line of reasoning applies.

>or QSO's/min,

This is a useless metric without qualifiers. We need some content to communicate, and this doesn't quantify that. Obviously, if we reduce content to zero, we can arbitrarily increase this measure to any limit we like. When we add content to the metric, even such minimal content as call sign and the standard 599 signal report exchange, we're back to bits/sec/Hz.

>or square ft. of aluminum-Hz.

Now that's an odd metric. It would appear to be one we'd want to minimize rather than maximize. In this day of restrictive antenna covenants, that can make sense. This is very similar to the miles/watt metric since it is really miles/ERP that matters in either case. But the two measures are generally in opposition, IE low power usually works better with big antennas, and little antennas usually work better with high power. If we use coding gain, however, we can reduce both without penalty to throughput.

>For me, it's QSO-min/dollar
>or QSO-miles/dollar, hi hi. (My wife seems to think that food, shelter,
>clothing, transportation, and security should come before ham radio gear.)
>So I'm forced to try to produce maximum effectiveness for minimum
>investment. It's a fun challenge. This is supposed to be fun after all,
>isn't it?

Indeed. We can generally reduce the cost of the transmitter, and more importantly the cost of the receiver, by use of strong digital codes. Since we can generally sharply reduce power and/or antenna size without sacrificing throughput, this is an economical choice. The digital bits we must add generally cost less than the more expensive analog RF parts we can eliminate.

For the rates used at HF, the PC you're already using to participate on the net can serve dual duty to also generate and decode the strong codings of which I speak (see Karn's latest freeware). The most dramatic improvements (achieable with I/Q receiver design) may require some dedicated DSP hardware, but that's also become cheap. Karn argues that a PC with a sound card is already sufficient to negate the need for special purpose digital hardware. I'm not so sure of that, but disagreeing with Karn on these matters is often a mistake.

Marconi established the fact in 1901 that trans-Atlantic contact
was possible, and quickly proceeded to make such contacts commercially
viable. By the start of WWI, radio was in widespread commercial use.
It was no longer a matter of whether contact was possible, but rather
of what could be done with it. Amateur stations were often the equal,
if not the superior, to commercial stations of the era. Amateurs
also demonstrated that contact was possible very early on, and
formed the American Radio *Relay* League to exploit those contacts
for the passage of real messages among themselves.

Well, if the sole purpose for which we're granted valuable spectrum
were for it to serve as a pastime, I might agree with you. But there's
already a hobby HF radio service, in the 27 MHz band. And it entertains
far more "skip shooters" than amateur radio.

>> Well, I was very involved with the Mexican earthquake communications.
>> I didn't hear much contest style operating (though unfortunately I
>> did hear some). The fellows who were best prepared for that were

>
>What do you mean by contest-style operating?

Total lack of communications discipline, pile ups, rude behavior,
a "me first" attitude, etc. Contests are about competition, but
emergency communications is about *cooperation*. That's why I
consider contesting so harmful. It fosters competition rather
than the cooperation and channel discipline needed for effective
passing of vital information.

>> Yes, good operating skills are vital, but the skills required are
>> not those of the contester. They are the skills of the public
>> service communicator. And those skills are different from those

>the heading information of radiograms.
>
>The best scenario is to have real emergency communications training.
>But I strongely disagree that good contest operating skills can not
>make for a better emergency communicator.

It's a matter of attitude. Contesting fosters a "me first and
devil take the hindmost" attitude. That's exactly the worst
attitude for emergency communications. Contesting revolves around
maximizing the number of contacts a station can achieve compared
to the number which other stations achieve. The content of the
contact doesn't matter, all that matters is the score rung up.

Emergency communications revolves around getting everyone's
message content delivered promptly and accurately in a properly
prioritized manner. That requires tight channel discipline and
a willingness to cooperate rather than to compete. When is the
last time you heard a contest operator offer to relay the contact
information of another station? Not only would it not be allowed
under contest rules, but if it were it would hurt his own
competitive position. Yet that is exactly what a traffic handler
would automatically do.

As the twig is bent, so grows the tree. I would suggest that
it is very hard to switch mental gears and ignore contest
conditioned responses and adopt traffic handling responses
in an emergency communications situation.

5099. 2305-2310 MHz Amateur Band to be SOLD!

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-14 00:00:00 UTC
From: Perens@Hams.com
Message-ID: <53uj7l$s39@samba.rahul.net>

Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc,rec.radio.amateur.policy

Unfortunately, the omnibus budget bill recently signed into law contained
a reallocation of our 2305-2310 MHz band, to be sold to the highest bidder.
FCC and ARRL were not consulted.

I have set up a web page with more information. Please see
http://www.hams.com/Defense, and pass the information in that web page
to your local Amateur club, and to any Amateurs you speak with.

If you are unable to access the web, please send mail to Defense@Hams.com .
A copy of the Frequency Defense Bulletin will be forwarded to you.

Many Thanks

Bruce Perens AB6YM

Oh yeah... I forgot one... The "most hams learn homebrewing by building =
morse equipment" claim... I'm probably still living in the past... I =
know many homebrewers that learned by building morse equipment. *Maybe* =
what I meant was that morse equipment is the simplest to build, nothing =
too fancy... AND you can build it from scratch, and not necessarily from =
a kit. As far as the "outdated mode" claims... lemme see if i can come =
up with a realistic scenario... OK. Suppose you are camping with a =
friend. You are out in the wild, your friend is critically hurt, and =
your batteries are dead, or your radio is broken. {I'm doing my best, =
hang with me...} You have a whistle... you can send morse code on that =
whistle... or a mirror... you can signal a plane... What I am trying to =
say is that morse code can be sent with practically anything. (ever =
tried to signal Clover on a whistle?) And I AGAIN stand by my claim =
that morse is the most readable mode under QRM. A good op can copy =
morse when SSB couldn't make it through... And since one of the main =
purposes of ham radio is to provide emergency communications, morse is =
only a natural choice.

I have a Yaesu FT-708 R, which I brought home to the USA from Germany. Unfortunately, on the front panel, the labeling for the three switches below the keypad has fallen off, and I wonder, what these switches might be good for.

I also would need to come by to an operations manual for this rig.

Thank you for any response in this respect

Siegfried (KB2YVC, DC/KB2YVC, DE8FGO)

Contests are one of my favorite aspects of ham radio, but I can sympathize with those who don't like them. It seems like every weekend, there is some sort of contest or state QSO party going on.

This activity has certainly grown since I first became a ham in the mid-60s. Back then, we pretty much dismissed the complainers, wondering why they couldn't get through one day, or an occasional weekend, without getting on the air.

Hello,

I have a friend of mine in Peru who has no access to the Internet.
However, he is interested in ham radio and asked me to find out
about the prices and other pertinent information about the following
four pieces of equipment

YAESU FT-890AT Compact HF Transceiver
YAESU FT-840 Compact HF Transceiver

KENWOOD TS-140S HF Transceiver
KENWOOD TS-50S Super Compact HF Transceiver

Do you know how much these transceivers cost?
Are these transceivers still available?
Do you know where I can purchase them?
Which is the best transceiver?
How big are they?
How much do these transceivers weigh?

Any and all information is greatly appreciated.

Thanks!

Hi all.

I just got a used Yaesu FT-530- first 'fancy' HT I've had and it's not quite obvious how to work it. Any help (direct information, pointers to web pages, etc) would be greatly appreciated!

Here's what I have figured out so far (I think- please correct!):

-'Band' controls which band you transmit on and which band (some???) settings will affect.
-'F' by itself puts you in direct entry mode?
- When you aren't in direct entry mode, the blue legends apply.
- 'Tone' selects 'no-pl', 'TX only pl', 'RX and TX pl'.
- 'T Set' selects the pl frequency.
- Holding down arrow keys causes radio to seek.
- 'Set' maps the other keys to a mode where other strange parameters are set.
- 'Rpt' enables standard TX offsets.
- 'Clock' displays and sets the clock.

With this knowledge, I have been able to get the radio manually set up to a local 2M repreater, set a -600 offset, set my transmit PL to the proper frequency, and successfully communicate. But I'm constantly struggling with strange modes and settings!

What I need to know now is (besides everything)-

How do I save and recall memories?
What does 'A, b, and C' do?
Can I scan memories? How?
How do I switch the dial between VFO type operation and memory select mode?
What does the VFO button do?
What is 'Rev'?
What is 'Sub' and 'Sub Op'?
What does 'Alt' do?
Are the memories separate for each band? Or, if I program #1 for a 2m configuration and #2 for a 70cm configuration, will the band selected for transmit change with it?
If I'm only interested (usually) in working one band at a time, can I mute/shut off the other band without playing with the volume and squelch?
Can the above be done under memory control?

Also, besides the extended receive and transmit (which I have figured out), what other tricks does this thing do?

I know there are a lot of questions here- I do plan to get a manual but would like to be able to do the basics now.

If anyone has this radio (I know it's fairly common), and you are willing, I would be willing to give you a call on the telephone if you could lead me through the basic logic of the controls. Once I have that I can play with it and learn the rest...

Thanks very much!
Ben Mehlman KB2ERP

: recomendations for a first radio?
: Any feed-back would be appreceated.

I'm entirely happy with my HTX-202 and, in fact, bought the HTX-404 for 70 cm, as a result of overall satisfaction with the 202.

My only complaint is that it has only 12 memories, which puts it at somewhat of a disadvantage here in SoCal.

I don't recommend extended warranties; they're a big ripoff. But, you have to factor in your own situation in making that decision. My feeling is that, at the discounted price I paid ($189.95) during a sale, if it worked for a year that was fine; anything more is gravy. If it failed, it would give me an opportunity to buy a dual-bander, such as the FT-51R.

Left Switch Keyboard Lock off-on
Center Switch Scan Mode busy - none - clear
Right Switch Frequency Step 5KHz - 10KHz

This info is for the US version, Yaesu may have made some changes
to the switch function for the European version. You might want to
check with Yaesu parts ... a few years ago I was able to purchase
the missing placcard for less than a dollar. If they still have
stocks of that part, you might be able to get it for a similar price.

The 208 & 708 are very rugged and well designed.

Good Luck ...

>
>P.S. I heard the tail end of a news report about a 1500 foot tower
>falling down over the weekend. Does anybody know the full story?

Yeah, it was in a suburb of Dallas. Apparently a crane was blown
over by a wind gust and severed a guy wire. The tower then buckled
and fell, carrying some workers up top down with it. This is always
a concern with a guyed tower. The workers had apparently discussed
stopping work for the day due to the wind, but decided to press
on. This turned out to be a terminally stupid decision.

Hams can draw two important lessons from this, protect your guys,
and quit work if the wind picks up more than you like. You can
bet I'm not going to be on a tower when it is windy enough to
blow over a construction crane if I can help it. I did get caught
on a 1,000 footer once by a sudden thunderstorm. Whee! That's
an experience I never want again.

Your idea of "small" solder drop and mine seem to be a bit different. :-)
For the tiny parts and boards, I use a hot air source (Weller Pyropen Jr)
and solder paste. No muss, no fuss.

Good job on the IC-735 repair though. I've had an optical shaft
encoder fail too, on a IC-745. I took the easy route and installed
a replacement rather than try to rebuild the old one. I've rebuilt
dozens of Vamco tape timers, though, because replacements aren't
available. That's a nasty little optical encoder.

The CW only segments are, however, at frequencies where a code test
is not required, IE 50.0-50.1 MHz and 144.0-144.1 MHz are the only
sub-bands where only CW is allowed to be used.

> It says "knowledge" not ability. Therefore, the test could
>be as simple as some dumb questions like

No, S25 doesn't say that. It says applicants are to demonstrate that
they can correctly send by hand and receive by ear texts in the
International Code. Note that the US is already in non-compliance
with the treaty by no longer requiring an applicant to demonstrate
that he can send by hand. And the FCC will allow applicants to take
the test without receiving by ear too, IE accomodations for the deaf.
I have no objection to either practice, but they do technically
place the US in violation of the treaty language.

Fortunately, I took my tests before the FCC stopped adhering to
the treaty, so I'm ITU legal. You fellows who took a receiving only
test aren't ITU legal amateurs when you operate below 30 MHz.

>as it should.

It has to do more than just act as a bandpass filter. The primary purpose of the output network is to transform the load impedance to what the transistor wants to see. Your symptom may indicate that it isn't doing this job properly.

I assume the final transistor isn't getting hot with RF drive removed. Check this if you haven't by disabling the driver and placing the unit in transmit (terminated with a known non-reactive dummy load). If the final still gets hot, you've got a bias problem, or the final stage is breaking into parasitic oscillation. If the latter is the case, double check your layout, make sure the chip emitter bypass cap is located correctly, etc. You may have to resort to parasitic chokes (ferrite beads) to tame it.

But assuming that isn't the problem, you need to check to make sure the final network is doing the proper impedance transformation. Very crudely, we can assume that the output impedance the transistor wants to see is Vce^2/(2*Po). For 12 volt operation and a 10 watt output power, that yields 6.5 ohms as the desired impedance. That means the output network has to transform the 50 ohm impedance of the load down to the 6.5 ohms the transistor needs to see. That's a transformation ratio of about 7.7:1.

That takes care of the resistive portion of the impedance. The transistor will also have a collector-emitter capacitance which has

to be tuned out by the output network. This capacitance is usually absorbed into the output network either by reducing the value of the input shunt capacitor of the network by the amount of the CE capacitance, or by increasing the series inductance of the network to resonate it out. This complicates measuring the transformation ratio of the output network because this capacitance varies under load and figuring out what its value will be at a certain output power is a bit tricky to do generically. Consulting the transistor manufacturer's S22 data is likely to get you close enough.

Ok, once you've calculated the needed resistive value and deduced the correct capacitance value, remove the transistor from the circuit and place the resistance and capacitance values you got across the collector and emitter pads of the circuit board. Now use a SWR meter looking back into the network from the output connector, and drive it with a signal source. If the output network is tuned correctly, you should see a SWR close to 1:1. If you don't, then there is something wrong with the output network (or you've figured the required output resistance and capacitance of the transistor incorrectly.) Note, if you have access to a network analyzer, just use that instead of the SWR meter and signal source.

What I've found with Ramsey kits is that the network tuning has been grossly off from the required value when you wind the inductor as instructed. I've had to add or remove a turn and/or stretch or compress the coil to get the network to yield the proper transformation ratio. I expect that this may be your problem.

They started in NH and expanded to MA.
Known as ESS/Electronic Planet/Electronic Surplus Services in Manchester,NH.
Granite St exit in off 293N. Right at lights,
right at next lights, right again into parking lot.

> That's a shame. I wanted to buy more stuff from them for a 'mad scientist'-
> style art installation. They had a ton of omnious looking meters/gauges/etc.

You won't find any of that at the Woburn and Nashua stores. They are trying to
be a retail outlet at these stores and are selling a lot of new low quality
china-made computer peripheral stuff, old, used, computers and a small
selection of some new, imported electronic parts (mostly GC switches). Your
best bet for older surplus parts and a bigger selection is to go to the
Manchester NH store.....

JOTA 96 INFORMATION and INTERNET in the FIELD!

Worcester Explorer Post 73, an amateur radio explorer post, will operate its radio station, KB1BUF, in the field at Treasure Valley, Paxton, Mass. Field set up will include 10 through 80 meter stations. A 2 meter packet station providing internet access from switch.worcester will also be installed.

Post members will operate without commercial power but will be provided with elecrical power from gasoline powered generators.

TECHNICAL INFORMATION:

HF STATION

Callsign: KB1BUF
Transceiver: Swan 350 or Icom IC-730
Antenna: 3 Element Beam for 10, 15, and 20 meters
1/2 wavelength Dipole for 40 and 80 meters
Operational Hours: October 19, 2pm local - October 20, 4pm local

REMOTE IP STATION

Station Callsign: KB1BUF
Internet Address: KB1BUF.AMPR.ORG.
IP NUMBER: 44.56.12.215
Transmitter RF PWR: 25 Watts
Antenna: 3 Element Yagi
Direction: East Towards Worcester
Operational Hours: October 19, 8AM - October 20, 12PM ET.
Connection Protos: TELNET TTY AX25/KB1BUF-2
CONVERSE ch/773 SMTP: KB1BUF@SWITCH.WORCESTER.AMPR.ORG

JOTA Site: BSA Reservation Treasure Valley, Paxton Massachusetts.
Aprox 10-12 miles west of Switch.Worcester.Ampr.Org.

If you would like more information, please contact:

Brian Arsenault, N1FIY ---- n1fiy@switch.worcester.ampr.org

> theory, and still pass the over-all total of at
> least 70% score .
> What do you think of this idea ?

It is not alltogether a bad proposal, but I think the FCC/ITU is correct in handling it separately. This is because while the theory/regs rules changes from time to time, and from country to country, the code is a constant and is (right now) consider a core part of the amateur service.

Perhaps a better way to test for code would be having several written test questions about the morse code. No sending or reciving test would be involved:

Q1. What is the dot-dash pattern for the morse letter Y ?
1. di-da-da-da 2. da-dit 3. da-di-da-da 4. da-da-di-da

Another variant which probably would also serve, and not be as drastic a step as the one above would be a tape played, which has a ham radio callsign, or a three leter random group. The question would be:

[Tape is sending the morse letters GBN over and over for 30 or 60 seconds at, say, 5 wpm....or 13....or 20....etc.]

Q1. The three morse code letter sequence being played in the tape is: (1) WVA (2) GVA (3) KBA (4) GBN

[This question would allow the use of four tapes with one question, with the answer keyed to the tape].

This would probably smell better to the purists.... is simple, DOES require a measure of ability, etc. Recall your novice days when callsigns, RST and QTH had to be repeated five or six times to get it right? Same idea.

From: "Douglas A. Hamilton" <hamilton@bix.com>
Message-ID: <01bbbad6$ac5a7e40$0f02000a@hamilton>
Source record: 214725

Thanks, Gary, for taking the time to respond to my question about how much height really matters in locating my 2m/440 and scanner antennas. Your comments here in rec.radio.amateur.* are always very helpful and I know I'm not the only one who appreciates your sage advice.

Based on your comments, sounds like I might just try and see if having these antennas mounted on short masts does what I want but that I'm probably not going to be happy unless I can get them up higher.

Now a second question, if you don't mind. Another fellow responded by picking out that I'd mentioned I was mounting my R7 on a 10' section of 1.5" EMT sunk in concrete and was quite emphatic that this was not likely to hold up. EMT is too thin-walled and the galvanization too thin for this material to last in the alkaline concrete. Now, I do want things to last, but I'd also like to get the job done without turning it into a public works project. I'm 45 and I don't expect to be here forever, either. If I have to replace it, say, every 15 years, I probably have to do it once while I'm still here on the planet. OTOH, if it's going to need to be replaced every 3 years, that's another matter.

Comments?

Height definitely does matter at VHF+. And the first 30 feet is
usually the most critical amount. That gets the antenna above most
local clutter. I've often seen figures tossed around about
"height gain". One rule of thumb which seems widespread is 10 db
for each 10 feet up to the first 30 feet. If that rule of thumb holds
(and obviously each location is different), then you'll have 1000 times
more signal at 30 feet than at ground level. That's significant.

"Height gain" continues to increase as you go higher, but not at
nearly so sharp a rate. At some point, feedline loss becomes greater
than the additional "height gain", and going higher doesn't buy you
anything (unless you remote mount a preamp and power amp to get around
the feedline loss).

I use "height gain" in quotes because it isn't really a gain in antenna performance, rather it is a reduction in path loss due to getting up above ground clutter. I'd urge you to get your antennas as high as you practically can. It *does* make a significant difference.

On the subject of house brackets, you want to use lag screws and screw them into the wall studs, not just the sheathing. As you concluded, screwing into just the sheathing isn't very secure at all. If you had a high windload, such as if you were using a tower instead of just a pipe, you'd want additional internal bracing in the attic to spread the load beyond a single pair of studs. But with EMT and the antennas you propose, that won't be necessary. The EMT will bend before the lag screws will pull out of the studs.

Now if you still don't want to tie to the house (and that can cause wind resonance noises in the house), you know that you can couple multiple sections of EMT together with EMT couplings don't you? You really should guy each section if you do that though. EMT is kind of flimsy as a mast, but you aren't putting much load on it. Better would be line pipe. This comes in 20 foot lengths and uses screw together couplers. A couple of lengths of 2.5 inch line pipe would get you up 37.5 feet, and you could support a tri-bander on that if you guy it at the joint and near the top. You need riggers and a crane truck to install it and work on it though.

I do something different at the farm. I have a section of 2.5 inch line pipe (0.25 inch wall thickness), set in a 2'x2'x5' block of concrete. That leaves 15 feet sticking up. Near the top and at 5 feet above the ground I have 1 inch holes drilled through the pipe. I have another 20 foot section of the pipe with a hole drilled at the bottom and 10 feet up. This bolts to the other pipe with long 1 inch bolts. That gives me a 25 foot high mast which will pivot over if I remove the bottom bolt (I've got another hole and an eyebolt at the bottom of this pipe to attach a rope). I use a coupler at the top to attach a section of 2 inch well tubing, and put the rotator and antennas on top of that with a 10 foot section of TV mast. That gives me a 55 foot tilt over tower. I've used it with small VHF antennas with no guys, but if you want to put up an array, you should guy it. To maintain balance, you can fill the bottom of the first hinged section with cement, but I've found I can manage it without the ballast if the array up top isn't too large.

This has been up about 15 years now, and has withstood wind storms with 70 MPH gusts. I inspect the bolts periodically, and replace them if they show excess wear. The beauty of this setup is that you can install it by yourself, and you can service the antennas without taking a step off the ground.

The only climbing you ever have to do is to go up the 15 feet to inspect the top bolt. An ordinary extension ladder leaned against the pipes will let you do that. (I cheat and use a tractor with a front end loader to get me up there.)

A PE would probably have fits about this design, but it has worked well for me for years. I would caution you to orient the holes in the standing pipe so that if a bolt should fail, the other pipe will fall in a direction where it won't do any harm, IE don't orient it so it could fall on your house or car. I built this because I had access to free oilfield pipe. If you have to buy the pipe retail, it might be cheaper to put up Rohn 20 instead.

If I were doing this over, I'd use bushings made of 1 inch water pipe instead of depending on the bolts for bearing surfaces. That would mean redrilling all the holes in my present installation to 1.25 inch, and doing that to the top hole wouldn't be easy, so I just keep an eye on the bolts. I've only had to replace them once. Don't forget to use a couple of flat washers between the pipes or they won't pivot.

Gary

Special Bulletin 18 ARLX018
From ARRL Headquarters
Newington CT October 15, 1996
To all radio amateurs

SB SPCL ARL ARLX018
ARLX018 Oldest LW transmitter

The world's only working Alexanderson alternator will broadcast this month from Sweden on 17.2 kHz. A nostalgic Morse code transmission at 0900 UTC on October 23 from station SAQ in Grimeton on Sweden's west coast will commemorate the declaration of the radio station as an historic building. The RCA Alexanderson alternator was built in 1924. The SAQ site, complete with six antenna towers and the 200 kW transmitter, are under the care and management of Telia Mobitel, a Swedish mobile telephone company, and the radio museum of the Radio Historical Society of West Sweden, which operates club station SK6RM. Ulf Sjoden, SM6CVE, has helped to organize the event.

SAQ also will transmit a test on October 21, at approximately 1100 UTC. SAQ requests listener reports of both the test and the commemorative message via telephone at 46-340-74251 or fax at 46-340-74195. Callers will be reimbursed for the cost of the call. The operator at SAQ is Bengt Dugaas, who is not a ham.

The Alexanderson alternator was developed during the early years of wireless by Ernst Alexanderson, a Swedish-American. The device is essentially a large, electromechanical high-frequency alternator with a high-speed rotor that's connected directly to an antenna system. A similar station once operated on Long Island. The circuit was used to transmit telegrams and messages between Europe and the US.

Last fall, Amateur Radio station 7S6SAQ operated from the SAQ site to celebrate 100 years of radio and the 70th anniversary of the radio station (see ''Up Front,'' QST, Nov 95 , p 14, for a picture of the Alexanderson alternator and the antenna system). During September 1995, SAQ itself transmitted a message to England which was relayed via landline from a BBC monitoring station to those attending a ''100 Years of Radio'' conference in London.

-->Last but not least, does Yaesu use the same batteries and chargers for their
-->new radios (ie if I buy more batteries and/or a drop-in charger will my
-->investment be a good one)?
-->

The answer to this question is that the batteries for the newer radios like the 51 and the 50 are completely different. The fast charger is also different, and you buy adapters for the newer different battery packs.

I think they break even on the rigs and make the big bucks on the batteries, chargers, speaker mics etc..... Yeasu even has different AC adapters for each different battery pack voltage so if you do go the cheap slow route, you'll need multiple wall warts also!

Now that the dollar is work 112.25 yen (last check), I wonder if the prices will go down on the Japanese radios. Remember how they blamed the last price increases on the exchange rate when it got into the low 80s, upper 70s? Now the dollar is worth 25% more yen than back then.

Hmmm. Let me get this straight. Burt's wife (must be a saint) HATES HAMS, Burt's daughter HATES HAMS, think ya might be in a little trouble there, Burt. As far as turning in her license, I think there is no problem doing that, just tear it in two and mail it in. While your at it, beat the rush, save the postage, and toss yours in too.
regards - Jim

> - Xochi--

Great. More government bullshit, to coddle us and protect us from ourselves. And then we won't have flea markets at all anymore! Or any other place to take a chance, and get a good price in exchange for the risk.

This 'wanting of someone else to be responsible' really frightens me. It's becoming so pervasive in our society. People need to get back to being willing to be responsible for the results of their own decisions.

You go to a flea market. You see something you think is a good deal. YOU have to decide whether its value to you at that price is worth the risk that it might not work.

It's a -flea market- for god's sake! It's not Sears. It's -supposed- to be full of junk that might not work, but is cheap enough to take a chance on. That's the fun part!

If you require that a vendor be willing to take back non-working gear, then make that clear to him up-front. If he'll give you a written warranty that it works, then you have an ethical and legal recourse if it doesn't.

If he's unwilling to give such a warranty, then -you- are responsible for walking away from the deal, or deciding to take a chance on it. He has done nothing wrong by refusing such a warranty.

There are many reasons he may not want to give a warranty, which have nothing to do with his ethics. Maybe he feels that at the price he's getting, he can't afford the time to mess with warranties, returns, paperwork, etc.. That's reasonable. If you don't agree, you don't have to buy it!

I know I feel that way when I sell an old 'scope for, say, $35. A warranty? For $35? Are you kidding me? For $350, maybe... But for $35, I never want to see it again.

Having said all that, I do appreciate when sellers state their knowledge of the condition on a tag (or in a newsgroup posting), even if it's just 'don't know, haven't tested it'. Any info at all helps the decision making process.

I found out that they moved to a small storefront in Cumings Park (around
the corner) but only sell new computer stuff there. Two stores away from
another similar store, near Comp USA (or whatever that big store on
Washington
St. is). They still sell surplus stuff in their NH store, but it is a haul
to get
there.

Probably for the best, as their prices were getting stratospheric and
selection
dwindling.

I moved to NY a couple of years ago but still visit the area once and a
while.
Any new places?

Oh, yes, try checking out Parker Products in Reading, not far away. He has
lots of solar stuff and a few old buildings full of JUNK. Mostly he likes
to do
mail order but if you talk nice he will let you scrounge around. Really
worth
it... some weird stuff like fiber optic image plates, raw pure silicon
chunks,
strange test equipment. Bring a good flashlight!!

I think CW is a cool way of communicating! It's exciting to work a guy QRP CW and trying out new antennas to see which one works best. All in all, this hobby offers something for everyone, but get use to the CW now because it's here until at least 1999.

Roger,

I agree with you from my own obeservations in the past ... contests are
sort of like personal watercraft (jet-skis) ...

I lived for 5 years on a 42 foot cruising sailboat, and it never ceased
to amaze me how a jet-ski could transform what appeared to be otherwise
normal, reasonably considerate, reasonably intelligent people into
idiotic, flaming assholes. Contests, unfortunately have the same effect
on some (not all, but some) people.

I just bought (a few weeks ago) a Yaesu FT-50R that I'm quite pleased
with. I especially like being able to program it with a PC. It has a
very sensitive receiver and really neat features. Whatever you get,
get the speaker mic. you'll appreciate that, especially if you are
going to use it in the car with external antenna and DC power from the
cig lighter. Also, if you can afford it, get the rapid charger - I
never had one before, but it's well worth the $, it's great to get a
full charge in an hour. I also have a Alinco DJ-580T (now the 582)
which has been a good and reliable ht, but I will now sell to help pay
for a mobile rig, now that I've got the Yaesu.

Good luck on getting your ticket.

Regards, Bob Good, AE4XG

5149. How to build a 800MHz Yagi?

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-15 00:00:00 UTC
From: dvmclhk <dvmclhk@hk.super.net>
Message-ID: <3264003B.2B1C@hk.super.net>
Source record: 214742

Hi,

I wish to build a 830MHz 6 element data transmission YAGI myself.

Can anyone tell me how to build one. It would be nice if someone

can supply me with the specification of such Yagi (e.g. the

element position from rear of boom, element length.....e.t.c.).

Is there anything special about the driven element of 800MHz

Yagi? Do we build them the same way as building a 2 Meters

band Yagi?

Thank you

Mr R Ho (AK)

That's nice. How many of these are in use in the amateur bands? How
many are available in commerically-available ham gear?

> the same way the big commercial outfits do.

Maybe I should have rephrased that. Rather than, "Why should
we care?", how about, "Why should it be favored by the amateur
radio incentive system?"

What is the big deal about intercontinent!!?? Why go applying
the same old "DX mentality" to digital, networked data?

What if I just want to build a very local SS multimedia network among
friends in town and add wireless net access right into my home
LINUX box (that has an ISDN line into the internet)? Will amateur
radio let me do that at high speeds using DS SS and a reasonable
chip code? No. Will amateur radio let us toy with the kind of
multimedia, portable, wireless units the pro-future telecomm marketing
types can still only dream about? No. Yet this is EXACTLY the kind of
experimentation on UHF and up that will save our bands from the commercial
giants. Sorry, but CW moonbounce aint gonna do it.

Now I know all about requesting "special operating permission" from
the FCC. But SS has been done time and again in the commercial
and military world. We don't need to show proof of concept.
Open the bands and let us DO IT. Let us implement some real
systems, not just some kludge illustrating the basics.

No, Gary, I am NOT against HF. I am against an emphasis on it.
And our incentive system does just that.

>Our networks are sparse,
> we can't afford to setup a microwave relay site every 30 miles or lay

I have a feeling amateur radio would be very very surprised at what it
could do if it put as much time and effort into building such a network
as it does contesting, collecting QSL cards and testing for Morse code
proficiency. I have a feeling amateur radio would be very surpised
at what it could do if it gave as much priority and tower space to local
RF TCP/IP nodes as they to do analog repeater antennas. I have a feeling
amateur radio would be very surprised at what it could do if it's members
started thinking cooperative, RF networks instead of mostly big, fat,

expensive HF rigs, towers and amps. This "lone RF outpost in the
wilderness" mentality is killing us.

> underground fiber, and we can't afford to lay submarine cables either.

Why do we have to JUMP from doing virtually nothing to duplicating
the world's telecommunications infrastructure? Is there no middle
ground? I guess while some people see possibilities, others only
see problems.

> We have satellites, but their capacity is limited, and since they are

> financially out of our reach, and likely will remain out of our reach
> for a long time to come. That leaves HF as our only long haul alternative.
> It is equivalent to about $100 million in geosync satellite capacity.

I never asked to eliminate HF. I was talking about a bass-ackwards
incentive system that thumbs it's nose at 21st century communication
methods.

> Our VHF+ spectrum is very valuable, and growing more so daily, but
> it can't substitute for HF when we need long haul communications.

Yeah, yeah, yeah. We have plenty of expertise in long haul analog
on HF. Why must every new mode that comes out be held up against
analog, HF, DX?? Nobody is suggesting we build Gigabyte/sec networks
across the atlantic. The high-speed digital mutimedia RF fun can be
had right in your own back yard and within your immediate community.

Sometimes I feel that rather than expertise, what the members of
this hobby really lack is imagination.

> Most activity at VHF+ faces only an AGWN environment, and that's

> interesting.

I prefer UHF and up. Gee...PCS, GSM, IS95 and IS54 are not challenging?
Smaller amateur versions of the same would be trivial to implement?
Well I guess I better get on HF and learn something REALLY cool. ;->

If you think this, then you are merely presumptuous. Anyone who buys
something at a flea and expects it to work at home is a fool. To
obtain true "slack" you must NOT be a fool!! The trick is to pay
little enough for it that it is worth no more than its parts, and
where your intelligence and carefully acquired talent can either use
those parts for FAR more than their used cost, or even make it
function again!! If there were not idiots who drive the prices up with
their gullibility, then the prices would remain at that fair "slack"
value of only their exchange cost. Better to *impose* a basic intelligence
quotient in the used value of old electronics on all who come to buy
than limit what can be sold!! Should be a BIG SIGN up saying:
****
* "Items that don't work when you get home are entirely your fault *
* for being stupid enough to pay more for them than they are worth *
* if they were a pile of working and non-working parts on a table! *
* Your stupidity drives up prices on everyone else! If you want to *
* come here stupid then have enough sense to ask opinions of value *
* from people around you but don't believe anything you hear also! *
* IN THIS LIFE, YOU ARE ON YOUR OWN!!! DON'T PISS AND MOAN! THINK! *
****
(Oh, by the way, Xochi Zen, I like your sig!! ;->)

: From: hbcsc274@huey.csun.edu (jerry wang)
: Subject: Help: RFI with TV

: I just installed a 2-meter 5/8 wave vertical mag mount antenna on top of
: the air conditioner on the roof. My radio is a Radio Shack HTX 212
: mobile used as a base station. Whenever I transmit on any 2 meter
: frequency, channel 18 goes out
: on all of my tv's. The tv's are hooked up to cable, and not antennas.
: My neighbor's who also has cable has channel 18 go out when I transmit as
: well. My minimum transmit power is 10 watts on the HTX 212.
: Even at low power, channel 18 goes out with a bunch of snow on the
: screen. As soon as I let go of the PTT, it's back to normal.
: It only happens on channel 18. How can I fix this?
: Btw, the roof is about 20 feet up.
: Any help is appreciated.

: jerry - ke6uux

Jerry,

Well, technically, you probably can't. As best I remember (CATV guys
help me out here), the frequencies used by cable tv are:

82-88 ch. 6
88-108 FM radio (untouched)
108-118 Aircraft aids to navigation (Noone dares to touch!)
118-124 ch 14
124-130 15
130-136 16
136-142 17
142-148 18

In other words, your cable company is allowing your two meter energy to
leak into its system. Call the cable provider (or have the neighbor do
it) and ask them for help: most likely, someone ran a 'free' extension
using twin lead. Good luck.

No ... more like "If you get all of the other questions right, but fail
to recognize one single sign, should you be denied your license."

The eye test relates directly to safety of operation, the CW test DOES
NOT.

Another mindless strawman from the pro-code side bites the dust.

only, and should not be counted as anything more. I strongly dispute his assertion that ham radio has been "stagnating". Where's the proof? Ham radio is as vibrant and alive as ever, perhaps more so.

You might want to look at the statistics showing how the hams are getting older and older and there are not nearly enough young ones to enter the hobby. In Finland, the average ham age in the last 4 years has increased by 3 years. That means pretty clearly that young men and women are not entering the hobby. Guess what happens when the large post-war generations get old within the next 15 to 20 years or so.

Hmmmm..... in this case the most moderate and sensitive answer to those
former FCC employees would be: HAR HAR! CRAWL INTO THAT BREADLINE YOU
PARASITES! AHAHAHAHAHAHAHAHAHAAAAA! I'M BUILDING A TRASMITTER IN MY
GARAGE THAT WILL GIVE SATAN AN RF BURN! THEY'RE GONNA HEAR ME JAMMING
HORTON HEAT IN *ASGARD!!* IM GOING TO BROADCAST OPININONS SO LUDICROUS
BIASED AND IRRESPONSIBLE THAT RUSH LIMBAUGH AND HOWARD STERN WILL END IT

ALL IN A CRYPTO-GOOFUS SUICIDE PACT!

ahem Sorry, I guess getting my first Ramsey catalog has made me a bit
uhh..... enthusiastic.

If we can draw the line against the industrial machine in
America, and make it hold, then perhaps in the decades to
come we can gradually force industrialization underground,
where it belongs, and restore to all citizens of our nation
their rightful heritage of breatheable air, drinkable water,
open space, family farm agriculture, a truly democratic
political economy. Why settle for less? -Edward Abbey

5168. Where to mount 2m/440 and scanner antennas?

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-15 00:00:00 UTC
From: "Douglas A. Hamilton" <hamilton@bix.com>
Message-ID: <01bbba38$d6e6b780$0f02000a@hamilton>
Source record: 214777

I just picked up a 2m/70cm vertical (9 ft long) and a discone scanner antenna at the Boxboro ham convention a week or so ago and have been thinking over how I'd like to install them.

First thought was a couple masts mounted off the side of my house with brackets, using 1 1/4" EMT (metal tube) as the mast material.

But as I think about it, I'm wondering if that's such a hot idea. I admit I'm not crazy about drill holes in the siding to do the mounts (especially considering some concern that with only lap cedar siding and the underlying pressboard sheathing to screw into, I'm not even sure how much load you can put there). Also, if I put both antennas there, it really is going to look kind of cluttered with ham junk, I admit.

So now I'm wondering whether I might not be better off mounting these two new antennas the same way I'm doing my R7 HF antenna: on a 1 1/2" EMT mast sunk in concrete in the back yard. The EMT tube is 10 feet; after sinking it in the ground, there's still around 7 1/2" above ground.

Obviously height does matter. I'm not trying to ask a silly question. But how much difference (for each) and do I really care. For 2m/440, let's face it: I'm not thinking DX, just going into the various repeaters in the greater Boston area. If I'm not full-quieting, the heck with it, I'll go to a different repeater to ragchew. (Who wants to talk on a repeater with someone you can barely copy?) On the other hand, if the difference in height between a mast on the ground vs. near the top the house is going make a difference hitting Boston from Sudbury (about 20 miles) with 50W, that would be a consideration.

With the scanner, I have even less sense of how much difference to expect or what I might listen to. Realistically, it's probably just the local police and fire, though. :-) Again, almost certainly it's not DX unless it's a question of whether Boston is DX one way versus the other. Btw, the scanner is an Icom 7100 I picked up through rec.radio.swap and have had sitting around waiting for me to hook up an antenna.

Any suggestions would be appreciated.

Oops, wrong deadline. The deadline for submitting the application
is such-and-such date; the rule states that the business had to
be divested of PRIOR to submitting the application. If he sent in
the application a month before the deadline, then the business would
have to be sold a month prior to the deadline.

Seems clear to me.

>believe everyone would be a lot happier.

>MD

VERY well put. I myself am planning on giving it a try, but I sure
don't think it should fill every band. I also do not accept the "go
to a WARC band" argument. MANY of the older radios do no have the
WARC bands.

*** !!!! WE ARE BACK IN THE GARAGE !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
October 20th, 1996
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

>
>Commonplace, yes, and nothing new. But this is Amatuer RADIO, not Amateur
>COMPUTER we are discussing, remember ? Hams are the 'wires in the tree' bunch,
>not the WAN bunch......

BZZZZZTTTT! WRONG ANSWER! ... everywhere ELSE in the world there is a
major convergence between computers and commmunications EXCEPT in ham
radio ... the rest of the world ALREADY KNOWS where technology is going.
Perhaps in 20-30 years you and your buddies will figure it out. THE
REST OF US ARE NOT GOING TO HANG AROUND WAITING FOR YOU ANY MORE.

If ham radio is not at the forefront of technology, it's NOT meeting its
purpose under Part 97.1 and we will surely (lose our bands and) die.

There's nothing wrong with "wires in the tree" ... but they should be
considered (at least partly) to be part of a WAN, not an isolated voice
in the ether ...

>I can talk to anyone in the world with my cell phone,
>but I save those discussions for the Amateur Cellphone newsgroup.

Stop bringing up cellphones ... I'm not talking about cellphones ... I'm
talking about the future of ham radio ... I already know that you and
your cronies want things to continue to stay the way they were in 1954,
but it ain't going to happen.

>>We HAVE to get over being so damned impressed with ourselves ... what we
>>do today WAS magical to many people 30-40 years ago ... its' totally
>>unimpressive to the computer wiz kid next door today ...
>
>Carl, think about something for a minute. If the above is true, and talking to
>someone in another country isn't going to impress your 'computer wiz kid' next
>door, is talking to someone three blocks down the street on packet going to
>impress him ?

Having a voice conversation with someone in Zimbabwae (sp?) is NOT a big deal ... having him be part of your world-wide wireless network and being able to talk, type, and send documents, pictures, video, and computer files back and forth simultaneously WITHOUT WIRES is NEAT. Yeah, the wiz kid will be impressed an he'll like that ... in the majority of cases ... because the wiz kid ACCEPTS new technology and can appreciate the value in it ... unlike you and your CW cronies.

>Maybe radio won't impress him at all, maybe he is better off
>playing with the internet ?

Ham radio theoretically IS PART of the internet ever heard of the <ampr.org> domain??? Right now its' utility and functionality are hamstrung by stupid limitations on interconnections, unattended message forwarding, content, and so forth ... that is changing and it will change more. Ham radio can, in the future, provide the ultimate in survivability for the internet in the case of disaster. No, not carrying the full load of the net to everywhere, but by providing connectivity to disaster areas when the shit has hit the fan and everthing else is out.

>I have seen, in several different threads, a new message coming from your side
>of the fence, and it contains a basic contradiction. What I am seeing is HF is
>useless, 'BFD' as you put it. If you have decided that HF communications are
>'old hat', then you seemed to have solved your own problem.

I NEVER said that HF was useless ... I said that many of the techniques that hams use on HF are so backward as to be practically useless in today's world (that's why EVERY other service has already abandoned CW, for example).

I have, rather, said that we would begin in the near future to see a regrowth of pressure on HF as commercial and government users return from their earlier flight to the "panacea" of satellites, having realized that there's still a lot of good communicating to be done on HF .. if one uses modern techniques.

>Sounds to me like you are not impressed by radio communications.

Not at all ... I am quite impressed with what can be done by intelligently using modern technology to communicate via radio. Unfortunately, the ham community does not, for the most part, do that. You and your cronies insist on clinging to turn of the century "technology" and cringe at the thought of things that have become commonplace in under-$200-consumer-items (i.e. they're no longer "bleeding edge")

>Instead of trying to turn ham
>radio into a computer club, maybe you should just grab the kid next door and go
>find a computer club the two of you can join ?

I'm not "trying to turn ham radio into a computer club" ... I'm trying to drag in into (at least the 20-1/2th, if not the) 21st century so that it will survive into the future instead of being discarded by the regulators for the stagnant, outdated, waste of spectrum it has become

over the past 30 years or so ...

>If HF (this week) is 'BFD', 'old hat', etc., then WHY the big push to
>Get >eveyone on it ?
>
>I really can't figure out what your agenda is anymore.

I (and Gary and Len and numerous others) have enumerated it many times.
I can only come to the conclusion that you're not only unwilling to, but
also completely incapable of, understanding the point.

[snipped some incoherenet drivel]
>
>What's the program for next month, so we can get a jump on studying the
>concepts ?

I give up, Jim. (on trying to get the point across to *you*, that is,
NOT on the cause) I don't believe you're sincere ... you just want to
wrestle with someone here on USENET ... if I went away, you'd latch onto
someone else with some other issue ... I'm sure they're all the same to
you ... just someone to joust with ...

Sorry, but I'm not going to play with you any more, Jim. There are too
many people who are willing to discuss the issues seriously and who are
willing to at least consider the possibility that modernization is a
Good Thing ... so why waste my typing energy and time on you?

Bye,

Because that would be new and modern and he can't understand how it would work or the benefits it could provide. And those things didn't exist in 1954 when the "technology freeze" went into effect. That's why. Plain and simple. :-)

>who does this and not contesting itself.

This is where I, and I believe others, part company with you. Fact is, this sort of behavior occurs mainly during contesting, and is one of the hallmarks of contesting. Individuals who don't do this kind of stuff any other time for whatever reason seem to feel free to do it during contesting. I guess that is because the contest actually rewards this kind of behavior with a higher score.

Contesting, in other words, actually incents this sort of bad behavior. That is why so much of it is committed by contesters.

> What makes you think this (that majority rules in this hobby)????
> Please elaborate for the sake of discussion.

What I read in QST. What I hear on the air. What I hear from
the ARRL. What I hear at club meetings. In amateur radio, the
majority rules and wants to "yack" long distances on HF using
analog techniques.

The boring looks on the faces of maybe 90% of the people at a club
meeting in which I demonstrated spread spectrum, discussed digital
cellular radio and illustrated digital modulation techniques using
equipment as eye-opening as a $25,000 spectrum analyzer. Hell, half
those over 60 were sleeping! All these people know is analog.

Despite their arguments about CW being so very efficient (in some
ways I agree), few seemed to have any real grasp of side-bands, spectral
efficiency or even the most simple time-domain vs frequency-domain
concepts. Information theory and computer networking?? Forget it!
They are from another era and they enjoy what they have. They will
not change. That's just the way it is. I'll probably be the same
way when I get old.

The majority does rule. They set the tone that attacts certain
people to this hobby and deteremines the direction it will take.
As things are now, the status quo will remain for a long time.
The majority will get what they want and deserve: HF and little more.

I really believe that by the time enough people get into this hobby
to change it, the bands of importance (70 cm and up) will be virtually
gone from the amateur radio service.

> I agree with most of what you say, but you seem to think that the HF
> bands themselves are somehow outdated.

I am very much in favor of experimentation with new modes on HF. I'd
LOVE to research, build and operate an adaptive frequency hopper for HF.
We are not allowed to experiment like that. CW and SSB rule. The few
narrow-band digital modes don't offer a whole lot.

> Our HF bands are, and will continue to be, an important resource that we
> must maintain.

Yes. But I believe UHF and up is a greater resource in an age of
wireless networking. And let's not forget AMSAT.

> This is TOTALLY false ... you've been conned into believing that by
> listening to years of "It's only a hobby" and similar garbage.

I do some experimentation on my own. I'm fortunate to have access to some RF cages and facilities where I can legally play around with digital modes on 900 MHz and up. But the whole FCC policy on amateur spread spectum and experimentation is behind the times.

Actually, based on rececnt band auctions, these bands are damned valuable to the FEDS. Much money is to be made. Think they are going to ENCOURAGE digital amateur radio!? They then would have even more difficulty taking away our bands. Sorry if that sounds like a big conspiracy theory, but hey, money talks.

> Ham radio is NOT a democracy ... we are RULED by the FCC

I think I just said that. ;-)

5185. Ham TCP/IP and FreeSCO

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-15 00:00:00 UTC
From: bw@cs.ecok.edu
Message-ID: <54070b$888@cs3.ecok.EDU>
Source record: 214794
Cross-posted to: comp.unix.sco.misc,rec.radio.amateur.misc

This may be of some interest to the c.u.sco.misc folks who are also
ham operators, so I am cross-posting to comp.unix.sco.misc and
to rec.radio.amateur.misc.

I am now running a rather dated version of K5JB's (SK last month, RIP)
version of KA9Q tcp/ip. This system has done yeoman work for several
years under my older SCO 3.2.4 system, and works equally well on my FreeSCO box.
It was easy to compile, and provides a way to get on packet radio with
TCP/IP.

I am now looking for yet other unix-based ham radio TCP/IP systems to host on my
fancy new FreeSCO box.

Anyone have something running? (tnos, maybe ? --- I can't seem to make
it work yet).

The ARRL publishes the Net Directory annually. It only costs $3.00. I keep one handy for ready reference in the shack and for HF mobile ops.

In article <3261A15D.7530@mail.mei.com> Kevin Jessup <kevin.jessup@mail.mei.com> writes:
>CW or not, what is the big deal about HF?? Why should we care?

It is the poor man's submarine cable or geosync satellite relay.
Amateurs can't afford to do continental or intercontinental networking
the same way the big commercial outfits do. Our networks are sparse,
we can't afford to setup a microwave relay site every 30 miles or lay
underground fiber, and we can't afford to lay submarine cables either.
We have satellites, but their capacity is limited, and since they are
low orbit, latency and availability are unsatisfactory. Geosync remains
financially out of our reach, and likely will remain out of our reach
for a long time to come. That leaves HF as our only long haul alternative.
It is equivalent to about $100 million in geosync satellite capacity.

Our VHF+ spectrum is very valuable, and growing more so daily, but
it can't substitute for HF when we need long haul communications.
Most activity at VHF+ faces only an AGWN environment, and that's
the easiest one to master. So VHF+ doesn't offer the challenge to
the developer that HF offers. HF is a far from benign environment,
and strongly challenges us to design equipment that can deal with
its rigors while still maintaining good throughput. That makes it
interesting.

Is this the one where cantankerous old men sell stuff that their
wives have been begging them to get rid of? One thing that I've found
is that *some* of the dealers there sell stuff that doesn't work and
refuse to take anything back. A better bet for old electronics gear
is probably the Electronics Superstore (in Waltham... or is it Woburn?).
They'll refund your money if you buy something from them and find that it
doesn't work when you get it home.

I'd like to see the dealers at the MIT flea market be held to this sort of
policy. If people don't have ethical standards, I say *impose* some on
them.

<===== Expand your screen to its maximum size for best viewing =====>

S I G N A T U R E F O N T S
Turn your signature into a TrueType font and say good-bye to cutting and pasting or importing from outside files forever.

Now you can access your signature right from your font menu. It's easy and it's fast. In the past you had to import a previously drawn or scanned graphic that not only used a tremendous amount of space and time to display but it also took forever to print.

Well, not anymore. With the Victory Press "Signature" Font, you just click on your font menu for your signature and presto! Your selection appears in a snap as a TrueType font in your document, fully scaleable to any size.

Here is what David from San Jose had to say about the Victory Press Signature font... "Thank you for the quality job that you have done. Also, I found the installation and use of the font to be explained in such a way that even a novice, such as myself, was able to accomplish it successfully."

John from West Haven, CT says... "I just wanted to let you know that I received the signature font and it works just fine. Thank you very much for your very kind attention to the needs of this customer."

Gregg the "Shirtsleeves Accountant" says... "I installed the new font and it works like a charm. Thank you for the help."

Signature Fonts are priced at only $28.95 per signature.

==========
O R D E R F O R M [form #H10146]
==========

SIGNATURE INSTRUCTIONS - Following these instructions will produce the best possible results. Use a black "Uni-ball" pen. This pen produces the best results. Practice writing yoursignature on a plain white sheet of paper, pressing firmly to get a dark, consistent signature. When finished practicing, please include the paper with your order and indicating which signature you like the best by pointing to it with an arrow. Be careful not to touch your signature with the arrow or any other marks.

Y E S: Please send me my signature as a TrueType font. I understand that if my signature does not work to my satisfaction, I may return everything for a full refund.

That's a shame. I wanted to buy more stuff from them for a 'mad scientist'-
style art installation. They had a ton of omnious looking meters/gauges/etc.

I'd still like to put some analog meters on my Linux box for things like
# of users and server load. But I know next to nothing about interfacing
electronic devices to a PC.

It'd be great to have the 'tripwire' program trigger a revolving red-light
on the top of the server for any suspected security breaches.

I submit that the FCC and the FCC alone RULES ... they will listen to
ORGANIZED, well-founded arguments for change ... the BIGGEST problem is
that so far, most of their input has been a snow-job from the ARRL,
saying "We represent ham radio and this is what ham radio wants."

Until we organize effective opposition to their line of
backward-thinking stagnation-prone bullshit, that's what we'll get.

>The boring looks on the faces of maybe 90% of the people at a club

The rules CAN be changed ... if we organize an effective lobbying group
to represent our interests to the FCC ... hell, what WE want to do is

FAR more in line with Part 97.1 than the brass-pounding, DXing, contesting, 10-10 number collecting drivel that the olde fartz insist onperpetuating like it was something to be proud of (geez ... it makes me sick to think that people can be so set in their ways and backward)

>> Our HF bands are, and will continue to be, an important resource that we

Contact the ARRL and ask them for info on obtaining a license in Japan
and Austrailia. The League maintains files on most countries and can
supply forms and information.

I vacationed in Japan for a month in 1993 and the license (7J1AOE call)
cost about $95 for one year; less per year for subsequent renewals.
The exchange rate has changed so I GUESS the price to be about $125.
BTW, this was the most expensive foreign license I have obtained.

That extended warranty will replace as many Nicad batteries as
you wish for all five years of the warranty. And the standard
battery is good for only about nine months! Good way to get
free batteries when they otherwise cost $40.

Source record: 214560

The suggestion in an earlier post of a movie starring Burt Fisher sounds interesting, we could have the handsome dashing Burt (played by Tom Cruise) as the resident 'savant' professor at an Ivy League university. By day Burt pushes the limits of known science in instructing his students in the rarefied esoterics of holding a video camera and rewinding a VHS cassette, Burt REALLY pushes the limits of science when he attempts to instruct his underlings on how to correctly set the digital clock on a VCR !!! At the end of the day the dashing Burt jumps into his Dodge Viper and barrels at Nascar speeds on the freeway to his beautiful home in the burbs and his lovely wife Vicky (Demi Moore), there Burt hurries through dinner and makes his way to the computer and fires up on the net to save the hapless denizens of rec.radio.amateur.misc and alt.support.divorce. Meanwhile Vicky (Demi Moore) carries on a HOT STEAMY affair with a local Walmart "associate"(Tom Hanks) who gives her what she's really been desiring from Burt but he never has time for (lots of sex). The movie ends on a tragic note when Burt sees a picture of Vicky (Demi Moore) and her Walmart lover(Tom Hanks) in a compromising position in alt.binaries.pictures.girfriend and commits suicide by grabbing the B+ line in his SB-220 !!

Whaddya think ????

Siegfried,

According to the Instruction Manual FT-708R (Model A, B, X),
the text of keys look as below:

KEY -MAN- STEP
| |
> LOCK CLEAR BUSY > X2

They have the following functions:

KEY
The switch will disable the buttons of the keyboard. When the
keyboard is in the "LOCK" mode (pushed to the right), the letter
"L" will be shown on the LCD display.

BUSY-MAN-CLEAR
This switch selects the STOP mode of the scanner.

STEP
This switch selects the desired synthesizer step. When this
switch is set to the X2 position, pushed to the right, 50 kHz
steps are programmed. When not in the X2 position, 25 kHz steps
are programmed.

I have the Instruction Manual, contact me if you want a copy.

5207. TV60 QSO Party

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-16 00:00:00 UTC
From: Chris Packman <Chris@xdinet.demon.co.uk>
Message-ID: <19961016.114511.32@xdinet.demon.co.uk>
Source record: 214566

On the 2nd November 1936 the BBC started the world's first regular high definition television service from Alexandra Palace in North London. The Ariel Radio Group is celebrating this by holding a QSO party on the HF bands over the weekend of the 2nd / 3rd November 1996. Anyone involved in any aspect of broadcasting (ie, TV, radio, cable, satellite,facilities houses and support companies) is encouraged to take part. We hope that during this event a station from the group will be active using our special call for this year GB60BBC, possibly from Alexandra Palace.

This is not a contest but participants are invited to submit logs showing date, time, station worked and broadcast affiliation of station worked (ie: BBC, Granada, C4, NHK, ABC, Sony etc.) a certificate will be awarded to anyone sending in an entry. Entries may be sent either by mail to: Brian Bower, 19 Chapel Road, Flackwell Heath, High Wycombe, Bucks. HP10 9AB or by e-mail to qsop@xdinet.demon.co.uk to arrive by January 1st 1997

The QSO party will start at 00:01 UTC on 2nd November and finish at 23:59 UTC on 3rd November, call CQ TV60 to attract attention. Suggested centres of activity are 3.72Mhz, 7.06Mhz, 14.18Mhz, 18.16Mhz, 21.38Mhz, 24.96Mhz, 28.38Mhz on SSB and 3.53Mhz, 7.03Mhz, 10.135Mhz, 14.055Mhz, 18.075Mhz, 21.075Mhz, 24.905Mhz and 28.075Mhz on CW.

Information about the Ariel Radio Group, newsletters and details of the current GB60BBC operation are available from the group's web site at:- http://www.xdinet.demon.co.uk/ARG/

>Great. More government bullshit, to coddle us and protect us from ourselves.
>And then we won't have flea markets at all anymore! Or any other place to

I'd say there's a big difference between someone selling a plate for 50 cents
and someone selling testing equipment for ~$100. And who said anything about
the government? Not I. 'Twas you, knee-jerk boy.

>This 'wanting of someone else to be responsible' really frightens me. It's
>becoming so pervasive in our society. People need to get back to being
>willing to be responsible for the results of their own decisions.

Hoo boy... If I've triggered some latent derangement in you, then I
apologize to the readers of ne.general.

>It's a -flea market- for god's sake! It's not Sears. It's -supposed- to be

Again, we're not talking about 50 cent plates or $1 answering machines.
For my own part, I've simply decided not to give any of these vendors
my business. I think your neo-cortex needs calibrating if you think anyone
is calling for the government to intervene.

>Having said all that, I do appreciate when sellers state their knowledge of
>the condition on a tag (or in a newsgroup posting), even if it's just 'don't
>know, haven't tested it'. Any info at all helps the decision making process.

That's all I ask. In lieu of a blanket return policy...

This was truly one of the more entertaining posts I've read.

a.) ethical standards at a flea? That would certainly take the fun out of
it!!

b.) How do you intend to *impose* your ethical standards on anybody?

c.) I haven't found a flea yet that you couldn't find 120VAC SOMEWHERE, If
your spending more than a hundred dollars or so test it out before you buy.

Dear all,

I would appreciate any info about the novice license being offered in the UK right now. Is there some web page where I can check out the details or even speak to someone via e-mail who is officially involved with the process of licensing. The reason is that I have been interested in radio for ages but not quite up to the full license stuff. I live here in Prague but as a British citizen I must still qualify for a UK call. I thought maybe it is possible to study via correspondance or something similar.

Any info is really appreciated. 2m activity here in Prague is well alive !

E-mail replies preferred if possible !

Please! Allow me! :-))) ....

If we can draw the line against the no-code machine in
America, and make it hold, then perhaps in the decades to
come we can gradually force newer modulation methods underground,
where they belong, and restore to all citizens of our nation
their rightful heritage of analog, low data rates, QRN,
the vagueries of the ionosphere, a mail-box full of postcards,
donuts, hemorhoids, truth, justice and the ARRL way.
Why settle for less?

OK, I think I misunderstood what you were trying to say. I thought you
were
trying to state that it was a well known fact that Amateurs as a group
collectively decided that making contacts was old hat and that some more
serious communicating needed to be done. I could not think of how you

could come to that conclusion.

I think that Amateur and commerical stations were often on equal terms back
then because the technology was so crude that it was realtively easy and inexpensive to build decent equipment (note I did not say it was inexpensive). I think the dollar ratio between state-of-the-art and affordable is much larger today than it was at the very beginning of radio. So I don't suspect Amateur Radio will be challenging the commercial
services in all technological phases, even after the code test is dropped.

Ummm.... unless they've changed the rules concerning CB it is not an "HF" service, even if it is located on the HF bands. The rules for CB used to specifically forbid international contacts and any QSO over a certain limit (can't remember how many miles). Many other countries did not have this limit and of course many US CB'ers never paid attention
to the rule anyway!

Also note that nowhere in part 97 does it state that one can not have any fun and that every moment must be spent in public service. So I fail
to see where someone having fun with Amateur Radio is such a bad thing.

Cooperation? You can't count on that, contests or not. Being able to effectively communicate in a contest environment can help one become a better emergency operator, IMHO, because it builds up skills for operating in a less than perfect environment. When I talk about contesting skills being applied to emergency operations, I'm not talking about a bunch of people trying to fight to become the net control station. Rather I'm talking about operators who know how to exchange information under adverse conditions.

In an emergency situation you can't always count on good conditions or cooperative Amateurs sharing the band. Due to power outages the signal strength may be low, so being able to copy weak signals in adverse conditions can be of help. Pactor you say? Sure, that would work great and should be used when possible. But this is an emergency and that mode might not be available so having some other skills is a benefit.

> Emergency communications revolves around getting everyone's
> message content delivered promptly and accurately in a properly

> under contest rules, but if it were it would hurt his own
> competitive position. Yet that is exactly what a traffic handler
> would automatically do.

Yes, relaying exchange information is not allowed because the point is trying to make contact with the other station directly. Because of this there is encouragement to build better stations.

> As the twig is bent, so grows the tree. I would suggest that
> it is very hard to switch mental gears and ignore contest
> conditioned responses and adopt traffic handling responses
> in an emergency communications situation.

I disagree strongly with that statement Gary. I've operated contests and have also provided public service communications (a non-emergency form of emergency communications I guess you could say). When providing communications I keep my mouth shut until I have something important to state or the net control op asks a question. And don't think I'm the only one who can do this.

I'm sure that you do not mean to imply this Carl but it almost sounds
like you advocate the removal of all modes of communication except
computer. Packet is one of my favorite modes and I am working to get
higher speed packet here is Austin but I would never make a claim that
other modes (SSB, FM and even CW) are somehow worthless and should be
done away with. To me, they are *all* fun and each provides a learning
experience as well.

Exchanging email and files via radio with people around the world is
also
old hat. It's been done before. I agree 100% that it is NEAT and would
love to do that myself. But I do not for a minute think that Amateurs
doing this are breaking any new ground. What matters to me is that it
is
fun and I get to learn something along the way. But note that I could
do
this (have fun and learn) by making a contact via some voice mode as
well.

I agree 100% here. The current message forwarding rules are slightly
better
than what we had before but I'm not thrilled with them. I hope the
issue is
revisited shortly and that the entire blame for bad messages gets placed
where
it belongs, on the original sender.

BTW, I spoke with a leading packet advocate (I won't name names) and he suggested that in a TCP/IP networked environment there may be a loophole to the "first forwarding" station rule. Since machines in a TCP/IP network can be servers and clients, etc. your very own station is a part of the forwarding network and thus is the first forwarding station. Of course the FCC might not see it that way, but it's a thought.

>along with the latest appliance operator special. I of course exagerate to make a point, but CW, love it or hate it, has been every
>hams baptisim into the realm of hamdom. The No-Code license has forever changed that.

Yeah, it let in all of those data operators who know how to type and set proper line margins. Well, you've succeeded in crashing into the wrong newsgroup and spouting all of the usual reactionary prejudices and common myths about CW. Seems like all of these arguably define you as a LID in the classic sense. So much for CW keeping out the riff-raff.

>We CW dinosaurs, as you no coders think of us, do not complain that you all are not on CW. I love the elbow room I have on all
>CW bands. But I will never agree to eliminate the CW requirement for HF privaliges. It is after all a privalige, which is something that
>must be earned. Maybe CW is not the current "in" mode, and maybe it has been abandoned by other services, but Ham Radio
>started with Code, and when it is eliminated, it will mark the beginning of the end.

"Privilege" seems to be an unfortunate term bandied about by modern-day bureaucrats and statists when they get chafed over "having to" allow people they don't like their rights. It's ironically amusing when it gets brandished as a weapon by the other end of the political spectrum.

Access to the "common heritage of all mankind" (e.g., electromagnetic spectrum) is arguably a right. The role of the state is to moderate access to this common property so that all can exercise their rights equally and fairly (and one person's rights don't impede the rights of others).

A good rejoinder to anyone who insists that such things are only "privileges" is to ask them under what circumstances such privileges can be taken away (consider a driver's license for example). They will say, of course if they commit a crime or endanger public safety, you've forfeited your "privilege." Then ask them how such a determination is made. They will point to some due-process procedure, such as a trial or administrative hearing. It doesn't take anything more than a layman's understanding of law to argue that something that anyone can get, and can only be taken away by due-process, is a right.

The "privilege" codeword is often used to mean "keep out those we don't like or don't agree with." In the past, such a "we reserve the right to

refuse service to anyone" mentality was usually a cover for outright bigotry. The rule of law is not determined by anyone's personal prejudices or desire to put fraternity hazing standards in place.

It's interesting you you use the word "baptism" above. It sounds like you are advocating amateur radio as a religion, and basing its entrance requirements on acceptance of certain religious beliefs. State-supported religions are prohibited by the U.S. Constitution, you know.

For amateur radio, this means fair, objective, and technically relevant standards and exams. Despite the protestations of Vince Biancomano and others, such fair and sensible regulations do not lower standards. In fact, history shows that fair and sensible regulations increase respect for, and compliance with, the law.

You show a disappointingly low regard for the ability of amateur radio to absorb and assimilate newcomers through the use of peer-pressure, leading by example, pride of belonging, and Elmering. These are ultimately what make amateur radio, not CW. Consider the REACT program in CB. Their share many of the same attributes of amateur radio operators, and are model operators as a result, despite their lack of CW training.

>I do encourage everyone who expresses an interest in ham radio, to get their license. I do not want to participate in a hobby that is
>elitist. I want Ham Radio to continue to grow and evolve, but eliminating the CW requirement is not the answer.

You contradict yourself when you say that you want to end elitism, but in the previous paragraph advocate extremely elitist, dictate-from-the-mountain, arbitrary standards to dole out "privileges" to those who you think "deserve" them.

>Unfortunitly, I am sure that in the end CW will loose out. The equiptment manufacturers succeeded in getting the no- code tech
>license created, so that they could sell a lot of radios. The end result is that the no-coders are the largest segment of the ham
>community. This will enevitably lead to the demise of the CW requirement and Ham Radio as we know it. As soon as it is put to a
>vote by the ARRL, what do you think will be the outcome? Let's see you can have all the rights and privilages of HF operation
>without learning the code. What say ye No-Code majority???

>If you think the ARRL is watching out for your interests, think again. They pay the bills with the AD dollars that Kenwood, Yaesu,
>ICOM, etc. spend month after month. They will put the best face possible on this CW debate, but in the end, they will recommend to
>the FCC that CW be eliminated as a requirement for HF licences.

This has been spouted over and over again, but there is no evidence beyond post-hoc fallacy and circumstantial evidence to argue for it. Unless you can prove money, consideration, or influence changing hands, you don't have a case, and it makes you look like a raving paranoid to

try to make one in the absence of evidence.

If I were to speculate, it instead sounds like bad-sport whining when
you know that things won't go your way with the FCC and the ITU.

>I am by the way a member of the ARRL and have been since I was first licenced. They aren't much but at present, they are all we
>have, and I would encourage everyone to join, and vote for CW friendly candidates in EVERY election. The ARRL can be
>changed, but it will take members who are willing to spend the time and let their voice be heard.

Say, for the sake of argument, that the majority of the membership
does want the elimination of the CW requirement. Will you then go
along? In a (supposedly) representative democracy in organizations like
the ARRL, change is effected not only by majority rule (i.e., voting for
candidates), but also by the technical merit of the proposal (causing
elected representatives to vote for them at board meetings). Do you
have both the numbers and the merit of your argument to back it up? I
don't think so.

>Do I sound like an old fart who should just shut up and die? Well maybe so, but I have been licensed for 17 years and at only 31
>years old, I feel like an old timer. I love Ham Radio, and I love CW. If we loose this fight, I am sure we will be religated to 5 or 10
>KC's at the lower end of the bands. Then I guess, All those CW ops who are sitting idly by, will wish they had done something.

Such arguments are usually ended with "how many years" they've been in
the hobby, as if that's necessarily a good thing. Experience can be
valuable, but age and familiarity can breed stubbornness and resistance
to worthwhile change due to fear of the unknown.

And for such a mode that's so robust, that operates in the smallest
amount of bandwidth, and that will "get through when nothing else will,"
there's an amusing amount of protests when CW has to fight for bandspace
and against interference from other modes, like any mode usually has to
do. If CW truly has merit, or at least attracts the interest of a
sufficient minority of hams, it will find a place in the bands (just
like AM phone has done).

>Best 73's and cu on the low end of the bands

>David, KA4IKH

>CW FOREVER!

I prefer the slogan "Amateur Radio Forever!" which is more in keeping
the Basis and Purpose Statement in FCC Part 97.

>
>
>Maybe I should have rephrased that. Rather than, "Why should
>we care?", how about, "Why should it be favored by the amateur
>radio incentive system?"

Why should there *be* an incentive (to pass faster Morse tests)
system? That's a separate issue from whether we should care about
HF. Incentive (to pass faster Morse tests) Licensing was a horrible
mistake when it was imposed, and it still is. But that is about
Morse Code test receiving speeds, not about HF per se. HF access
is just one of the rewards for accomplishing the faster Morse speeds
being incentivized.

>What is the big deal about intercontinent!!?? Why go applying
>the same old "DX mentality" to digital, networked data?

Well, if you want amateur radio to just be a parasitic appendage
to the wired internet, I suppose long haul doesn't matter to you.
But if amateurs are to provide alternative communications to the
commercial wired networks (for emergencies, or just because it
would be interesting to do), then we need those long haul inks.

>What if I just want to build a very local SS multimedia network among
>friends in town and add wireless net access right into my home
>LINUX box (that has an ISDN line into the internet)? Will amateur
>radio let me do that at high speeds using DS SS and a reasonable

>types can still only dream about? No. Yet this is EXACTLY the kind of
>experimentation on UHF and up that will save our bands from the commercial
>giants. Sorry, but CW moonbounce aint gonna do it.

Well you *can* do all that right now. What's stopping you? The
chip codes the FCC allows us to use now are sufficient, unless
we get thousands of amateur stations using them in the same area,
and that's highly unlikely. Sure, it would be *convienent* if we

could just adapt Part 15 devices to Part 97 operation, but where's the experimentation in that? So it isn't *essential* that we be able to use their spreading codes.

Go ahead, build your local DS SS systems at UHF, nothing is stopping you. In fact, because activity is so low, amateurs are so sparsely distributed, and our UHF+ allocations are so large, you don't really need SS at all. You can use point to point narrowband technologies just as well to create your multimedia local networks.

>Now I know all about requesting "special operating permission" from
>the FCC. But SS has been done time and again in the commercial
>and military world. We don't need to show proof of concept.
>Open the bands and let us DO IT. Let us implement some real
>systems, not just some kludge illustrating the basics.

Have you *tried* using the spreading codes we're allowed to use? What's the disadvantage? The fact is that the codes we're allowed to use will support up to 2,048 stations in the same coverage cell without overlap. Do you *really* expect a higher density of amateurs than that in the local cell? Now if we were allowed to use SS on HF, we'd need more spreading codes, because the added range would bring more stations into the "local" cell, but we aren't yet allowed to use SS on HF, and you say you don't care about HF anyway, so what's the problem? Seems to me you're just whining because you can't use a Part 15 appliance in Part 97 service.

>No, Gary, I am NOT against HF. I am against an emphasis on it.
>And our incentive system does just that.

No, our incentive system offers rewards for passing faster Morse Code receiving tests. Some of those rewards happen to be HF access, but that's beside the point. What is being incentivized (literally subsidized) is faster Morse receiving test taking skills. That's ludicrous, of course, but not germane to your complaint about HF.

>>Our networks are sparse,

>started thinking cooperative, RF networks instead of mostly big, fat,
>expensive HF rigs, towers and amps. This "lone RF outpost in the
>wilderness" mentality is killing us.

I'd suggest that if you had *tried* to establish such networks you'd have a better appreciation for just how sparse any amateur network

truly is. Here in Georgia, we've got about 1300 digital operators spread over 30,000 square miles. GRAPES has been working for 8 years to get those operators serviced by a 56 kb network, and it still isn't complete. Covering the entire 4th call area is only a distant dream.

Now think about what would be needed to service the 7th or 0 call areas. There's too damn many square miles, and too damn few amateurs per square mile. Even the cellular boys, who have billions to spend, and the power of eminent domain in some cases, haven't been able to get adequate coverage of much of the US. With amateur resources you're completely mad if you think it can all be done on UHF. There are lots of long hops that need to be made, and UHF won't do them.

A local cell isn't very interesting if it only contains one or two amateurs. They want a bit more variety in who they can contact. That means the network needs to be interconnected on larger and larger scales. I want to be able to exchange packets with stations on the West Coast via an amateur radio network. That's not going to happen purely at UHF. There are too many places between here and there where there's no amateur activity, and the several hundred hops required would have so much latency that roundtrip times would be measured in hours. The hop count needs to be under 16 to retain reasonable latency. The internet achieves that by a mix of short and long haul wired links. We need to do the same thing via radio.

>> underground fiber, and we can't afford to lay submarine cables either.
>
>Why do we have to JUMP from doing virtually nothing to duplicating
>the world's telecommunications infrastructure? Is there no middle
>ground? I guess while some people see possibilities, others only
>see problems.

We've *done* the local cell, we've linked *some* of them together to form partial state networks, we're *working* on completing that. But we have to think about tying it all together into a coherent system. We can't do that at UHF, and we likely won't ever be able to do that at UHF. Even if we could, the latency due to the number of hops involved would kill us. We *must* have a long haul capability if we want to ever expand from being scattered appendages hanging parasitically off the wired internet. If one doesn't consider the problems in the design phase, one will discover them later after too many wrong choices have been made and too much money spent on the wrong solutions for them to ever be corrected.

>> We have satellites, but their capacity is limited, and since they are
>> low orbit, latency and availability are unsatisfactory. Geosync remains
>> financially out of our reach, and likely will remain out of our reach

>> It is equivalent to about $100 million in geosync satellite capacity.
>
>I never asked to eliminate HF. I was talking about a bass-ackwards
>incentive system that thumbs it's nose at 21st century communication

>methods.

Then talk about the methods, and not the bands needed to accomplish
the network. Those are two distinct things. What is being incentivized
is Morse Code. It should be obvious that's useless for a modern network,
or most anything else that requires more than trivial content transfer.

>> Our VHF+ spectrum is very valuable, and growing more so daily, but
>> it can't substitute for HF when we need long haul communications.
>
>Yeah, yeah, yeah. We have plenty of expertise in long haul analog
>on HF. Why must every new mode that comes out be held up against
>analog, HF, DX??

Because it is an old and well established metric. If our new systems
can't do better, then they *aren't* better. (Fortunately, there *are*
better methods we can use. The problem is getting a critical mass to
adopt them.)

>Nobody is suggesting we build Gigabyte/sec networks
>across the atlantic.

Why not? Personally, I think that would be great. I've even got a
few ideas how we might be able to do at least Mb/sec across the
Atlantic, if we could get rid of some antiquated regulations.
Do you?

>The high-speed digital mutimedia RF fun can be
>had right in your own back yard and within your immediate community.

We've already got that, why haven't you? That's practically off the
shelf. I can web browse via a 56 kb link *right now*. Why can't
you? All you have to do is get out there and *do it*. And if 56 kb
isn't fast enough for you, I've got some microwave gear out in the
barn that can do 10 Mb full duplex. That's 20 year old technology.

>Sometimes I feel that rather than expertise, what the members of
>this hobby really lack is imagination.

Sometimes I think what they need is some practical experience with
wireless wide area networks with a sparse topology. It is *very*
different from most commercial wired network experience. Once
you grasp the realities, wrestle with the topographic maps, and
study the demographic distribution of amateurs, *then* you may be
able to productively apply imagination to the problem. As long as
you don't grasp the problem, you never can find a solution.

>> Most activity at VHF+ faces only an AGWN environment, and that's
>> the easiest one to master. So VHF+ doesn't offer the challenge to
>> the developer that HF offers. HF is a far from benign environment,
>> and strongly challenges us to design equipment that can deal with
>> its rigors while still maintaining good throughput. That makes it
>> interesting.

>
>I prefer UHF and up. Gee...PCS, GSM, IS95 and IS54 are not challenging?
>Smaller amateur versions of the same would be trivial to implement?

The RF isn't challenging. Getting the sites and interconnecting the
cells in our sparse topology is what would be challenging. That's
mostly a political, organizational, demographic, and geographical
problem, not a technical problem. I've fought those battles, I
understand those issues, but I don't think you do.

>Well I guess I better get on HF and learn something REALLY cool. ;->

If you are interested in challenging *technical* problems in a hostile
RF environment, you certainly should. There aren't any really challenging
technical issues to solve at UHF. The technical issues of RF networking
are cookbook at UHF. Give me the resources and I'll set up a three nines
network anywhere you like on UHF without developing one new thing.

HF has unique technical challenges to be addressed, as well as offering
some unique solutions to the problems which plague a UHF+ network.
There's the fading multipath channel, the heavy natural QRN, the heavy
manmade QRM, and the erratic nature of the ionosphere to be dealt with.
But there's also the long hop span which reduces hop count and the required
amount of network resources needed to cover the large areas of a sparse
network topology. So those of us interested in the techincal issues of
RF data transmission find it an irresistable challenge to design systems
to deal with those characteristic impairments and exploit those characteristic
strengths.

We've got to watch out that the tail doesn't wag the dog here. Amateur
radio is about radio first, and other things second. Sure, network
protocols, routing issues, etc are interesting, but they don't mean
diddly unless the underlying physical layer is in place and working.
To do that on HF is challenging, but I think it is ultimately necessary
if our amateur data networks are to be more than scattered minor appendages
parasitic to the commercial wired networks.

Are you guys going to the same "flea at MIT" that I go to? Of course everything is "as is" but I've found that even when the guy says, "I have no idea if it works," that it usually (or at least often) does. What do you expect for a song? If it looks like junk, it probably is!

I've picked up power supplies of all types, wideband 100W RF amplifiers, BIRD wattmeter plugins, HV glass capacitors, meters, Tek scope plug-ins, HV probes, DC current probes, bipolar power amplifiers, power resistors, 50-ohm high-power loads, SWR meters, wideband ferrites, 10-turn pots (new by the set of 10 still boxed), variable capacitors, including 5kV types, data books, old books, microwave oscillators and amplifiers, crystals, power transistors, varactors, a 3COM 3C509 ethernet combo card for $25 - worked perfectly - I'm using it now, RF cables and connectors for a song, and one very large scissor-style lever switch (what's a scientific laboratory without one of those?).

Now, anybody seen any HV high-current rotary switches?

I checked some of our cross references and I see an N-Channel JFET with the number J310. The JEDEC package type for this device is TO-92. A TO-92 is a small black plastic package that is flat on one side and with three inline leads. From the top the package looks like the letter D. This FET is listed as a RF, VHF, UHF amplifier device. If that package matches yours then this might be the device you are looking for and it should be listed in most cross reference catalogs under JFETs or FETs.
Hope this helps.

I understand what you say. Firstly we in Canada and in the rest of the world, I suspect, don't pay as much attention to what the FCC has to say about the radio spectrum. In Canada the equivalent Gov't agency the D.O.C. (Department of Communications) has been incorporated into another department of Industry Canada. Even Its role has been deminished.

Don't forget in the States that competition lives much more fiercly than in Canada. Canada has a confederation which has a strong Federal Gov't which dicatates (in between elections) the status quo. Strong lobbiers mean not as much as in the States.

I don't think Amateur Radio can make more significant advances in communications that a well paid multi-billion dollar defence companies. So that's why I treat it as a hobby.

>to be worn with pride.

The same thing (sort of) has happened to the word "hacker". First it was
a somewhat derogatory (in the 1970s) way of referring to programmers who
weren't professionals.
Then in the early 1980s, every new computer user wanted to be called a
"hacker".
More recently, it has been generally used as a name for those who commit
computer crimes.

BTW... a 1933 article about the early days of line-line telegraphy says
that the word "ham" was used as a derogatory name for poor telegraphers,
predating radio.

I tend to think this is the most likely explanation for how the word
"ham" came to be used.

>
> Will it be alive, as we know it, in 10-20 yrs.? Your opinions please.

The way the world is going, will anybody or anything be alive in 10-20 years? Nobody knows, but the way things are going with all of the greed in the world, ham radio is probably the least thing we have to worry about.

I sincerely believe that in this world money talks and it is just a matter of time before the already glutted telecommunications industry actually gains control or even ownership of all of the frequency spectrum. No longer will you be able to have a hobby that allows you to talk to your friends across town or around the world for free. They will most certainly have communications gear available, but they will want to charge you for every minute of communications time, just like they do now with cellular phones.

Hardly a week goes by without something that we used to get for free gets either taxed or charged for. I picture a world with not only pay-per-view television, but pay-per (or for)-EVERYTHING! They are already trying to get us off of a system where you walk into a store and use Federal Reserve Notes to buy things over the counter.

We will all have a money card that has credits or some other monetary unit assigned to it. We will pay for everything and anything that we buy or do with this card. When payday comes around we will have more monetary units wired into our account. When it comes time for payment of taxes, the government will just take it with an electronic exchange of funds.

You want to watch TV? Just swipe the card into the reader on the front or top of the TV and not only will the program you are watching be payed for automatically, but more credits or monetary units will be taken from your card to pay for the electricity that it takes to run the TV and for the sales or excise taxes that will be wired to the government.

You want to talk on ham radio? Swipe the card into the transceiver and it will work for a fixed amount of time, so long as you have enough credits left to pay the telecommunications company who owns the frequency (who bought the frequency from the government through an auction years ago).

Why, you may ask? Because we are letting them get away with it right now! While we are busy worrying about trivial matters such as banning Morse code, running our new car's air-conditioners on environmentally safe refrigerant, and O.J. Simpson, the politicians (that WE have elected) are busy giving this country away to keep their rich friends and campain

donators happy.

This response may sound a little extreme, but it could happen. Think about it!

Steve

I wonder, is that TYPICAL ham thinking? You keep preaching that Hams don't have a life etc. etc. So your licence gives you a voice? To who? The people that you contend don't have a life? BTW: You don't need a license to type messages here or on the Internet. Turn it in. At least someone could say that you stand behind your beliefs then! Right now you're just another whiner with a license.

> You would never ever would want me silenced?

Well written, well stated! (Huh?) What do you teach again?

> My wife and daughter hate TYPICAL hams. I am not that.

Oh! TYPICAL hams! I see! You didn't say that! Why don't you say what you mean? Could it be that you don't really know what you want to say? Since we're on the subject: Why do you contend that everyone is a TYPICAL ham? (Except for you of course!) Is there some committee that we should know about? The one that JUDGES us as TYPICAL hams? Or are you the self-appointed judge? (Let me guess)

> I am happy AND PRODUCTIVE.

You produce alot of whining, contradictions and personal jabs. That's all I've ever seen you produce. Everytime someone pins you down on your like hypocracies, you take a 90 degree turn in the subject. Are you going to do that now?

Interested in microwaves? Operate on frequencies above 1 GHz?

Want to know more about the SHF bands?

Then point your web browser at: http://www.pacsat.demon.co.uk

The European Microwave News is published on a regular basis and is
dedicated to microwave operations across Europe.

The newsletter is available by email subscription or the web.
It carries news, letters of interest, band reports, operating
information, sales and wants and much more.

Its free to everyone by simply accessing the url or
by sending an email to: emn@pacsat.demon.co.uk
with the words 'subscribe' in the text.

The web site also carries much more information about the bands above
1 GHz and is being continuously updated.

Interested?

Send me your subscribe message now and I will send you the latest
issue, or alternatively, point your browser to www.pacsat.demon.co.uk
and download the web version!

>is probably the Electronics Superstore (in Waltham... or is it Woburn?).

The store is in Woburn. If you take 128/95 north, you get off at the
Woburn exit with the Jaguar/Toyota dealer, and loop around to the buildings
on the right by the exit ramp. They have a tall sign that's visible from
the highway.

>They'll refund your money if you buy something from them and find that it
>doesn't work when you get it home.
>I'd like to see the dealers at the MIT flea market be held to this sort of
>policy. If people don't have ethical standards, I say *impose* some on
>them.

I don't think that anyone could or should do anything like this.

If you, as a buyer, don't like the guarantees offered by a particular
seller, take your business elsewhere. I personally wouldn't depend on
verbal guarantees: get a business card and a receipt with a written
guarantee ("guaranteed working" or something). If the seller won't do
this, don't buy.

If you want the lower prices of "as-is, buyer beware" products, and you
have the knowledge to test function before you buy, or can fix afterwards,
enjoy the flea!

>like you advocate the removal of all modes of communication except
>computer.

No, that's not exactly what I'm saying ... what I'm saying is that we NEED to build a REAL network ... and that that network will be able to carry LOTs of different types of traffic and content ... just like the internet carries textual messages (e-mail), "RealAudio", various forms of videoconferencing, internet phone, etc., etc.

We can make much better use of our spectrum with better modulation, coding, and protocols.

>Packet is one of my favorite modes and I am working to get
>higher speed packet here is Austin

I hope you've set your sights at 64kbps or better for user links ...

>but I would never make a claim that

>done away with. To me, they are *all* fun and each provides a learning
>experience as well.

I have never said "get rid of" or "ban the use of" CW or any other mode .. what I have said is that there are better ways to do the same things and we should be inventing, developing, and adopting them, NOT insisting that we MUST remain in the past ...

I hear you ... we need to be careful not to stretch loopholes too far,
or we may get an unwanted knee-jerk reaction in the opposite direction.
I'd prefer to see us make the case for change and get the change in
place in an above-board fashion.

I love CW also but what's in a QSO anymore that warrants using it ? Does anyone really care what the wx is like in some other city, how old the other guy is, what kind of rig he's running ? Do you really care that the other guy has bunnions or hemmoroids or is a retired janitor ? I don't think anyone does so why bother with ham radio at all anymore ? It will probably be a dead hobby within the next 10 years or they'll just open it up for anyone who wants to use it. CW *and* Phone QSO's in general suck and are meaningless tribble. Thank god for the "NET" !

Burt's right about one thing though, contestors are PIGS as are dx'ers

And your point is?????

It SOUNDS like your point is "If we're not *already* using it and it's not *already* being mass-produced, we can't even *consider* using it.

So, in YOUR world view, there IS no future, there CANNOT POSSIBLY be any progress, and we CERTAINLY shouldn't even CONSIDER trying for anything better ...

Why don't you just go run a nice warm bath, climb in, and slit your wrists???? You'd accomplish the same thing .... a bled-out, do nothing, no-hope, no future, future ... without having to wait around ...

I really do pity the students you've referred to ... to be saddled with a teacher with such total lack of vision and imagination must be VERY depressing for them.

Most of the fun in going to one of these is to buy that special
electronics item that you've wanted for years for next to nothing and
fixing it up. The best thing to do at these is assume everything needs
some sort of repair and make offers accordingly OR try it out and know
something about it before you buy. I wouldn't expect too many sellers to
agree with a refund policy even if it doesn't work after the sale.

mlc@izzy.net (Tim Hynde) thoughtfully posted:

> This was truly one of the more entertaining posts I've read.

Oh, I kinda liked the "Windows is a piece of $#!%" and "My watch boots in 100nSec" posts.

;^)

> c.) I haven't found a flea yet that you couldn't find 120VAC SOMEWHERE, If
> your spending more than a hundred dollars or so test it out before you buy.

Ah! If you are really serious about buying equipment, carry one of those little 200W 120VAC inverter bricks *with you* in your backpack, along with a cigarette socket to car battery clip adapter. Keep a small marine or gel-cell battery in your car (or with a friend who has a table).

This way, when you "roll up" on a good deal, ask the seller if you can borrow his cigarette lighter, or car battery, for a few minutes. If you can't use his car (and if you have time), run back and get your battery.

If he refuses...There's your answer!

I keep an 8-cell "AA" battery holder and an assortment of pigtail power connectors in my backpack. This way, I have an adjustable 1.5 to 12V power source to test things there on the spot (I'm planning on making a complete test box, complete with ammeter and current limiting).

I also carry a bunch of "AAA" and "C" cells in my backpack ("C" cells can be shimmed into "D" holders with a few coins between the batteries).

The same rule applies, If they won't let you test it.....etc,etc,etc.

Will they give you their business card or phone number? Make it clear you will not bother them unless absolutely necessary (secretly write down their license plate number, for "Justin Case").

Also carry a pocket DMM (This is a *must* for any flea enthusiast - NEVER buy batteries w/o testing them first!) and a small, bright flashlight (for "inspections").

Smell the equipment too! This can be a big clue as to it's condition. Does it smell like something blew up? Does it smell musty or moldy?

Another clue I have found is the physical condition of the unit. Sometimes the "cleanest" unit of the bunch is the one that failed prematurely and got stuffed on a shelf or back in the box. Whereas the "used looking" units were just taken

out of service.

More importantly than "functional", is "complete".

Nuthin' worse than getting something and finding out a piece, or a board, or a module, or an expensive or rare IC is missing. Now you know it's not functional, and there may be little chance of it even becoming functional again.

I always assume "dead" until happily proven otherwise. Follow your instincts! If you have doubts, there's a reason! I always concider the scrap value of the item also. Any expensive goodies in it? The power switch may be worth more than the item!

Some of my best deals were the "I don't know if it works...Oh,..five bucks" deals.

It's a gamble...Ya' win some, ya' loose some!

Caveat Emptor!!!!! <sp?>

(Let duh buyer beware!)

The ham Poll at www.sarrio.com shown below asks a new question for the
month of October:

Why Have You Not Chosen To Join The ARRL?

Less than 1/3 of all ham radio operators are members of the ARRL. The
question for this month is
directed to those of you who are not members.

From the list of possible reasons below, select the reason that best
describes why you have not chosen the join the ARRL.

The most recent results from Oct. 16, 1996

I tend to be pessimistic and think that you're probably right about amateur
radio being dead in another 10 years. If not then, certainly by the end of
the next sunspot cycle.

However, I disagree with your point regarding QSOs. You say "thank god for
the net". What is preventing you from having the same discussions with
people over the radio that you have on "the net"? Absolutely nothing.
If your view of amateur radio is talk about the weather and your
hemmoroids, then I feel sorry for you. I've had numerous discussions
with people over the radio on a wide variety of very interesting
topics, the least of which is their health problems.

5268. Blowed speaker amps in van

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-16 00:00:00 UTC
From: "Leslie R. Turner" <lturner@postoffice.worldnet.att.net>
Message-ID: <3265AB7D.21F5@postoffice.worldnet.att.net>
Source record: 214677

Help!

I think that my UHF and VHF radios installed in my Chrysler T&C van may have blowed the speaker amps in the audio radio system. The radio system is the factory installed Infinity system, which has side and rear gate speakers that have amps mounted on each speaker frame. That means long runs of unshield wire from the main radio to each speaker location. The dealer said I need to replace 4 speakers at better than $250 each. I looked at the amps, they are potted making it difficult to test or repair. Does anyone have any ideas where I might find new replacement amps? And if I do replace the amps, what I can do to prevent the samething from happen again? I used shielded wire in all of my radio installations and the antennas are roof mounted.
Any ideas or help would be appreciated
Les K4ZGE

My guess is that you're looking for a J310 JFET. It used to be a fairly common RF JFET. The U310 was the same device in a metal can instead of plastic. You might retry your search looking for these more "generic" part numbers.

The only dumb question is the one that did not get asked!

Yes, it is possible and done often. Generally to fill in areas
with poor coverage, or extend the repeater service areas. It
usually takes a dedicated channel on UHF or microwave to link
them together, and the channel must be duplex...ie, talk and listen
at the same time. Not cheap.

Here is the cheap alternative, which we used for a while in NOme,
Alaska.

We (Seward Peninsula Amateur Radio Club--SPARC) put up a repeater on
Mt. Osborne, 4700 ft high, and the damnest place to get to...
The repeater is on 146.34/94. In other words, the repeater listens
on 146.34, and all it hears is sent out on 146.94. This is pretty
standard fare.

Mt Osborne is 30-35 miles North of Nome. From the airport, there
is line of sight, and you can hit it with a handie-talkie and
rubber duck antenna, no problem. From town, there is no line of
sight. Only 1.5 miles from the airport, but there is a hill just
north of town (Anvil Mountain) that rises 1,300 ft. Oh, there is
a signal in town, but it takes a home station and an antenna up
there to hit it full quieting. A mobile in a car can hit it
most places in town, but not all.

So here we were, all set to go, and this multi-thousand dollar
repeater all up on a mountain, and we can't really use it in
town! Grrrrr.. until no-code-tech WL7CSG came up with
Bright Idea #1.

He has an Alinco DR-610 in his house, which is a dual band 45 watt
mobile. Now, these dual banders have a built in VHF/UHF
duplexer, which means that it can transmit VHF while receiving UHF
and vice versa. It also has "crossband repeater" function. So
at his home station he put up a dual band base antenna. Then
he rigged his VHF side of the transceiver so it would receive on

146.94 and transmit on 146.34. The UHF side was set to 449.750 transmit and receive. Then he switched the radio to repeater mode, and turned it on.

Okay, now you can roam in town with a UHF portable, simplex on 449.750 and talk thru and listen to the repeater.

This is because when the DR-610 is idle, it listens on both UHF and VHF receivers. Say a transmission comes in on 449.750 from someones walkie talkie downtown. The HT transmission goes to Mark's house, and into his DR-610 and it then keys its trasmitter on 146.34. At this point, the 146.94 is deaf, but it does not matter. The mountaintop repeater picks it up on .34 and sends it out on .94, where a VHF mobile can pick it up.

The UHF portable calls the VHF mobile, and then listens. The VHF mobile heard the call on 146.94, and now he replies on 146.34. The mountaintop repeater picks it up on .34 and puts it out on .94. Now, the DR-610 in Mark's house picks that up, and retransmits it on 449.750.

This works great, but has some drawbacks that we will address shortly. It would be a perfect solution for someone that lives in a deep valley and no way to hit repeaters. All he needs to do is buy a dual band mobile, like the Alinco DR-605 or DR-610, and go to a friend's house on the ridge above the valley, or even rent space in a farm or somewhere, and put that dual bander to work as a private 'repeater' to be able to hit the main machine 50 miles away into L.A.

Just set it up like Mark did, and you can sit at home with a UHF HT and participate in the chosen VHF repeater like if you yourself were on that hilltop or farm on VHF talking to the repeater directly. You will hear everything the repeater users say, and by the same token they will hear everything you say.

Drawbacks? A few. First of all, the operation is crossband, so the dual bander passes VHF to UHF and UHF to VHF but not VHF-VHF or UHF-UHF. What this means is that if there are TWO walkie talkies on UHF in the valley, they will not hear each other unless they happen to be in rubber duck range of each other, which is about a mile or two, with no shadows, big buildings, etc. in the way. This is bad, the DR-610 serves fine to access the far-away repeater, but is no good for local communications. What can be done.

Well, along came this genius, AL7X, and he reasoned that TWO such Alinco dual banders could be made to do, and in fact that is the setup we have here in Nome right now.

Okay, at Mark's house the DR-610 is set up to receive on 146.94 and transmit on 444.750. In my house, the DR-605 listens on 449.750 and transmits on 146.34.

Now, the two radios do not bother each other as they are about a mile apart, so there is no desense or any nasty going on's.

Notice that now the UHF portables have to be rechanneled, in this case each and every portable TRANSMITS on 449.750 and RECEIVES on 444.750.

Imagine portable A wishes to contact portable B, which is inside the restaurant and cannot be reached by UHF rubber duck line of sight. So, he cranks up and calls on the UHF channel. His transmission goes out on 449.75, to MY house, where it gets put out on 146.34. THAT signal travels to the mountain, gets repeated on 146.94 and sent back to town (or to any listening VHF mobile or base station in range of the mountain). The receiver at Mark's picks up the 146.94 transmission, and sends it out on 444.750, where it can be picked up by ALL the town UHF handie talkies with rubber ducks. Thus, a handie talkie on the UHF channel can access not only the rest of the UHF portables in town, but any VHF mobile in range of the mountain top repeater. The VHF mobiles can in turn transmit on 146.34, be picked up at the mountain and the repeater output on 146.94 is audible by other VHF mobiles as well as the UHF portables in town, since Mark's dual bander repeater resends the 146.94 signal on UHF 444.75.

So there it is. In range of the mountain, you use a VHF station on 146.34/.94. In town, you use the UHF portables on 449.75/444.75. And all the stations, VHF and UHF can freely talk among each other.

Advantages? Many. Example, each time there is a QSO between two UHF handie talkies, it is proof the mountain top repeater is working as well, because the signal goes portable-my house - mountain - Marks house- portable. If the chain is broken anywhere, you know right away as there is no Kerchunk and no contact. If the mountain top repeater was to go off the air (keep fingers crossed!, tap on wood!), the users would find out, and phone one of us SPARCers, who would notify ME. Why me? Because I have the 449.75 to 146.34 translator here. What I do then is to switch my VHF transmitter from 146.34 to 146.94. This then routes the signal from my house to Mark's, bypassing the defunct mountain top repeater. This works like a charm. In fact, it could be done on an as-needed basis, ie, my rig could transmit on 146.94 unless the mountaintop was wanted to be used. We just haven't figured out a way to do this automatically, but we are thinking of a VHF and UHF modular trasmitter and receiver, with the transmitter being dual band and the frequency change being 146.34 default, and 146.94 being activated when a CTCSS tone is received on the UHF side. Or, vice versa with CTCSS being thru he mountain and no-tone being local only.

Disadvantages. None really, except for the guys with the DR-605 and 610's at home doing this dedicated function. The radio then is pretty useless for base use. In my house, If I transmit on VHF

.34, the portables hear me, and I hear them, so I am okay there. But Mark does not receive the UHF portables, although he can key his mike and they hear HIM. So its one way for Mark. Bum deal as he needs TWO DR-610's for the house, one for repeater use and one for base station use. Bummer.... $$$. But that is exactly what he just did, bought a third DR-610, so he has one in the house as repeater, one in the house as base station, and one in his truck for mobile.

So there you go, a complete real-life case history.

Oh, for you in the lower 48 states, the Case #2 dual site thing is a repeater in his own right and needs to be freauency coordinated. Here in Nome, we are the only ham club within 450 miles, so we coordinated the mountain top VHF, but not the town UHF. Will we? I would say so once we have a few things worked out, like maybe try for a different UHF channel. 444.700/449.700 matches the Anchorage channel, so we might go for that, except that I pick up some sort of birdie on .700, so we may need to switch and me being the UHF transmitter site/VHF receiver. No big deal, but can't do it right away as everone is now expecting it on .750. This winter, after everything settles back into a nice sleepy small town, we will try to hunt around for some way to use the .700, and then get it coordinated.

For you with the UHF side on Simplex, case 1, it is not really a repeater per se, but something called a "remote base" which needs NO coordination. Use one of the UHF simplex channels so you don't hog the UHF repeater band and ruin it for someone else. Be sure to listen, and make a few calls on the UHF channel you choose and make sure it is vacant, or shared by someone compatible with your ideas. You'll be okay then.

Good luck, hope this answers your questions.

You can't do too much operating on HF with your Tech+ ticket, so we'll have to dismiss your comments regarding what occures on those bands.

Now, whether it be the first time or the 100th time I've worked another country with a transmitter I build myself into feedline and antenna that I also constructed, the same thrill is felt. You'll never experience that thrill since you're a self-admitted appliance operator.

>Contesting and DXing have BOTH had their "importance" GROSSLY
>over-inflated by the "It's ONLY a hobby!" group and their self-centered
>view of the world that says "They're our bands, just for us to play in,
>and we don't want newcomers coming in and overcrowding them so that we
>don't have room to play our games."

First, it is a hobby 99.9% of the time for most of us. The building and operating aspects can't be called anything but that. Now the remaining 0.1% is spend providing a community service during times of hurricanes, search&rescue, flooding, power outages, et cetera. It is the hobby-type operating that has prepared us to be effective communicators during that 0.1% of the time; quick exchanges during contests, and handling pileups as a DX op are *very* good training for working a flood of health & welfare messages during a disaster. Even the military recognized this; our best communicators in the Coast Guard were always hams - they could work a dozen comm channels all at one time with no stress. I used to thrive at having several distress cases going at once - the aircraft, marine voice, RTTY, and CW freq'ys would all be jumping. The skill that allowed me to work under such emergency conditions with ease were gained from my day-to-day hobby-type DXing and contesting on the ham bands.

>These gamer, "Only a hobby" attitudes will cost us our bands if they
>continue to run rampant the way they have in the last 30 years or so.

It's the hobby-type operating that builds our skills which make us shine in the community's eyes when disaster strikes. (One wonders what you do on the VHF freq'ys - yacking on a rptr *is* hobby operating, Carl.) It was the hobby-type operating 99.9% of the time that had gained us new HF hands during the last decade; and we stand to gain even more HF spectrum according to the government.

Interesting. You're actually calling for folks to put away their
mics (typical QSO rate is under 150 wpm), and keyboards (I type
under 100 wpm). That's a bit extreme (even for you) wanting to
ban the voice and keyboard modes. You're becoming a Carl wanna-be.

RE: the discussion on having to drill holes in circuit boards:

I once did a board where I first drilled the holes, then used fingernail polish as resist, and then etched it using that stuff Radio Shack sells {ferric cloride, I think}. It was an AM radio using all discrete parts, so hole position accuracy wasn't that critical (IF transformers were the only exception). Only downside: the residue of fingernail polish in the holes was kinda stinky when I soldered parts to the board. Other than that, it worked fine.

CW is the gatekeeper of ham radio. If we eliminate the CW requirements, you will soon be able to pick up a license at Wal-mart,
along with the latest appliance operator special. I of course exagerate to make a point, but CW, love it or hate it, has been every
hams baptisim into the realm of hamdom. The No-Code license has forever changed that.

We CW dinosaurs, as you no coders think of us, do not complain that you all are not on CW. I love the elbow room I have on all
CW bands. But I will never agree to eliminate the CW requirement for HF privaliges. It is after all a privalige, which is something that
must be earned. Maybe CW is not the current "in" mode, and maybe it has been abandoned by other services, but Ham Radio
started with Code, and when it is eliminated, it will mark the beginning of the end.

I do encourage everyone who expresses an interest in ham radio, to get their license. I do not want to participate in a hobby that is
elitist. I want Ham Radio to continue to grow and evolve, but eliminating the CW requirement is not the answer.

Unfortunitly, I am sure that in the end CW will loose out. The equiptment manufacturers succeeded in getting the no- code tech
license created, so that they could sell a lot of radios. The end result is that the no-coders are the largest segment of the ham
community. This will enevitably lead to the demise of the CW requirement and Ham Radio as we know it. As soon as it is put to a
vote by the ARRL, what do you think will be the outcome? Let's see you can have all the rights and privilages of HF operation
without learning the code. What say ye No-Code majority???

If you think the ARRL is watching out for your interests, think again. They pay the bills with the AD dollars that Kenwood, Yaesu,
ICOM, etc. spend month after month. They will put the best face possible on this CW debate, but in the end, they will recommend to
the FCC that CW be eliminated as a requirement for HF licences.

I am by the way a member of the ARRL and have been since I was first licenced. They aren't much but at present, they are all we
have, and I would encourage everyone to join, and vote for CW friendly candidates in EVERY election. The ARRL can be
changed, but it will take members who are willing to spend the time and let their voice be heard.

Do I sound like an old fart who should just shut up and die? Well maybe so, but I have been licensed for 17 years and at only 31
years old, I feel like an old timer. I love Ham Radio, and I love CW. If we loose this fight, I am sure we will be religated to 5 or 10

KC's at the lower end of the bands. Then I guess, All those CW ops who are sitting idly by, will wish they had done something.

Best 73's and cu on the low end of the bands

David, KA4IKH

CW FOREVER!

>digit serial number. I dont have the test equipment to fix it. Soo this

well, there it is, mark. if there's a reason why equipment building and repair will be a lost art, it's because people aren't introduced to what equipment and tools they should consider acquiring should they wish to delve into such an activity.

a recent QST had an article about a homebrew sheet metal brake, for instance. screwdrivers, sockets, saws, files, drills, etc. all help make homebrewing more enjoyable since you aren't stopped by lack of a box or other hardware.

i'd almost suggest that a new ham's first purchase should be a tool box and a good selection of common tools to fill it.

>ludicrous. Thank you.

No, it's not crazy. However, you can't really tie a number of standard repeaters together on their mobile/portable input channels. What you have to do is connect via radio links on other frequencies. Then you can do your audio and ptt routing correctly and you don't have things key up and get stuck keyed up. The one system I'm most familiar with is one is was a co-founder of. If you have Web access, look up the address

http://www2.hmc.edu/~cactus/index.html

and then look at the map that has a pointer to it.

If you want to discuss the system, I'll be glad to do so via e-mail but not in the newsgroup.

>It SOUNDS like your point is "If we're not *already* using it and it's
>not *already* being mass-produced, we can't even *consider* using it.

I don't think that way myself... but I DO know that it takes two people
to communicate... A lot of modes, I am the only one interested in them,
so that makes my radios big, $500 paperweights. Most hams don't have
the knowhow to build their own microwave, etc., radios. I don't, but I
want to learn. The more people use a particular mode, the more popular
it will become. If a mode gets popular enough with the experimenters,
it can be mass-produced. I wrote THIS message during the day, but it's
too early for me. I still got fried spam...

5287. Re: Handheld Dual Bands - who makes the best one?

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-17 00:00:00 UTC
From: paul@moe.cyclades.com
Message-ID: <546dsh$gmr3@ha2.rdc1.sfba.home.com>
Source record: 214509

Jeff Hawkins (jhawkins@teleport.com) wrote:
: I'm just now working on my no-code tech license and I'm looking at a dual band
: handheld as my first radio. Does anyone have any suggestions as to the best
: one to go with?

That's a religious argument there... Simply put, there is no "best"
radio.

I've been on the air for a while, and have heard people complain about
their radios. For the most part, they are happy with them, but have a
few gripes.

Alinco: Cheap. And inexpensive. Lots of features for the price, but
quality tends to be lacking. Proof of "you get what you pay for".
Several owners reported high sensitivity but poor selectivity; others
report the opposite. Rather low in overall quality control, but has an
excellent "extended warranty" plan.

Yaesu: Also well made. Some find their HTs confusing to program.

Kenwood: Also well made. Kenwood has occasionally fallen for "creeping
featurism", where they add things that aren't really needed. (Does
anyone *really* need video games on their HT?)

Icom: Generally well made, solid engineering. The 2AT radio has a
reputation for being virtually indestructable. Their high end radios
hold their own against any others. Generally regarded as being in the
same league as Kenwood and Yaesu, but a "hair" better (and more
expensive).

Radio Shack: No dual band yet, but their single band HTs are of the
"big and tough and you can drive nails with them" variety. Rumored to
be made by Maxon, the radios have an excellent receiver. The only
drawback (to some) is that they are ham-band only; no listening to NOAA
or the cops on these. (No diode-cutting mods, either.)

Standard: What I own, two, in fact. Outside of the US, Standard is
"the" radio to own for commercial use; at the level we give to Motorola
in the US. I'd buy another Standard if I was in the market for a third
HT.

Before firing up the flamethrowers, please kepp in mind that this is
just a report of unsolicited comments that I've heard over the air and
in person. I don't report on specific models, since with the exception
of what I have owned, I can't comment on them.

The Dummyï¿½s Guide to making money

- Or for the more educationally inclined -

Guide to fiscal independence for the intellectually challenged.

Hi Everybody :

All these new get well schemes on the net were begining to
really get on my nerves. I hate all get rich schemes. They are usually
scams perpetrated on the innocent net denizens by evil trolls who live
in the internet. But what I am about to tell you is not a get rich
quickly scam, it is a true and tried method that has helped me and
several others. Why am I about to share this with you ? Because I am
sitting here with nothing better to do with my time. You see after
seeing the incredible amount of money that has rolled in, I have nothing
to do but share my good fortune. I am also quite stupid. Otherwise why
do you think I would want to let you in on a secret money making scheme
? Anyway here it goes :
This is so simple that you would think, "Why didn't I think of
it earlier ?". It is very very easy and completely legal. There is just
no grey area, the law is very clear on this. This is legal. One of the
first things you have to do is to believe in the process. This works. I
can give you my word for it. You must be pretty dumb if you are going to
do what you are going to do just because I gave you my word. If you were
not then you wouldnï¿½t be reading this !
Enough of horsing around, lets get down on our knees and start
seeing some real money ! The system works like this : You must get a
JOB. Yes ! Itï¿½s that simple. I did not believe it at first. I was
reluctant to try it. I had already burnt my hands on similar
hare-brained ideas and was not about to do it again. But this was
incredible, you just show up at work and then sit back to enjoy your
wealth. I tried it and it works !! The first week I received a gigantic
total of $170.00 !! It worked out to an unbeleivable rate of $4.25 an
hour ! I could not believe my eyes. I have never seen so much money in
my life. Suddenly I could do the things that I always wanted to do. I
could have the things that I always wanted to have. I immediately went
out and bought myself a new T-shirt at Wal-Mart. Talk about dreams
coming true. And this is not the end. You can get money whenever you

want. When you run out of money, all you have to do is get another job and the money again starts rolling in ! I have seen some people make as much as $206 in a week (that is $5.15 an hour !!). It is only limited by your enthusiasm and effort. A young couple in Murfreesboro, Tennesse received over $280 in ONE week !
So just go out there, get a job and watch untold wealth roll into your lives ! It really is that simple. Now since I have shared this information with you ....naah ! forget it, this one is on me, folks !!

Paul C <paul@moe.cyclades.com> wrote:

>That may be true. It's quite good at keeping all of the engineers,
>computer enthusiasts, and "rocket scientists" out of the hobby.

Gee, you don't happen to have any proof of this claim, do you?

See, in the late 1980's people claimed that the code requirement
was keeping all these gee-whiz techno-geniuses "just waiting to get
into the hobby" when that nasty code requirement was dropped.

Well, we dropped the code requirement, and what did we get? Did
we get hoardes of techno-geniuses? Not at all. Instead, like many
expected, we simply attracted a larger number of hams that actually
represent a cross-section of the American population. We got some
techno-geniuses, we got some morons, and we got a lot of people
who are in the middle.

>Engineers that could be working on the "next big thing" in
>communications. People that can be working on our digital networks,
>getting them above the pitiful 1200 baud (or 300 baud on HF) that they
>are running at now.

Engineers who could be working on bring T-3 capabilities to a
2.4khz channel are more likely to be doing it in a professional
research environment where they will make million$ of dollar$
for their invention.

>And what's the problem with "appliance operators"?

Absolutely nothing. The "Appliance Operator" is the Ham Of Today
(a few years ago I would have said "The Ham Of The Future", but the
future is here, now.) I'll be the first to admit when my new Yaesu
Ft900 bit the dust on field day I stripped it down and traced the
circuit as far as this SMT IC that I couldn't figure out what it did.
I figured it was a custom CPU chip (I figured right) and I had to send
the unit back to Yaesu for repair (they replaced the CPU).

>As for being an effective gateway.. simply look at 20m. Every legal
>US op on that band has passed at least a 13 wpm code test, and it's
>far worse than anything else I've heard.. including CB.

Oh, I really doubt that. Sure, there are a few morons on 20 meters.
But, compared to the total number of licensed amateurs, they are
insignificant.

>No, for the government to resstrict rights by requiring a license to do
>something, there must, of necessity, be a reason to do so ... that
>reason being the public interest, necessity, or safety.

Not that I agree with it, but the government generally makes laws that
reflect public morality. The majority find an action unacceptable, and
the government passes a law to prevent it. Assuming the law does not
infringe on an otherwise contitutionally-protected right, it will
remain law until a majority of people decide the law is wrong and
should be recinded.

>There is a big difference between receiving a check from the government
>(which comes from my paycheck and yours as taxes) than being permitted
>the use of a public resource which is regulated in the public interest
>by the government.

A subsidy is a subsidy is a subsidy. Doesn't matter if you physically
receive a check or receive another benefit from the government. Access
to radio spectrum is a privilege, not a right. As such, it can be
reasonably construed as a subsidy of sorts.

>Hams are SUPPOSED to "pay back" society for the use of our vaulable
>spectrum allocations by performing public service and by learning and
>training ourselves to be better in terms of technical knowledge and
>skills.

Maybe, but that's not what is happening. Instead, people are just
yacking.

communication modes. Yes, you too can merely read words on a computer
screen and let the specialized ICs do all the work for you!"

>You can't continue to confuse the issue with your nonsense, Jim ... his
>utterance of Morse Myth #1 is patently false according to any reasonable
>engineering evaluation,

Its nice that you preach everything in theoretical terms, but practice
often yields different answers. Shannon's Law dictates what the
theoretical maximum thruput of a bounded channel is, yet often you'll
find that it is much less because conditions are not optimum, or you
do not have the necessary equipment to make totally efficient use of
said channel.

In the same vein, in many respects CW remains a way to "get thru"
when voice can't. Oh sure, you can preach to me about rolling me over
in the Clover, but I don't hear too many CQ CLOVER CQ CLOVER stations
out there. So much for "getting through" when there is nobody on the
other end to get through to.

On the other hand, give me a 250hz CW filter, as well as notch, APF, and
shift/width controls, and I can pick up a CW signal that you never
knew was there.

Where are all these modern communication modes in amateur radio? Where
is all the commercial gear supporting these modes? Where are all the
QST home-brew articles showing amateurs how to build all this whiz-bang
super-techno equipment?

The internal combustion engine is almost a century old too, but still
seems to be chugging along just fine.

>>Ham radio is a hobby with a public service aspect.
>
>No ... despite your aversion to reality, we are a service with a hobby
>aspect ... see Part 97.1 ... try reading and learning something for a

Funny, I can almost swear that CB radio is called the "Citizens Band
Radio SERVICE" too. What SERVICE does CB radio serve?

>I know it's harder than spouting off with no idea of what
>you're talking about

Pot. Kettle. Bang.

> (your normal mode of operation), but you really
>should try it ..

Yet more ad-hominems. Something Carl is constantly claiming the "pro-code"
people do.

That is correct. CAP communications have been moved from FCC enforcement
and control to NTIA, the same as any Federal Government agency. Therefore,
any CAP business is classified as US government business. Therefore, CAP
use of non-governmental frequencies is a violation of the NTIA rules.
It would be the same as if any other federal agency would use amateur
frequencies to conduct federal business. Ther has been many exchanges
regarding this issue on the cap-comm talk group.

This is a problem here in Norway where we have many long tunnels. There seems to us to be no method to communicate into tunnels if there is an accident.
There seems to be these alternatives:

LF communications
VHF communications
SHF communications
Carrier frequency equipent.

Cables can not be used as they will be destroyed by the accident.

Is there anybody out there who knows anything about this?

Hello all Richard KT4IJ here. I am going to try the qsl industry a
bit. I can make and sale custom designed QSL cards for about
30 cents a piece.. They will be printed on photographic paper
<heavy stock> and can have graphics like your call and the
QSL info put on there along with a picture of you in your shack
or your tower or whatever photo you would like to see on the
front of your QSL!! Custom designs avaible. You can even recieve
your proof via e-mail and make sure it is what YOU want before
they are printed!!! Sound good? E-mail Zepplin@TRELLIS.NET
for the info......coming soon a web page with examples to browse
thru'!! Thanks for your intrest....

: Hmmmm. $189 ? Check out the price of the Alinco DJ-180T, it is
: now going for $199 brand new and its a good set. I have one,
: my only complaint on the DJ-180 is that my eyesight is not too
: good anymore and I have a heck of a time reading the LCD display.

: Other Alinco models have larger LCD's with big numerals for us old
: geezers. Standard is 10 memories, optional is 240 or so.
: Larger batteries for extended time, or for more power, or both
: are available, as well as speaker/mikes, cases, fast chargers,
: you name it. DTMF keypad is standard.

: YOu pays your money and makes your choice.

Wish I had paid more attention this past weekend. Alinco had a large booth at the Southwestern Division Convention in Phoenix (Mesa) and I didn't pay as much attention as I should have. Several of us were manning the booth to take advance registrations for the same convention next year in Riverside, so our time was somewhat limited. But, Alinco had a neat 70 cm HT that was about the size of a pack of cigarettes or somewhat smaller. I suppose asking for a dual-bander that size is being to greedy. :-)

>What a bunch of crap - we're all adults and able to make decisions. If
>you want things with guarantees - go to Sears and pay $$$$$. I've found a
>lot of real neat things at flea markets and for cheap!

Yea, no kidding. I picked up a Kenwood UHF rig (circa 1992) for $35!! Did I
really expect it to work???

Actually all I had to do was ditch the surface mount micro (the one that did
all the DDS stuff) an replace it with a home brew PLL synthsizer, works
great!

I'm sure they guy that sold it to me didn't have a clue, so what should he
have said "Gee this is dead as a door nail and there's not a chance in hell
you'll ever get it working"????

HAM RADIO OUTLET PURCHASES

ASSETS OF TUCKER ELECTRONICS

AMATEUR RADIO BUSINESS

FOR IMMEDIATE RELEASE

FOR FURTHER INFORMATION CONTACT

John F. Holloran, Jr.

(214) 348-8800 x8363

jholloran@tucker.com

DALLAS, October 16 - Tucker Electronics Company, a distributor of new and reconditioned electronic test & measurement equipment, amateur and shortwave radios, and electronic hobbyist products announced today it had agreed to sell substantially all of its assets related to its amateur radio business to Ham Radio Outlet ("HRO").

Tucker Electronics has discontinued operations of its retail store and consumer mail-order business, and the company will immediately begin to transfer the purchased assets to HRO's stores. Tucker plans to market its vintage radios and any inventory not acquired by HRO on its website (www.tucker.com) in early November.

The sale of its amateur radio business will allow Tucker Electronics to focus on its core business, distributing new and reconditioned electronic test & measurement equipment.

5316. When is Dayton 97

Hmmmm. $189 ? Check out the price of the Alinco DJ-180T, it is
now going for $199 brand new and its a good set. I have one,
my only complaint on the DJ-180 is that my eyesight is not too
good anymore and I have a heck of a time reading the LCD display.

Other Alinco models have larger LCD's with big numerals for us old
geezers. Standard is 10 memories, optional is 240 or so.
Larger batteries for extended time, or for more power, or both
are available, as well as speaker/mikes, cases, fast chargers,
you name it. DTMF keypad is standard.

YOu pays your money and makes your choice.

It is not only my opinion, it is my families opinion, it is the opinion
of many of my students and non hams I come in contact with.

A life is more than talking on a radio about nothing to someone you are
unlikely
to ever meet. A life is more than call CQ Contest and exchanging both
false and useless information.

Oh? How big are your cells? ;-) How did you arrive at that number?
Which rules are YOU reading? You also must consider data rates,
spreading gain and the size of the band you are attempting to work in.
Maybe you're happy with 1200 baud. I was talking wireless, high
data-rate multimedia.

For DSSS, you can have multiple signals spread about the
SAME center frequency if PN codes are sufficiently random
and numerous.

But Part 97 states...

(d) The only spreading sequences that are authorized are
from the output of one binary linear feedback shift
register (which may be implemented in hardware or software).

(1) Only the following sets of connections may be used:

Number of stages Taps used in
in shift register feedback
7 7, 1
13 13, 4, 3, and 1
19 19, 5, 2, and 1

If you are going to use the shift register's output in
a parallel manor as a WORD to select an OFFSET into a
frequency look-up table (the table itself can be varied),
then you get quite an assortment for frequency hopping.

But I was talking direct sequence which, as you may
know, is the preferred method for high data-rate digital.
In that case, the SERIAL OUTPUT pseudo-noise stream from
this shift register is essentially used to modulate
the carrier, the data to be transmitted being XORd
with the bit stream. The bits of the PN stream
typically result in a phase shift of the carrier.
And there are the usual variations in those modulation
methods.

On the recieve side, an identical pseudo-noise stream
is synced up (via a corellator circuit) and the original
signal is extracted.

So it looks to me like we only have THREE (count 'em)
pseudo-noise streams. Furthermore, and to quote the
ARRL handbook, "these three sequences are the only
ones that amateurs are allowed to use."

Have things changed recently?? If so, too little too
late. We needed many hams utilizing these bands on
a daily basis using such methods if we were to keep
them. Instead, expect the FCC to take away even more
amateur access to 900 MHz and up. These frequencies
are dropping like flies.

> Have you *tried* using the spreading codes we're allowed to use?

I'm curious. Which PN streams have YOU *tried* ??

>Do you *really* expect a higher density

Yes. If this is to gain wide-spread ;-) use, you
need more than a whopping total of THREE possible
pseudonoise streams.

> Any advice or suggestion of book would be welcome.

Well, sebastian, this is nothing new. It was standard amateur
and commercial radio fare until the late 1930's. The
drawback is that selectivity (ability to separate stations
close together on the dial) is rather poor on such a set.
The reason a superhet is the receiver of choice is that when
the desired station is tuned in, it falls into the I.F. and
then a filter can be built just for that I.F. frequency.

The front end (at least an oscillator-mixer, or also called
a converter) is tuned to put the desired station in "tune".

But you can do it the old way. Here are four methods, take
your pick.

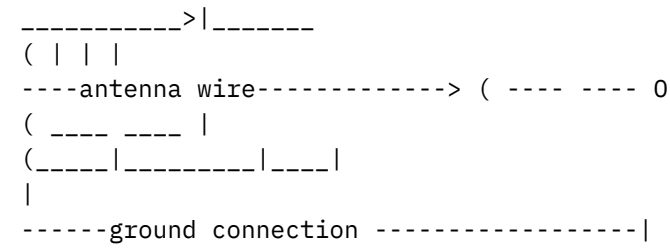
#1. Dead simple. A crystal detector. It will not be very
selective; tuned to the broadcast band .540-1.700 kHz, it will
probably pick up ALL the radio stations in town! If you live
in a town with just one station -- the case in rural areas --
then no problem. Some Crystal sets have fancy "tuners" to give
it a modicum of selectivity. A single tuner is normal; no tuner
was common in the 1910-1924 era; dual or triple ganged tuners,
loose coils and a host of other gadgets improve its performance
on bands with more than one or two stations.

The crystal set normally drives headphones directly, but you
could feed the audio to an amplifier, like a hi-fi or boom box
and pick up much weaker signals that way, and be able to listen
on a speaker.

Crystal sets traditionally were made with a chunk of Galena Quartz,
which is a Galena/Quartz mineral ore, a rock maybe 1 inch in
diameter or more.

You mount this on a metal base which is one connection, the other
connection is a needle that can be poked into the Galena and held
there with a fairly stout spring.

Typical wiring is like this:



Here the coil is maybe 50 turns of wire, or more, and the capacitor across the coil should be a 365 pf variable. The diode shown is the galena detector, or a store bought 1N34 or 1N914 diode. The '34 is better for this use. The headphones look like the letter "O" and must be magnetic type; ie, wound up with wire wound electromagnets. Telephone handsets have the right type. Or any old surplus headphones. They come in 600 ohm, 2000 ohm types, etc. If all you have is stereal 8 ohm headphones, you can use a transformer to step the impedance up; 8 ohm winding to phones, high impedance winding takes the place of headphones shown. A 2K to 100K transformer can be used likewise for crystal earphones, with the 2K going to the detector, 100K to the headphone.

You connect the set to a waterpipe ground; the antenna is tapped on the coil. The lower the tap, the more selective the radio will be, but the less sensitive.

In the old days it was rare to find variable capacitors, so a fixed one was used. Typically alternating layers of aluminum or tin foil and glass window panes. The set was then tuned by shorting out portions of the coil, and some fancy ones were made, with sliders, cranks, variometers, etc.

The antenna should be a wire about 50 ft long strung out the window to a tree.

If you have an AM broadcast station in town, or within 20 miles, this puppy will pick it right up (and probably pick up all sorts of other stuff).

A real galena detector is much more sensitive than the store bought diode. You move the needle around the rock until you find a "hot" spot, and leave it there. It will work for hours or days there, and then the set gets hard of hearing and you have to hunt for another spot. No big deal. Did it a lot as a kid. Many crystal rocks will work, maybe even granite or marble, or maybe a chunk of hard lignite carbon, your guess is as good as mine. A good galena rock is best and ranges to 400 miles is not uncommon.

Some substitutes from the old days. The electrolytic detector was popular, a metal flask with weak acid (battery acid is fine, or muriatic acid). YOu dip the needle into the acid, and draw it out with a setscrew. As it follows the needle up from the surface, due to surface tension, the receiver gets more and more sensitive until

just before the needle comes clear of the liquid. No good in ships at high seas.

The flame detector is two metal plates about one or two inches in diameter, with adjustable spacing, say 1/4 inch, and play a bunsen burner in between them.

The coherer detector is a glass tube with metal plugs at each end, and filled with iron filings. This conducts electricity when a radio signal is received, but at that point it stays conducting! You use it with a doorbell mechanism. When the signal comes in, the detector conducts, which shakes the doorbell thing, which you hear, and which also shakes the detector. Shaking it up resets it, and if the signal is gone, it quits ringing the bell. There are clockwork shakers too, and no power is needed as with the bell mechanism, in which case you listen with phones. The coherer detector with clockwork shaker is more sensitive than a store bought diode, but nothing like the galena, which was king for a long time. The coherer was Marconi's favorite, and he put up a giant station in England, and a receiving station in Newfoundland, and sent a signal across in 1901. Not bad.

The companion transmitter is a spark transmitter, but I won't go into those, unless someone asks me to.

When tubes came into being around 1921 (they been around since 1914 or so, but not available in the marketplace), they were crude triodes, usually made out of light bulbs, and later refined. If you have a vaccum pump you can make one up yourself. A hose filled with mercury is a fine vaccum pump. One end goes to the glass tube stem, the other dips into a jar of mercury. A clamp holds the mercury from settling into the jar. You hook up to the stem, get your torch or bunsen ready, and open the clamp until the mercury all runs into the jar. This pulls the air out of the glass bulb. Get a light bulb, 15 watt fine. Make a grid and a plate, melt holes in the bulb to bring out the connections, seal them with molten glass. Draw out the air for a vaccum (use a one inch hose, maybe 10-20 feet long, full of mercury), then take your bunsen and seal the stem before you disconnect the hose. Should work, sort of. Don't expect miracles out of a home made tube, even by 1915 the methods were much more refined! But it should work long enough to prove that it works.

Okay, how to make a radio out of a triode. You could use the triode as an amplifier at audio to boost the signal. This is a good method for receiving a distant station with no nearby interfering signals. Ships at sea used them for a while. Land or shore stations had them darn hams to contend with and soon abandoned it. A modern version is your boom box as an amplifier, instead of a tube. If you want to use a store bought tube, the 6C4 triode is fine, or you can get a real UV-201 triode, also called plain 201 or '01. The 6C4 needs kinda strong source of 6 volts for the filament and

50 to 200 volts on the plate. I leave the amplifier design to you. But with resistor on the plate circuit, a crystal phone can be put across the resistor and you eliminate the need for magnetic phones or transformers. If you do this, put the ground connection on the plate circuit so you don't have lethal voltages on the headphone wires, or use decoupling capacitors.

The UV201 will work fine with 45 volts up to maybe 90 or 100 volts on the plate. A string of batteries is practical with this one. Filament is 2.0 or 2.5 volts, usually set with a rheostat to as cool as the set will still amplify adequately, otherwise tube life is s-h-o-r-t.

Okay, the triode can also be used as an r.f. amplifier, which is a bit tricky. You use tuned circuits input and output, which gives you a double tuner effect, much more selective. You need to neutralize the triode; the usual way was a link coupled to each coil input and output, with the connections reversed so the set would neutralize instead of oscillate. The links were adjusted near the coil, or turned at an angle to it to get the adjustment just right.

Modern tubes, with high gain, make practical the use of a grounded grid circuit which needs no neutralization, or you could even use a pentode, like a 6BA6 for an amplifier. Really modern would be a transistor or f.e.t. amplifier.

This type of set is selective enough to pick stations 200 - 300 kHz apart on the a.m. dial. Don't forget you can add more tuned circuits between the antenna and the detector to increase selectivity. They loosely couple to each other, various methods. The adjustable link or a variometer being favorites.

Third method is to use the triode as a detector. The first type is the grid leak detector, which is not bad. Looks like an r.f. amplifier, but with r.f. in and audio output. What you do is to adjust the bias supply until it detects; that is, recovers the modulation instead of hearing nothing. Not critical at all, but helps to have a bias battery with a potentionmeter. On a UV201, the grid bias voltage should be variable between about -22 v and zero volts. Grid leak, maybe 100K to 1 megohm.

Fourth method is to have the triode serve as a regenerative receiver. This was king until the 1930's. You hook up the tube as an r.f. amplifier in the grid, but take the plate lead out of the tube, and wind it into a link and bring it near the input tuner circuit. The lead then bypasses to ground, and goes to the headphones or output transformer. You adjust the link coupling (a turn or two is usually enough) until the set oscillates. If it don't, reverse connections to the link and try again. Adjust bias and a few other parameters if needed. Not hard.

Many people wound fixed links and put a rheostat across it to adjust the regeneration.

Anyway, the most sensitive spot for regeneration is just where the tube fails to oscillate. At this setting it will receive AM signals just fine, with worldwide sensitivity on the short wave bands. As it just breaks into oscillation, it acts like its own BFO and you can hear morse CW signals just fine.

You can even send a weak signal for a few miles.....adjust the set for oscillation and key the antenna or power supply lead and a signal goes out. Not too elegant, but....

The regeneration of the detector raises the Q factor of the tuner to such a degree that selectivity is greatly enhanced. This type of set was used not only for receiving a.m. broadcast stations, but was a standard for radio hams and shortwave buffs for decades. In point of fact, it works fairly well today in uncrowded bands, like daytime 75 meters, etc. The set is able to receive SSB, but it is too touchy to really tune such signals in well, so it is usually best for c.w. and a.m.

All the sets with tubes shown above could have extra tuners, as explained, and they could also have r.f. amplifiers between each tuner, feedeing a grid leak or regenerative detector. The r.f. amp to grid leak detector is called a T.R.F receiver, or tuned radio frequency receiver. Usually one or two r.f. stages were used, but three or four were not unheard of. With double tuners at each point, you could have 8 to 10 tuners in the circuit, although 6 was more common. They were gang tuned by ganged capacitors. These sets, to about 2,000 kHz are as sensitive or selective as the typical superhets. They are hard to align properly, however, and technicians hated them for that.

Instead of a grid leak detector, you could feed a regenerative detector so you don't send a weak signal over town as you tune around. In many countries this became mandatory. In world war II, the resistance used many a set without an r.f. amp, and the Germans would find the weak signal from the receiver, direction find on it, and send the guys up the chimney! The r.f stage is usually just one, as the detector is sensitive enough. Usually the r.f. stage has variable gain, makes for a much more stable detector too as the antenna swaying in the breeze does not detune the set. Howver the r.f. amp--detector regen set was not as popular as the one tube detector only wonder! With an r.f. stage, a gain of one is okay, but a bit more can be used to get more volume out of the set. Extra tuners are not needed, just two. One for the antenna and one for the place between r.f. amp and detector. Remember the regen detector adds tremendous selectivity.

Other uses of tubes were as audio amps following the detector or r.f. amp--detector. They could give ample volume on headsets with one stage, or with two or three stages would drive a loudspeaker.

An old set with push pull audio tubes, like the ubiquitous 201 driving an electromagnetic speaker sounded (and still does) just beautiful. This speaker had a electromagnet instead of a permanent magnet. The radio power supply used the coil electromagnet as the d.c. power supply filter choke, saving one component there. Most of these speakers were 12 to 18 inches in diameter, and the coils and voice coils maybe 4 to 6 inches in diameter! Heavy, and like I said, beautiful sounding. If you get your hands on one of these radios, and the speaker is all torn up, have it rebuilt. An old 1920's radio, particularly one with some shortwave on it, is worth easily $1000 to $5000 and up, so having the speaker rebuilt for $200 or so is not out of line.

Last is the superregenerative detector. It is similar to the regen detector, but the set ALSO oscillates at a supersonic "quench" frequency, like 50 to 200 kHz. You can't hear this on the headphones, but its there. The idea is that the regen detector is allowed to go into oscillation, the quench is turned on which destroys the oscillation. This means that the regeneration can be turned up even more and more, and the detector is the more sensitive. The disadvantages are it is a.m. only (but works with wideband FM too). CW cannot be copied. You normally will find such circuits with fixed r.f. regeneration already set pretty high, and not adjustable. The super regeneration quench control is a rheostat on the panel, although can also be built fixed. If variable, you listen to the set and adjust the thing until you hear a distinct "plop", and there you are. Most sensitive spot. This detector is mjch more sensitive than the regen, but nowhere as selective. One built for 6 or 2 meters pretty well picks up all or half the band! You could use cavity tuners and improve on things. Or put r.f. amps in front.

The effect in town is the same, a weak warbly hissy thing being transmitted. The vast majority were built for the old 5-meter and 2.5 meter ham bands. By ingenious circuitry, the same tube could also act as a VHF oscillator for transmitting. With the addition of a carbon mike, headphones or even as a combined telephone handset, you had a one tube, battery operated VHF transceiver. It is not very useful today due to crowded bands, but in the 1930's and early 1940's into the late 1950's these sets were common. Once taken out of home stations because of QRM, they worked fine in camping trips, etc. The battery operated 1L4, 1U4 etc type tubes, or the 6-volt acorn tube would work fine on 56 or 50, 112 or 144 bands, and the 220 and 400 or 440 bands. Power output is about half a watt, the grid modulated oscillator sounding sort of awful, but understandable. Heh heh. One of these would talk all over town and then some, with a high halo or dipole antenna, fed with twin lead or twisted zip cord wire for feed line.

Many hundred to 500 mile qso's were made using the superregen receiver and a high power separate transmitter, typically

10 to 50 watts before WW-II, and up to 1 kilowatt after 1946,
all modulated oscillators.... Tuned lines of parallel copper
pipes were the norm for 2 meters and up for tuned circuits for
receiver and transmitter both.

Most of this info can be found in the ARRL handbook, or perhaps
in DeSoto's "200 meters and down" book. Many old books of the
1920's and 1930's, even non-ham or even non-radio books will
have articles once in a while, as building back then was very
common. In 1925, getting a nice TRF or RF-REGEN receiver, with
loudspeaker etc might cost $100 to $200. Imagine what that is
in today's money! Many people worked in those days for $1 to $3
a DAY. Of course,there was no income tax, so it was not too bad
from that angle. Nowadays, we have a crazy system that decrees
the harder you work, and the smarter you are at making ends meet,
the MORE they tax you! Then, they give the money to some shiftless
woman that WON'T work! Go figure.

Have fun.

Actually Levi, what we're REALLY getting sick of is people re-posting
the WHOLE BLEEDIN' MESSAGE just to make a two line comment as you did.

In a August 27, 1996 copyrighted newsletter from the Dole/Kemp campaign,
their intent to pay for the $548 billion tax cut includes, quote,

"Fifth, $34 billion will be raised by acutioning part of the radio
spectrum to broadcasters (about the same as the Clinton administration
expects to raise from this auction.)"

So, it looks like our Rep/Demo friends in Washington have plans for
the spectrum and I doubt our interests will prevail against "revenue".

Anyone know more details on this auctioning plan?

Recently I unsubscribed to rec.amateur.radio.policy because I saw the rhetoric of certain members of the close-minded anti-code-test faction was becoming more and more enraged. Not wishing to push anyone to more violent behavior by the logic of my arguments, I unsubscribed to the rec.amateur.radio.policy group. In parting, I stated that I believed that certain of the antis (short for anti-code-testing) were in danger of substituting violence for logic. Of course, Mr. Stevenson stepped forward to deny this, and I quote:

"Yeah, those pro-code guys are always SO objective ... never once was there anything in any of the no-code advocate's statements that even remotely hinted at any sort of violence ..."

Contrast the denial with the Kevorkian type post above and you will see the truth of my statement, and just how rabid this man becomes when politely asked to provide proof to substantiate his wild assertions.

73,
Jim - AD4VL

One thing to keep in mind at flea markets if you're shopping for electronics:

If you are at Mom & Pop's Flea Market and something doesn't work, you're better off buying it because chances are it's just a blown fuse or something easy.

If you are at the MIT Flea Market, assume that the sellers know a fair bit about electronics and it REALLY doesn't work. Then you buy it for parts. (Granted, if you can't test it and they don't indicate its' condition then you're stuck).

It's all a gamble and sometimes you come out a winner and sometimes you're stuck with another electic gizmo to gather dust in the workshop until your wife makes you clean it up and finally throw it away. (And don't accuse me of sexism... I am the daughter of a collector from hell and the wife-to-be of a physicist with a weakness for useless gadgets that don't work. SOMEBODY has to "encourage" the removal of gadgets... so there's room for new ones!)

:) Chris

>of those of us who consistently work DX using CW, when SSB is not getting
>through because of poor band conditions! What a crock!

What is a crock is that you can only come up with SSB as an alternative to CW. All that demonstrates is that your experience is limited to antiquated and inefficient weak signal methods.

Two systems commercially available to amateurs, Clover and PACTOR II, are far better than CW under hostile conditions. PACTOR II will work at a CNR of -18 db. You can't hear that. To the ear, all you'd hear is noise. But PACTOR II busily prints out error free text at that signal level. The military has systems that can work with a CNR of less than -40 db. It is the rare CW operator who can maintain 20 WPM at even +10 db CNR. So these systems are 28 to 50 db better than what CW operators can manage.

And that's just the tip of the iceberg. Amateurs have been lagging in this area. The military has systems far better than either Clover or PACTOR II, and there are systems developed by Lowfers which are better too. 20 years ago, NASA started using systems which are better than either Clover or PACTOR II. These methods are neither new nor exotic.

You make Carl's points for him by being ignorant of these methods. And worse, by lashing out in your ignorance, you demonstrate that you are not even interested in finding out about them. As Carl has charged, you live in a time warp, and want to stay there. Well, it is said that ignorance is bliss, so you must be very happy.

5337. FS:12V Power Plug:Kenwood,Icom,....

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-17 00:00:00 UTC
From: n2cjj@ibm.net
Message-ID: <545m0e$21i0$2@news-s01.ny.us.ibm.net>
Source record: 214634

I have found a source for those DC power cord plugs. The ones I've got
have 6 pins, male plastic with metal female (barbed) inserts.

The plug fits most 12VDC HF radios:
Icom 720, 735, 706.. and alike, newer Yaesu models and Alinco DX70.
Kenwood-TS120, 130, 140..430, 440, 450..850,..TS50,60, 660, 670...and
alike.

Make your own power cord yourself, YOUR WAY!
Crimp or solder, long or short, heavy gauge wire, purple with
polka-dots...

I'm offering the 6 position plug with 6 inserts for $4 each,
or a deal 3 for $10. All prices include postage in the US.

To order, kindly send a check to:

R. Langston
286 Hudson Street
Cornwall-on-Hudson, N.Y. 12520

You can also email me for info at: n2cjj@ibm.net

It's a great deal if you use one rig at home, in the car and at work
and
are stuck dragging one power cord all over....

I still can't believe AES, HRO and others get $30 for a power cord.
HiHi!

In article <sschmitt.9.3263B895@ge-serveur.insa-lyon.fr> sschmitt@ge-serveur.insa-lyon.fr (Sebastien SCHMITT) writes:
>Hello!
>
>I am interested in direct AM demodulation (without IF).
>Has anybody experience with it?
>Any advice or suggestion of book would be welcome.

There are a couple of ways to do this. The less satisfactory method is called TRF. This uses gang tuned selective RF amplifiers to select the desired signal followed by ordinary diode detection and AF amplification. Many of the earliest AM receivers worked this way. At VLF and LF, it can still be a practical way to build an AM receiver. At MF and HF, it becomes difficult to achieve sufficient selectivity and stability for this approach to be satisfactory, though some modern components make this easier than it once was.

A better method is called synchrodyne reception. An advanced varient of this technique is called an I/Q receiver. A local oscillator, phase locked to the incoming carrier, is used with a pair of balanced modulators to recover the original audio modulation from the signal as I and Q phase quadrature components. These are combined to reconstruct the original audio modulation. If implemented properly, this method is very robust in the face of noise, fading, and interference, and is the best method of AM reception.

The I/Q technique is very powerful, and can be used to demodulate other modulation forms beyond AM. It can work as a method of single signal reception for SSB or CW, and it can handle FSK, PSK, and other M-ary modulations as well. Several of these have properties which are much more robust than plain AM.

A simple somewhat synchrodyne-like receiver is called a direct conversion receiver. In this design, the local oscillator is not phase locked to the incoming signal, so very careful tuning is required to get acceptable audio recovery from an AM signal, and frequent retuning may be required to maintain it.

Qnly a single balanced modulator is used for detection. This gives 6 db less gaussian noise rejection than the better method, and also doesn't offer single signal reception for SSB or CW in the face of interference

signals on the opposite sideband, nor does it allow
direct demodulation of FSK, PSK, or other M-ary
modulations.

On the plus side, a direct conversion receiver is simpler
than a fully synchronous receiver since it doesn't have a
coherent phase locked local oscillator, and it lacks the
second balanced modulator and phasing networks needed to
process I and Q. This simplicity comes at a cost in performance
and flexibility, of course. A direct conversion receiver is
usually not very satisfactory for AM, because without
synchronous lock, the AM sidebands recombine with incorrect
relative phase, and harsh distortion products are generated.
The DC receiver does work fairly well for SSB and CW reception
on uncrowded bands, however, since they don't require recovery
and recombination of two symmetrical sidebands.

For AM-only reception, I recomend either the TRF or the
fully synchrodyne design if you don't want to use the
superhetrodyne technique. Both of them can offer greater
fidelity than the superhetrodyne method, and I/Q technique
offers several other advantages besides.

5339. A TELNET DX-Oriented Prg: The Global DXCluster

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-17 00:00:00 UTC
From: vmi@vmi.it
Message-ID: <545nj4$1el@qualcuno.nettuno.it>
Source record: 214636

Hi dear OMs and TNX for reading my msg.

Recently, I see that many OMs (me included),
access DXclusters via Telnet with dialup line.
This is great indeed but common telnet applications,
obviously, were not designed for us but fore more general
purposes.

I'm currently developing a DX-Oriented Telnet application for
Windows and Winsock 1.1 compatible TCP stack.
My targets are:
-A split tx window with recall of sent lines (*)
-A keepalive feature to avoid timeouts (*)
-A Copy/Paste feature allowing to send large messages
or bulletins in one shot (*)
-A data link to DXHUNTER which is an application that
performs alerts on New Ones (*).
-A DX-Spot window where to collect the last DX-spots
-A Talk window where to place incoming talks apart
-Automatic connection/reconnection (in case of accidental
disconnections) to the selected cluster via an unlimited
number of intermediate nodes
-An automatic talk reply function that automatically answers
to incoming talks when NOHERE.

Note that the function marked with (*) have already been
implemented and work perfectly in my tests.

This application will allow you to get the best from one
(or more simultaneous) connection to a DXCluster,
with continuous connection monitoring and resume in case
of disconnection.
In a few words: the Global DX Cluster.
(in the last tests I connected simultaneously to 10 different
clusters all over the world without problems).

You might find this not so useful because it requires at
least a dialup line and an Internet subscription, or just
because you use TNC+radio to reach your local cluster;
but I believe that the DX-Telnet could be a good idea also
for rare cases (such as contests) when you may desire to
have a clean, quick and strong connection to the cluster,
avoiding traffic delays and disconnections.

Please let me know if you're interested in such a project:
I want a direct feedback from you, with new ideas and

opinions.
If I get encouraged, i'll make further developments to
the "DX-Telnet" and maybe will make your DX-life a little
bit happier and easier!

73 & GD DX de Fab

>experience as well.

I won't presume to speak for Carl (and we might not agree anyway),
but I think the WAN model is an appropriate way to think about how
we interact on our amateur bands. This goes beyond digital modulation
versus analog modulation and delves into areas amateurs infrequently
consider. The WAN model applies because we don't operate in isolation.
Everything we do affects others, and everything that they do affects
us. In the WAN model, we attempt to work together in ways that maximize
the utility of the WAN for *all* users, not just for our selfish
purposes. Though as part of the aggregate, we will ultimately benefit
as well.

This sort of thinking comes naturally to digital networkers, but is
somewhat foreign to analog operators. There are many cooperative
strategies used in WANs to maximize aggregate throughput. Few of these
are employed by amateurs operating analog modes, but many of them
should be. When we throw that wire in the tree, we should consider
that we are joining a worldwide WAN, and carefully consider the
impact of our operations on others. If we use the proper strategies,
our presence on the WAN will contribute to the aggregate throughput
in a positive manner. If we use improper strategies, we'll reduce
aggregate throughput, even if our own selfish purposes are served.

Subject: CAP Forbids use of Amateur Radio?
From: Joe Giraudo <giraudo@sierra.net>
Date: Wed, 16 Oct 1996 14:34:44 -0700

The latest issue of World Radio includes an article in the Search and Rescue column that states that the Civil Air Patrol now forbids its members from using Amateur Radio for any CAP operations including Search and Rescue and Emergency operations.

This is supposedly outlined in the new Communication Regulations recently issued. Is this true?

Well, in your previous post you said:

"I'd like to see the dealers at the MIT flea market be held to this sort of
policy. If people don't have ethical standards, I say *impose* some on
them."

a.) Since your clearly reccomending that we *impose* ethical standards on
the MIT flea market vendors, The question of how you planned to do it would
certainly be in order.

b.) I don't plan on thinking just a *little* bit harder about how we could
implement such a policy, it's an absurd thought to begin with.

Tim, ka8ddz

Actually, send the Webmaster at the ISP of the poster a message. A nice,
calm message, asking them to have their client quit posting spam across
many NG's. Explain that the subject matter doesn't match the NG AND that
what the poster is doing is ILLEGAL! I did this on several occasions, and
each and every time, I got a response from the ISP stating that the client
has been notified and warned. This is the only way to put an end to these
type of messages.

That may be true. It's quite good at keeping all of the engineers, computer enthusiasts, and "rocket scientists" out of the hobby.

Engineers that could be working on the "next big thing" in communications. People that can be working on our digital networks, getting them above the pitiful 1200 baud (or 300 baud on HF) that they are running at now. People that do more than litter their walls with 4x6 cards, and driving non-Americans off the band with endless "You're five by nine.. what was your call and name again?"...

> If we eliminate the CW requirements, you will soon be able to pick up
> a license at Wal-mart, along with the latest appliance operator
> special.

And what's the problem with "appliance operators"? Are every one of your rigs completely home-built? I doubt it. I don't know about you, but I could design and build a radio with all of the features in the standard "appliance" rig, but it would not be nearly as small, and would probably cost more to build than to buy.

As for being an effective gateway.. simply look at 20m. Every legal US op on that band has passed at least a 13 wpm code test, and it's far worse than anything else I've heard.. including CB.

Maybe Wayne is right... CW does rot the brain.

> CW FOREVER!

Don't you mean "SPARK FOREVER"? All of your arguments are old rehashes from that argument.

Before you go running and looking up my call, I was licensed KA3HPO in 1981, and upgraded to (full element 3) Tech N3EOP in 1985. I support the movement to drop the General code requirement to 5 WPM, and eliminate the "coded-Tech" classification. I have passed the 4A and 4B sections, but the only reason I would even consider getting my Extra is to shut up those people that claim that I want a "free ride" into the HF bands. What good is a free ride if it doesn't go anywhere you want to go?

de N3EOP/6

: Well, technically, you probably can't. As best I remember (CATV guys
: help me out here), the frequencies used by cable tv are:
:
: 82-88 ch. 6
: 88-108 FM radio (untouched)
: 108-118 Aircraft aids to navigation (Noone dares to touch!)
: 118-124 ch 14

Not exactly true. 88-118 MHz is used by cable; they are designated
as "A-1" to "A-5". (Took me a while to realize that's A MINUS ONE
instead of A DASH ONE.) (Channel 14 is officially called "A".)

Specifically, many cable companies use those channels for pay per
view or other addressable/scrambled signals. A-1, at 112-118 MHz,
is very common, and receivable on most cable boxes as channel 99.

Many amateurs, collectively and individually, did come to such a conclusion
rather early on. There were others, however, who were still obsessed with
the mere fact of contact, and their spiritual descendants continue to be
so obsessed even to this day. They are figuratively caught in a time warp,
stuck repeating what their ancestors have already done, IE rubbing two
sticks together to make fire over and over just to see if it still works
the way it did yesterday and the day before that and the day before that
ad nauseam. This isn't all bad when it leads to better equipment designs
and better station installations, but it isn't all good either, for example
when it leads to the poor operating practices so often found among the Dx
and contest crowd.

>I think that Amateur and commerical stations were often on equal terms

>dropped.

One of the major reasons amateur stations were often superior to
commercial stations was the Marconi (and others) patent battles.

Amateurs were using techniques the commercial stations couldn't use because they were hamstrung by legal wrangles. This is rather well documented in the histories of early radio. Amateurs were often one to several steps ahead of commercial practice because the lawyers didn't think that they were big enough fish to fry.

Even as late as the start of WWII, amateurs were often better equipped than commercial or military stations. Amateurs weren't always leading innovators, but they were certainly first adoptors with a vengence. Any time they became aware of a new circuit, whatever its source, they were adding it to their stations, regardless of any patent considerations. So they might have one circuit developed by commercial firm A tied to another circuit developed by commercial firm B driving a third circuit developed by commercial firm C. They weren't inhibited by legal restrictions to just ideas that they developed themselves.

That stopped to a large degree in the latter 1950s when amateurs became dependent on prebuilt equipment. The manufacturers of that equipment were also the suppliers to the commercial and military markets, and amateurs no longer quickly adopted new circuits and ideas but rather depended on the manufacturers to do it for them and deliver the same sorts of packaged solutions that they were delivering to commercial and military customers, but often in stripped down form due to the notorious cost sensitivity of amateurs.

You think maybe that traffic handlers operate in a perfect environment?

>When I talk about
>contesting skills being applied to emergency operations, I'm not
>talking about a bunch of people trying to fight to become the

>net control station.

Neither am I. I'm talking about people following the net control
station's *instructions*. I'm talking about people whose first
impulse is *not* to form a pile up. I'm talking about people whose
first impulse is to aid *as necessary and instructed* other stations
to pass their traffic, but to otherwise keep their mouths shut and
their ears open.

>Rather I'm talking about operators who know how
>to exchange information under adverse conditions.

But of course they don't do that, or at least the information exchanged
is so minimal as to not matter. Dxers and contesters simply do not get
the practice passing *content* that is required for efficient emergency
communications.

>In an emergency situation you can't always count on good conditions or
>cooperative Amateurs sharing the band. Due to power outages the
>signal strength may be low, so being able to copy weak signals in
>adverse conditions can be of help. Pactor you say? Sure, that would
>work great and should be used when possible. But this is an
>emergency and that mode might not be available so having some other
>skills is a benefit.

One of the more important skills is knowing when and how to obtain
relay support so that you *don't* have to pass information at very
marginal levels. This is something the contester and Dxer never does,
but is a routine part of traffic handling in emergency and non-emergency
situations. Again, it is a matter of cooperation rather than competition.

>> Emergency communications revolves around getting everyone's
>> message content delivered promptly and accurately in a properly
>> prioritized manner. That requires tight channel discipline and

>> last time you heard a contest operator offer to relay the contact
>> information of another station? Not only would it not be allowed
>> under contest rules, but if it were it would hurt his own
>> competitive position. Yet that is exactly what a traffic handler
>> would automatically do.
>
>Yes, relaying exchange information is not allowed because the
>point is trying to make contact with the other station directly.
>Because of this there is encouragement to build better stations.

But direct contact is often the least efficient way to pass traffic
in emergencies. The primary skill of cooperation can mitigate poor
conditions or poor stations as noted above. Not that I'm advocating
that potential emergency operators should want to have poor stations,
but that their emergency operating skills can help them get around
that problem if it does exist.

>> As the twig is bent, so grows the tree. I would suggest that

>shut until I have something important to state or the net
>control op asks a question. And don't think I'm the only one
>who can do this.

And that's a very valuable emergency operating skill indeed.
Would you have it if you didn't provide public service communications
on a regular basis? I doubt it. In other words, you've learned an
important emergency operating skill *despite* having operated in
contests, not because of operating in contests. IMHO that's rare
among avid contesters.

>> WARC bands.
>
>Who shall decide the allowed percentage of the band to be used for the
>contests? For other activities it's first come, first served. Why
>should contesting be any different?

Because the contest sanctioning body makes the rules?

It is precisely because contesting is organized that it generates
so much chaos on the bands. If each individual decided by himself
when to contest, and under what rules to do so, there wouldn't be
the band killing concentrations that organized contesting fosters.
IE I might decide to work Sweepstakes on a Wednesday morning instead
of a weekend if the contest sanctioning body didn't insist the contacts
be made on the weekend, and another operator might decide Thursday
afternoon was a good time for him. That's how other activities are
done, but not contesting. Contesting is concentrated havoc whereas
other activities are distributed more randomly and evenly. And that's
a choice made by the contest sanctioning body.

I don't have a good answer for what to do about contests. Cummulative
contests have some features that make them better sharing partners
because they spread activity over a greater time. OTOH, sprints limit
the duration when the bands are unusable by others. Both have their
pluses and minuses. Single band and/or single mode contests limit the
problems for other bands and/or modes, but they totally wreck the band
and/or mode of the day. OTOH, any band and any mode contests spread the
load and aren't as disruptive to any particular other activity. Pluses
and minuses again.

Contesting is disruptive, and it is disruptive almost every weekend.
Something should be done about that. I don't know exactly what, but

some creative thought by the contest sanctioning bodies might come up with better solutions than what we have now. For example, and I don't know how practical this might be, the organizers could have a rule that no station participating in the contest could operate for more than 10 minutes out of every hour on a given mode or given band. Or they could say that contacts this hour only count with stations having the same first letter in the suffix of his call as yours, etc. Surely there is some way to dampen the peak loads so that the bands remain usable by others.

Or, how about this? Lets have a new entry class for contests. This class is for stations who listen only and provide reports of stations transmitting over non-contest stations. Each report would be worth 1 point to the reporter, and would result in 10 points being subtracted from the score of the station reported. I bet we could get a lot of stations to participate in that, I might even be tempted to submit a log, and it might do wonders for the operating manners of contesters. Bet a lot of them would wind up with negative scores. :-)

5350. HRO purchases Tucker amateur radio business

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-17 00:00:00 UTC
From: thompson@atl.mindspring.com
Message-ID: <5461n1$a1e@camel0.mindspring.com>
Source record: 214647

Here is a press release direct from HRO on the Tucker purchase:

FOR IMMEDIATE RELEASE

PRESS RELEASE

HAM RADIO OUTLET PURCHASES HAM RADIO ASSETS OF TUCKER ELECTRONICS OF TEXAS OCTOBER 16TH 1996.

Ham Radio Outlet, the world's largest Ham Radio Equipment dealer, announced today it had agreed to purchase substantially all the Ham Radio Equipment assets of Tucker Electronics and the Ham Radio assests of Oklahoma Comm Center which was aquired in July by Tucker.

Ham Radio Outlet will not be occupying the current Tucker store location as all Ham Radio sales activity at Tucker will cease on October 16th.

Ham Radio Outlet plans to consolidate Tucker's retail and mail order operation with Ham Radio Outlet's New Hampshire store location. Tucker's 1-800-559-7388 telephone number will be answered by Ham Radio Outlet's New Hampshire store at this time. Ham Radio Outlet will continue to market the "Tucker" Brand of accessories.

Ham Radio Outlet will be aquiring new locations and will announce plans shortly.

For further information contact:

Bob Ferrero, W6RJ
President HRO

>Oh? How big are your cells? ;-)

Well, from here on UHF, about a 20 mile radius. That would
encompass 3 other amateurs who *might* be interested in operating
SS. I told you the network is sparse.

>How did you arrive at that number?

2^11, that's approximately the number of discretely correlatable
states available with the allowed spreading sequence generators.

[snip]
>But Part 97 states...

> 19 19, 5, 2, and 1

These are definitions of spreading sequence *generators*.

>If you are going to use the shift register's output in
>a parallel manor as a WORD to select an OFFSET into a
>frequency look-up table (the table itself can be varied),
>then you get quite an assortment for frequency hopping.

>
>So it looks to me like we only have THREE (count 'em)
>pseudo-noise streams. Furthermore, and to quote the
>ARRL handbook, "these three sequences are the only
>ones that amateurs are allowed to use."

Yes, but why do you assume that every station will be in the
exact same *part* of those three sequences at the same time?
Stations operating in different parts of the sequence are
uncorrelated with each other. Typically, a separation of
3 bits in the time sequence of the stream will sufficiently
decorrelate the stream so that two stations can share the
same center frequency.

>> Have you *tried* using the spreading codes we're allowed to use?
>
>I'm curious. Which PN streams have YOU *tried* ??

I've used all three sequence generators for DS. I haven't yet
played with FH. I've operated two pairs of stations using the
same sequence generators without conflict. That's because the
pairs weren't in the same *part* of the sequence at the same
time.

You can tune through a sequence just like you'd tune through
a band of frequencies. If you lock to a station you don't want
to copy, just bump the generator and recorrelate on the next
station down the sequence. The three sequences we're allowed
are actually like 3 separate amateur *bands* that we can tune
across and use for every center frequency that we choose.

The choices are sufficiently limited to remove real LPI from
our activities, which makes NSA happy, but they offer sufficient
freedom to accomodate large numbers of amateurs in any given
area.

HAM RADIO OUTLET PURCHASES

ASSETS OF TUCKER ELECTRONICS

AMATEUR RADIO BUSINESS

FOR IMMEDIATE RELEASE

FOR FURTHER INFORMATION CONTACT

John F. Holloran, Jr.

(214) 348-8800 x8363

jholloran@tucker.com

DALLAS, October 16 - Tucker Electronics Company, a distributor of new and
reconditioned electronic test & measurement equipment, amateur and
shortwave radios, and electronic hobbyist products announced today it had
agreed to sell substantially all of its assets related to its amateur radio
business to Ham Radio Outlet ("HRO").

Tucker Electronics has discontinued operations of its retail store and
consumer mail-order business, and the company will immediately begin to
transfer the purchased assets to HRO's stores. Tucker plans to market its
vintage radios and any inventory not acquired by HRO on its website
(www.tucker.com) in early November.

The sale of its amateur radio business will allow Tucker Electronics to
focus on its core business, distributing new and reconditioned electronic
test & measurement equipment.

No, for the government to resstrict rights by requiring a license to do
something, there must, of necessity, be a reason to do so ... that
reason being the public interest, necessity, or safety.

>For
>instance, many have advocated that welfare recipients be made to work

>for receiving welfare. If the government mandates a "work ethic" for
>ham radio, it is indeed a relevant "work ethic" requirement.

There is a big difference between receiving a check from the government
(which comes from my paycheck and yours as taxes) than being permitted
the use of a public resource which is regulated in the public interest
by the government.

Hams are SUPPOSED to "pay back" society for the use of our vaulable
spectrum allocations by performing public service and by learning and
training ourselves to be better in terms of technical knowledge and
skills.

>> The current system sucks ... it has created an "upper class" of

>Recently I unsubscribed to rec.amateur.radio.policy because I saw the
>rhetoric of certain members of the close-minded anti-code-test faction
>was becoming more and more enraged.

You thought we were getting enraged because we demanded that you stop
twisting and lying about things we had said (or things we had NOT
said)???

>Not wishing to push anyone to more violent behavior by the logic of my
>arguments, I unsubscribed to the rec.amateur.radio.policy group.

First, there was never a shred of "logic" in ANY of your arguments ...
that's why we were getting so frustrated with you ...
HOWEVER, don't flatter yourself with the idea that YOU had any "power"
to "push" any of us to anything ... let alone violence ...

>In parting, I stated that I believed
>that certain of the antis (short for anti-code-testing) were in danger of
>substituting violence for logic.

Right ... what did you think we would do (over the internet, remember)?
Were you afraid we might resort to the use of "violent" words like
"whack", "bang", "zap", "bang", and (perhaps) "crunch" ??? GIVE US A
BREAK!!!! TRY TO GET SOME GRIP ON REALITY, JIM!!! YOU'RE REALLY LOSING
IT ...

>Of course, Mr. Stevenson stepped forward to deny this, and I quote:
>
> "Yeah, those pro-code guys are always SO objective ... never once
> was there anything in any of the no-code advocate's statements that
> even remotely hinted at any sort of violence ..."
>

That's right, never once was there anything ...

>Contrast the denial with the Kevorkian type post above and you will see
>the truth of my statement, and just how rabid this man becomes when
>politely asked to provide proof to substantiate his wild assertions.
>

Jim ... I stand by my denial of any hint towards doing, or advocating that anyone else should do, violence on anyone else ... there is NO truth in ANY of YOUR statements ... you clearly have little or no grasp on reality ... and YOU are the one who is dogmatic, rabid, paranoic, and fanatical in your attacks on anyone who disagrees with you by pointing out the flaws in your "logic" and the errors in your "facts."

I never said that anyone should do any violence to anyone else .. what I said above, which you took out of context, was simply that the person to whom I wrote it was expressing an opinion and a view of life so devoid of any vision, goals, or hope for the future that accepting that view of the future was essentially the same as ending it all ...

Your zeal to twist anything that (I or) any (other) no-code advocate says into something evil is so outrageous as to be completely transparent to anyone with any sense at all ... of course the corollary to that is that you're completely incapable of understanding just how ridiculous and outrageous your rantings have become ...

5358. Spark Transmission Again!

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-17 00:00:00 UTC
From: Jim Reid <jreid@aloha.net>
Message-ID: <01bbbc73$c2c87a80$84070ccf@jim-reid-1>
Source record: 214655

From a new ARRL bulletin:

SB SPCL ARL ARLX018
ARLX018 Oldest LW transmitter

The world's only working Alexanderson alternator will broadcast this month from Sweden on 17.2 kHz. A nostalgic Morse code transmission at 0900 UTC on October 23 from station SAQ in Grimeton on Sweden's west coast will commemorate the declaration of the radio station as an historic building. The RCA Alexanderson alternator was built in 1924. The SAQ site, complete with six antenna towers and the 200 kW transmitter, are under the care and management of Telia Mobitel, a Swedish mobile telephone company, and the radio museum of the Radio Historical Society of West Sweden, which operates club station SK6RM. Ulf Sjoden, SM6CVE, has helped to organize the event.

SAQ also will transmit a test on October 21, at approximately 1100 UTC. SAQ requests listener reports of both the test and the commemorative message via telephone at 46-340-74251 or fax at 46-340-74195. Callers will be reimbursed for the cost of the call. The operator at SAQ is Bengt Dugaas, who is not a ham.

The Alexanderson alternator was developed during the early years of wireless by Ernst Alexanderson, a Swedish-American. The device is essentially a large, electromechanical high-frequency alternator with a high-speed rotor that's connected directly to an antenna system. A similar station once operated on Long Island. The circuit was used to transmit telegrams and messages between Europe and the US.

Last fall, Amateur Radio station 7S6SAQ operated from the SAQ site to celebrate 100 years of radio and the 70th anniversary of the radio station (see ''Up Front,'' QST, Nov 95 , p 14, for a picture of the Alexanderson alternator and the antenna system). During September 1995, SAQ itself transmitted a message to England which was relayed via landline from a BBC monitoring station to those attending a ''100 Years of Radio'' conference in London.

>

Jim ... all one has to do is look/listen to the bands ... there is no way to dispute the fact that the vast majority of the technology in use dates back to at least the 1950s ... some of it (Morse code) to the early 1800s ... ham radio has been left stagnating in the past as the rest of the world has strode forward in great leaps and bounds ... the fact that you have no understanding of (or desire to learn about) modern communications technology does NOT change the reality that you refuse to accept ...

>> We will always have to "stand on our own two feet" in the regulatory
>> sense on the basis of providing public interest payback
>
>Ham radio is a hobby with a public service aspect.

No ... despite your aversion to reality, we are a service with a hobby aspect ... see Part 97.1 ... try reading and learning something for a change ... I know it's harder than spouting off with no idea of what you're talking about (your normal mode of operation), but you really should try it ..

I actually read an article in Newsweek that this type of thing is true and
legitimate! I figure it's worth a try!

M. Hache wrote:

Everyone seems to be making money on the net these days. If you are
reading this I assume that you have decided that it's your turn. The
opportunity that will be described here is a PROVEN MONEY MAKER and
it's perfectly LEGITIMATE AND LEGAL. So if you are ready to make some
money read on, you have everything to gain..... Save this article to
a file on your hard drive because you will need it later.

I came accross this opportunity in one of the news groups. I read the article that was posted (very similar to this one) and thought that it sounded too easy. There had to be a catch. I checked with a friend of mine who happens to be an attorney and she assured me that it was perfectly legal with no catch as long as I followed the rules which are spelled out below.

It will cost you five dollars to try this out but believe me you will make it back 100 fold. Just for the sake of saying it, you will not be sending the five dollars to me. Honesty is a must for this to work so follow the rules to the letter and in a few weeks you will be amazed at the results. I sure was.

These are the rules:

1) Take five sheets of paper and write the following on each one: 'Please add my name to your list' include your name or the name of your business and your mailing address. In this way you are asking the person who receives the sheet of paper to perform a service for you which will be explained as we go through the rules.

2) Now take each sheet that you prepared above and fold it around a one dollar bill (Please use U.S. currancy). Do not send checks or money orders. In this way you are paying for the service you have asked them to perform from step one. By folding the paper around the dollar bill you will insure its arrival at the intended destination.

3) Take each of the requests for service along with the one dollar payment for the service, place them in five envelopes, and send them to the five people listed below.

4) Read this step carefully. Remove the first name from the list of five names below. The name in position 1. Move the other four names up one position so that the name in position 2 is now in position 1, the name in position 3 is now in position 2, and so on. Place your name and address in position 5 (the last position on the list). When doing this do not use a word processor. You must leave this article as a straight MS-DOS text file so anyone recieving it can read it.

5) Now upload the updated file with your name in position 5 to as many news groups, and bulliten board message areas as possible. Give it a catchy description like "NEED CASH....FAST ??" or "PAY OFF YOUR DEBTS IN 90 DAYS", or "NEED CASH FOR THE HOLIDAYS ??", etc. The more uploads you make the more money you will earn.

6) This is another VERY IMPORTANT STEP. When someone sends you a dollar requesting that you add thier name to your list you must perform the service requested. All you need to do is save all the sheets of paper requesting to be added to your list in a folder (your list).

7) What do you do with your list? As time allows take the names and add them to the list below 2 or 3 at a time to the bottom most positions

like 3, 4, and 5. Put yourself in position 2 or 3 and upload that article. In that way we all multiply the number of times our name appears and we perform a legitimate service. Be sure to continue to post the original updated article as well with the names as they appear below and your name in position 5.

If you need help uploading just ask someone in one of the news groups or the sysop of the bullitin board and they will explain how it's done.

You can expect to see a little money start to trickle in at around 2 weeks, but around weeks 3 and 4 WOW!!

8) When the 'money storm' hits your mailbox go pay off your bills and debts, and then go get that something special that you've always wanted, or for your love ones.

HERE IS THE LIST OF NAMES:
Position 1: Amir
8 Hanurit Street
P.O.Box 154
Kochav-Yair 44864
Israel

Position 2: Richard Fitzgibbons
913 Maple Lane
Lebanon, PA 17046
U.S.A.

Position 3: G. S. Interprises
P.O. Box 570
Fairmont, MN 56031
U.S.A.

Position 4: Michael 001
11-9, Ross Ade Dr.
West Lafayette, IN 47906
U.S.A.

Position 5: Yoav Kessler
Yehouda Halevi 25 St.
Herzelia 46490
Israel

HONESTY is what makes this work so do send the request for service and the one dollar payment for that service to the five people on the list. I invested the five dollars and it payed off big time because now the five people I sent to are all helping me get this posted with my name on their lists. If we all play fair the results will speak for themselves.

Set some kind of a goal like 15 or 20 posts or more every couple of days. Make sure it's a goal you can achieve. One last thought, keep track of how much you make because you will need to report it as income for tax purposes.

Just for fun you might also include on the sheets of paper the position
that person was in when you got this article,

You might want to keep this letter in a secure place, so that you can use
it
again sometime in the future.
Sit back and start enjoying your life. Life is short, play hard!!!

Oh yes, this is the one! I once bought a cd player for $50 that
didn't work. My life is OVER!!!! But then I got a sound card
with a Jazz 16 chip for $4 that works!!!! From the same guys
that were selling the maxxum external 28.8 modems for $10 (3 for
$25).

I love this flea market, but I hate the increase in admission
fees. I have two kids who always want to go (my daughter drools
over those soapstone animals and the lapel pins), and sometimes
I wonder if it wouldn't be worthwhile to just buy a seller's
ticket and troop the whole group in. God knows, *I've* got a
few old 286 boards and other odd junk that I could sell...

Oh, hey, and I bought a 3-button logitech jeep mouse (Natick Army
do-dah surplus) for $2.50 one time, that is still working!!!

Oscilloscopes for $25? What do you want one for? At those
prices, who cares? Old Commodore 64's? I liked showing my
daughter all those old CP/M Morrow and Zenith computes one guy
was selling, not to mention the Osbornes! A history of personal
computing, before your very eyes!

And my son bought a beautiful piano amp for $20 one month, that
works like a champ (he uses it to power his bass guitar).

>
>I'd like to see the dealers at the MIT flea market be held to this sort of

Xochi, don't buy anything. It's that simple. Sure, we'd like
everybody there to be on the up-and-up, and to stand behind
what they sell, and not everyone does. If you buy it as-is,
where is, you take a chance. Hey, last month I actually saw a

dealer give back the money a guy spent the month before on some item (I forget what) that didn't work.

Ok, now I'm completely confused. WTF has ethical standards at a flea market
have to do with a vendor bashing in my skull, what does this mean?

>>b.) How do you intend to *impose* your ethical standards on anybody?
>
> All I know is that I'm not SCSI.

What is SCSI? I've never hear of it.

>>c.) I haven't found a flea yet that you couldn't find 120VAC SOMEWHERE, If
>>your spending more than a hundred dollars or so test it out before you
buy.
>
> If they let you test... a lot of these scumbags won't.
>
> - Xochi

Then don't buy from the *scumbags* dummy, let someone else buy it. If you
know enough that you could fix whatever your buying great, otherwise let it
go.

I was going to sent this as private e-mail to Gary and Kevin, but what the hell, the pro-coders will *never* believe that they actually read a post where *I* was actually playing "the peacemaker", so here goes:

In <326783EC.3DE@mail.mei.com>, Kevin Jessup <kevin.jessup@mail.mei.com> writes:
>Gary Coffman wrote:
>
>> >Oh? How big are your cells? ;-)
>>
>> Well, from here on UHF, about a 20 mile radius. That would
>> encompass 3 other amateurs who *might* be interested in operating
>> SS. I told you the network is sparse.
>
>You know, this type of reasoning is truly amazing!!!
>We have an incentive system catering to HF and Morse.
>Add to this rules and regulations that PREVENT a dense
>SS network. And then you say we don't need rule
>changes because our networks are sparse! Big news
>everbody! Our networks are SPARSE!!!! Can ya believe it!!??

Boys, boys, behave now!!!

Kevin, I think it's safe to say that Gary is actually "on our side" ... he's just gotten hung up in arguing that useful things *can* be done today without waiting for rules changes, and to a degree he's right. He's is frustrated with waiting and simply wants to encourage any and all to do whatever is possible within the current, antiquated rules, rather than waiting for new, more reasonable rules to begin to do anything.

Kevin, having not spent as much time as Gary in trying to field networks (Gary's been in the trenches for years) I don't think you've had the same opportunity to experince the same frustrations and deal with the same day-to-day bullshit and logistical problems and so forth ...

I don't think Gary will accuse me of puttting words into his mouth if I say that I'm sure he wants, will support, and will be happy to see, more progressive rules regarding bandwidths, coding/spreading schemes, and a variety of other technical issues that presently "get in the way" for no good reason ...

>Hey Gary! You didn't suffer some severe head injury
>over there at Destructive Testing, did ya? ;-))

Gary's a smart guy and that wasn't called for ... he just sometimes gets so hung up trying to make a point that he has a hard time letting go ...

I know, I have the same tendency sometimes ... we technical types tend to be tenacious ... but so are you, Kevin ...

>> Yes, but why do you assume that every station will be in the
>> exact same *part* of those three sequences at the same time?
>> Stations operating in different parts of the sequence are
>> uncorrelated with each other. Typically, a separation of
>> 3 bits in the time sequence of the stream will sufficiently
>> decorrelate the stream so that two stations can share the
>> same center frequency.
>
>Your bullshit is reaching ever greater levels.

NO, he's prefectly correct ... while not as elegant as a full CDMA system with different hopping sequences, time offsets along the same spreading sequency can be used quite effectively ... and there are a number of ways to exploit this ...

>I guess you have no experience with syncing up on the
>receive side via a corallator circuit. With DSSS
>this happens in well under a second. This is because
>the receiver and transmitter PN streams are not at
>exactly the same data rate. This allows the two to
>eventually sync up and corallate. This sliding window
>is an easy way to sync up. But then you suggest we
>have multiple stations on different parts of the SAME
>sequence and all will be cool. But this means receivers
>will be syncing up on bit streams they were not intended
>to receive.

There are other ways to deal with the synchronization and separation issues ... again, perhaps not as elegant as other ideas we can envision under more liberal rules, but still quite doable TODAY ...

******

I strongly suggest that you both (Gary and Kevin) take notice of who our REAL enemies are and save the debates about whose ideas are most elegant, etc. until after we've won the MAJOR battles ... OK??? ...

We need you both ... and all of the lurkers who were beginning to mentally take sides between Gary's "do it now" argument and Kevin's "but there are more elegant ways" argument ... to pull together and try to acat as one body, so that we can win the war and accomplish the following primary objectives which are necessary to the future survival of ham radio:

1) removal of all code testing from U.S. licensing requirements (includes any/all necessary ITU Treaty changes or exceptions)
2) restructure licensing system to 2 levels (entry and regular)
3) modernize technical regs WRT bandwidth, coding/spreading, modulation, content, digital signatures, unattended/automated messaging systems, etc.

I think a 4th objective is probably of necessity:
4) break the stranglehold that the ARRL has on US ham radio regulation

******

>quality tends to be lacking. Proof of "you get what you pay for".
>Several owners reported high sensitivity but poor selectivity; others
>report the opposite. Rather low in overall quality control, but has an
>excellent "extended warranty" plan.

I've had good service from the three Alincos I've owned. They have
more intermod than I'd like, but they've been reliable. They aren't
quite top tier radios, but they aren't junk either. The mobile rigs
are quite servicable radios too.

>Yaesu: Also well made. Some find their HTs confusing to program.

I think that Yaesu makes some excellent radios. And I think the
FT-470 was one of the first HTs with a really user friendly
interface. OTOH, the FT530 was a complex thing to program. The
new FT51R and FT50R seem to be pretty easy to use, and tough too.
Yaesu also make what is probably the best HF radio, and a number
of good mobile VHF+ rigs, and the workhorse FT736R. Good stuff.

>Kenwood: Also well made. Kenwood has occasionally fallen for "creeping
>featurism", where they add things that aren't really needed. (Does
>anyone *really* need video games on their HT?)

I normally wouldn't use the term "well made" in the same sentence
with the word "Kenwood" if I were talking about their VHF+ equipment.
I would use words like "intermod", "baroque interface", "poor thermal
design", and "gameboy" with the word "Kenwood". I have a low opinion
of their mobile and base rigs (especially that horror the TS-790A).
Their HF rigs are pretty good though.

>Icom: Generally well made, solid engineering. The 2AT radio has a
>reputation for being virtually indestructable. Their high end radios

>hold their own against any others. Generally regarded as being in the
>same league as Kenwood and Yaesu, but a "hair" better (and more
>expensive).

I basically agree, though I think that their best HT was the IC2AT,
and they haven't made a HT since which can measure up to it, though
some of the newer ones excel in their own different ways. The IC2AT
was a true classic. Their other VHF+ equipment is also good solid
stuff, and their HF offerings are solid as well. The cute little
IC-706 has defined its own niche.

>Radio Shack: No dual band yet, but their single band HTs are of the
>"big and tough and you can drive nails with them" variety. Rumored to
>be made by Maxon, the radios have an excellent receiver. The only
>drawback (to some) is that they are ham-band only; no listening to NOAA
>or the cops on these. (No diode-cutting mods, either.)

I agree fully. This is a good tough basic radio, patterned after the
old IC02AT and IC04AT. Older Icom acessories fit it too.

>Standard: What I own, two, in fact. Outside of the US, Standard is
>"the" radio to own for commercial use; at the level we give to Motorola
>in the US. I'd buy another Standard if I was in the market for a third
>HT.

I like Standard, and I own one too, the little C508A. I wouldn't put
it in the league with Motorola, but it's a nice radio. The manual
isn't great, and it's a bit confusing to program, but it works well,
is incredibbly small, and is very easy on batteries. It's the perfect
accessory for a mobile rig that can crossband repeat.

>Before firing up the flamethrowers, please kepp in mind that this is
>just a report of unsolicited comments that I've heard over the air and
>in person. I don't report on specific models, since with the exception
>of what I have owned, I can't comment on them.

Well, I pretty much agree with what you said, except maybe about
Kenwood. I'd like to take this opportunity, however, to give my
standard speech about HTs as first and only radios. The HT is a
specialty tool, designed for foot mobile operation. It is not a
good substitute for a mobile or base radio. Think hard about how
you intend to use the radio before you make a decision. If your
operation is going to be mostly mobile, buy a real mobile rig.
It'll work much better from the vehicle than a HT.

HTs aren't derisvely called handi-scratchies for nothing. It
is painful to have to try to listen to someone trying to
participate in a discussion on the repeater when they're using
a handi-scratchie in the car. It's usually not a lot of fun
for them either since the HT usually doesn't have enough audio
be be heard well over the road noise, and there's usually a
tangle of wires to fight, connecting external antenna, vehicle
power, and perhaps a speaker mike to a HT that's flopping

around loose inside the vehicle.

If you're going to operate mainly at home, buy a base rig (or
a mobile rig and a power supply, and you can swap the radio back
and forth between car and house if you use quick release mounts).
The HT doesn't fill either of these roles well. Unless you're
primarily going to operate foot mobile, I'd advise not buying a
HT as your first radio. They make fine secondary radios for
specialty situations, but aren't usually a good choice as your
primary radio. (Lots of people are doing it, but it is still
a bad idea.)

>repeater (with the correct PL so my rig would break squelch) and the
>local one are keying at the same time will I get interference?

You bet. CTCSS is no magic bullet. It's just a squelch. It can't
stop two signals on the same frequency at the same time from
interfering with each other. In the case you describe, the squelch
probably wouldn't even open because the local signal would capture
the receiver and block it from detecting the CTCSS tone on the
distant signal.

Theory is great, but experience is better. However, I believe theory is on my side as well, in saying that CW is more effective in poor conditions than SSB. I realize that the word "virtually" you use above means you think "practically" anything is better than morse, but I think that is an unreasonable assumption. In fact, only a few modes in use today legitimately lay claim to being more effective than CW in poor conditions, i.e., PACTOR and that genre.

Best Regards,

Jim - AD4VL

> early 1800s ...

In the fifties, there was very little SSB, and a great deal of AM. Now there is a great deal of SSB and very little AM. There was a great deal of CW then, and there is a great deal of CW now. Even if one should grant that the modes in use then and now are generally somewhat the same, the underlying technology producing those modes is much advanced and improved. There are many hams interested in the modern digital modes, I am one of them. But the old stuff can be interesting, too.

> ham radio has been left stagnating in the past as the
> rest of the world has strode forward in great leaps and bounds ... the
> fact that you have no understanding of (or desire to learn about)
> modern communications technology does NOT change the reality that you
> refuse to accept ...

Your assumption that I have no understanding of modern communications technology is pure nonsense. I have been working with state of the art technology since 1960. Incidentally, Carl, we used your favorite mode, Spread Spectrum, in the government service back in the sixties. Just because the SS mode was used then, however, does not mean one is "stagnant" if one should use it today, because the underlying implementation of SS today will be better because technology has advanced dramatically. OTOH, I don't believe ham radio has been exactly left stagnating. Read the spec sheets on some of the newer ham rigs. They don't sound "stagnant" to me. They sound very modern. I believe the various manufacturers of amateur equipment have folded in the latest technology and implemented every technological advantage they can within financial limits. There are some superb communications sets available now.

> carl@ais.net

Well, I believe I do know what I am talking about. Suppose your job is delivering bread to grocery stores all day. At the end of the day, your boss says you have to log on the computer and enter your time worked, which takes about 15 minutes. Then you tell your neighbors that your job is to work at a computer. You don't mention that the majority of your time is spent delivering bread. Would that be accurate, when such a small percentage of your time is spent at the computer? Likewise, when 99%, or even 90% of a ham's time is spent in hobby pursuits, and 1% or even 10% is spent in public service, what is the primary usage of ham radio? The regulation mentions service, to emphasize the operations that matter to the government, but the regulators know quite well that emergency operation is only a small portion of the average amateur's time on the air. They permit our hobby activities so we will be operationally sharp when an emergency comes up that requires our services. When I said ham radio is a hobby with a service aspect, I was speaking with reference to how the majority of our time is spent in the hobby, not what the priorities are. In order of importance, Public Service is our reason for existence. Emergency services must always come first. However, when there is no emergency (the overwhelming majority of the time) we have a lot of fun with the hobby part.

A pretty naive view, Carl. The government, when it condescends to justify itself at all, often says (like "mommy" used to), "because I said so!"

>
> There is a big difference between receiving a check from the government
> (which comes from my paycheck and yours as taxes) than being permitted

> by the government.
>

Nope, sorry, the government can make the decisions those individuals in charge wish to make. In the case of the FCC, those decisions may be challenged, and often are, in Federal Court. However, I doubt the courts would override the FCC's morse code test requirement for amateurs, since it has been in effect for so long. If you think they might, go ahead and file a federal suit to get the FCC rule overturned.

> Hams are SUPPOSED to "pay back" society for the use of our vaulable

> skills.
>

A worthy goal, in principle. How much are we to "pay back?" How do we know when we have paid enough? How much public service, is enough? How much "learning and training" is required? How will we know when amateur radio generally has enough "learning and training" to justify our spectrum, and how will we prove to the FCC that we do? Your turn, Carl.

> >More petty jealousy and class envy. Note that these are Carl's

I certainly have enough intelligence to see through your preposterous allegation that those higher in class than Technician are "licensees who are, to a signicant degree, rooted in the past rather than . . . looking

towards the future and stagnating the service with their . . . insistance
on foolish rituals or antiquity." This statement of yours is pure
nonsense. I think very highly of my fellow ham radio enthusiasts. Unless
you can offer some proof for your assertions, you ought to hold off on
making them. Otherwise, please label these asseritons plainly as "Carl's
opinions."

> > I strongly dispute his

> radio has stagnated would require you to admit tha YOU have staganated

There you go again, Carl, mouthing obscenities and name-calling as a
sorry substitute for logic or anything like a cogent argument in support
of your wild opinions. Carl, what other hobby in the US has its own
satellites? And we have had satellites up for a long time! That doesn't
sound like we are stuck in 1950, does it? Because the main body of the
hobby cannot afford the money or time investment required to tinker with
the latest and greatest technology, does not mean there are not individuals
within the hobby that do, or that those who cannot are indifferent to
the efforts of the few. Your assertion that ham radio is stagnated, I
suppose because some of us still use CW, is ridiculous.

> .. and that's obviously more than your ego can allow you to accept ...
>

My ego doesn't stand in my way of accepting anything that makes good old
horse sense. Carl, I do believe you get so wrapped up in the theoretical
aspects of the hobby, that you don't stop to enjoy the everyday joys of
a good old-fashioned rag chew on ham radio. Stop along the way and enjoy
yourself. Relax and smell the flowers along the way.

> >
> >The man has a perfect right to his opinion. For him, the statement

> even more people be as confused about technical reality as you are Jim.
>

I am not confused at all. I simply said, and will say again, that if from
his perspective, CW is the best mode, then for him, his opinion is
correct. For instance, if a person only uses CW and SSB, experience will

prove beyond any doubt that CW will get through many times when SSB does not. That does not mean that other modes, with which the ham has no experience or knowledge, may not be better. Your crusade would perhaps be more effective if directed toward education, rather than toward the elimination of morse code testing. If you can prove the other modes are affordable, more fun, readily available, and more robust, hams will be persuaded to get involved with them. What you are doing is not having the effect you desire.

> STOP SPREADING YOUR LIES AND BULLSHIT!
>
> Carl - wa6vse
> carl@ais.net

Show me where I have lied, Carl. Opinions, clearly labeled as opinions, are not lies, but opinions. Please do not seek to cloud the issues through emotional outbursts and name calling. Incidentally, the only reason I replied to your post is because you posted to rec.radio.amateur.misc. In the future, if you will confine your posts on this subject to rrap, I won't see them, and won't be tempted to reply.

My point is this, that someone who resorts to such violent metaphors is emotionally unstable, because a call to violence, whether verbal or physical, allways follows an inability to resolve conflicts peacefully and logically. Such outbursts are indicative of a mentality that seeks to get its way through intimidation, rather through intelligent discourse and the application of reason.

>

Read your post again. You equate dropping the morse code test requirement to human death. The post you were replying to *did not say* that the writer was "devoid of any vision, goals, or hope for the future." *You* applied that to the writer yourself, then said the writer should just as well commit suicide. Pretty radical metaphor I'd say.

>

Carl, dear fellow, I have no need to twist anything you say. Why should I? I do encourage you to tone down your rhetoric and "mellow out". Is that twisting what you say? I have asked you to prove your assertions, or brand them as opinion. Is that unreasonable? Should you try this approach, I believe you would even find it helps your cause. OTOH, if you feel I am "twisting" something you said, then explain yourself more accurately. Say, "No, you misunderstand, I did not mean that." Then,

restate your position more clearly. Reasonable inferences drawn from your statements is not the same as "twisting" your statements.

Gary Coffman, for instance, has a position similar to yours, and I have enjoyed reading his very erudite posts on this and a variety of other subjects. I disagree with his opinion that morse code testing should be dropped, but I let it go at that, because he has many other interesting and informative things to say. In fact, I have read some of *your* posts in deja news that were well stated and clearly presented. I may disagree with your opinions, Carl, but I strongly defend your right to have them, and to express them.

Best Regards,

Jim - AD4VL

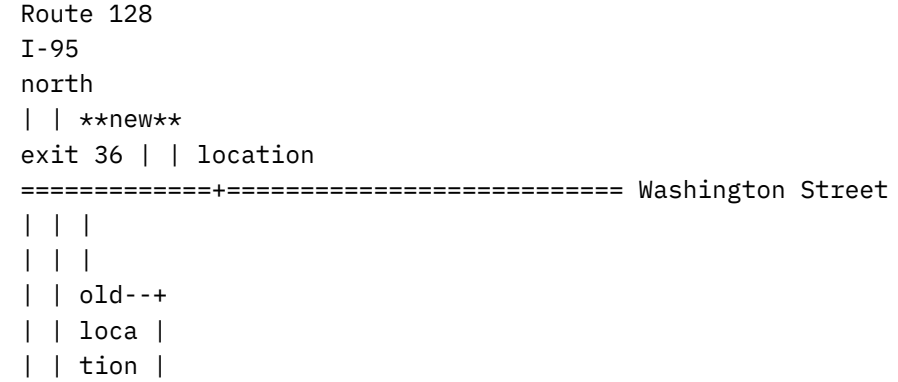
1. Unless otherwise negotiated with the seller, items bought at
virtually all flea markets, especially old or used equipment, are
sold 'as is' -- what you see is what you get. If you have a
problem with that, you should not be buying in such venues.

2. The Electronic Superstore in Woburn has moved and changed its
name to Electronic Planet. It is much smaller and more focused on
computer-related items. It is in a strip 'flex-space' center (i.e.,
quasi-industrial-retail building) on Washington Street just past
where you used to turn to get to their old location:



| | |
| |
south

There are two other interesting electronics dealers in the same little strip complex with Electronic Planet. One sells new components and tools, similar to You-Do-It, and the other is The Used Computer Store which sells just what its name implies.

The Electronic Superstore, in its larger incarnation complete with lots of industrial surplus and a collection of used test instruments remains in its entirety at its Manchester, New Hampshire location.

Cheers,
The Old Bear

> repeater (with the correct PL so my rig would break squelch) and the
> local one are keying at the same time will I get interference?

That is correct. If your radio can receive a strong
enough signal from the distant repeater, it will also
allow reception. However, in most cases, repeaters on
the same output freq usually employ different PL tones
for just that reason.

>
> Basically, I have some local repeaters and some distant repeaters with
> different PL tones. I would like to monitor the distant ones and
> listen in to those even if the local ones with the same frequencies
> were active at the same time. Is this achieved with the CTCSS decode?

The CTCSS decode will allow your radio to "open" up
only for the correct tone. What will happen here is
that your radio will receive the local repeater, but
you will here no sound. In otherwords, depending on
the PL tome set, that's the repeater the radio is
looking for. It will ignore all the others.

>
> I have a feeling many people use CTCSS to keep distant repeaters from
> keying while monitoring local repeaters. I would like to use it in
> the reverse... to monitor distant repeaters with the same frequency as
> local ones.

Unless your radio had dual UHF receive, I doubt it.
The fact that your are looking for a decode unit shows
it tio be an older model. Most of radios sold today
have the decode built in and the option is for the
encode unit.

Good Luck

The only reason you see so much of the Anti-code klan on the net is because most of them are bored with what little they can do on the ham bands. Carl is where he should be, here on the net with his little group of cult followers, all the time thinking he is being listened to with any seriousness. This place is like packet, A big waste of time. As for me I'll be on 40 cw. So-long Net Nuts!

> >should contesting be any different?
>
> Because the contest sanctioning body makes the rules?

What if the sanctioning body decides to state that 50% of a band
segment is "allowed"? Is that good enough? I'm sure some people
here would say no. But what if a time slice of some contest
weekend found more than 50% of the stations on the band operating
the contest. Would you be willing to allow a larger contest
area next time around?

Why not dynamically allocate portions of the band as demand calls
for it? That's what happens when people fill up empty frequencies
for whatever purpose they have in mind.

Everyone should ask if a frequency is in use before using a
frequency. In this way the use of the band is allocated to those
who intend to use it most. If some lid does not do that the problem
is with that individual and that should be dealt with.

> It is precisely because contesting is organized that it generates

> other activities are distributed more randomly and evenly. And that's
> a choice made by the contest sanctioning body.

Even if the choice were given to participants they would flock to those
times when they expect most other people would be on. The ARRL DX
Contest used to be 96 hours long (over two weekends) and I believe most
people concentrated their efforts in only one of them.

> I don't have a good answer for what to do about contests. Cummulative

> and/or mode of the day. OTOH, any band and any mode contests spread the
> load and aren't as disruptive to any particular other activity. Pluses
> and minuses again.

I don't have a good answer either. I admit that contests can use up
the band like almost nothing else. But it's a band full of people
making
contacts, using their radios and having fun.

And yes, contesting is explicitly in the Part 97 rules concerning the
reason for being in Amateur Radio. But I'd like Amateur Radio a lot
less
if every incident of "fun" to be found in Amateur Radio is denounced as
stupid, backward, archaic or whatever other insult someone wants to
throw
out.

I lament incidents where things can get ugly and try at all times to
refrain
from doing that myself. I've been run off by people who start calling
CQ
(non-contest) after I've been on a frequency for over an hour. Do I
think
that rag-chewers are jerks because of this? Of course not!

> Or, how about this? Lets have a new entry class for contests. This
> class is for stations who listen only and provide reports of stations
> transmitting over non-contest stations. Each report would be worth
> 1 point to the reporter, and would result in 10 points being subtracted

> stations to participate in that, I might even be tempted to submit
> a log, and it might do wonders for the operating manners of contesters.
> Bet a lot of them would wind up with negative scores. :-)

Yes they might. But would that be realistic? An effort to sabatoge
(sp?)
some individuals effort with a bunch of bogus reports smacks almost of
jamming but without having to generate a signal. It might be less
"disruptive" but the results are much the same!

AMATEUR RADIO SPECTRUM DEFENSE BULLETIN
Friday, October 18, 1996.

ACTION NEEDED BEFORE ELECTION DAY!

PLEASE DISTRIBUTE THIS INFORMATION TO YOUR LOCAL HAM RADIO CLUB and to any U.S. hams you communicate with.

If we do not act now, our 2305-2310 MHz frequency band will be sold at auction! Other Amateur bands may not be far behind. Please FAX or mail the following letter (or write your own letter) to your congress and senatorial candidates and incumbents before the election!

Here is a template for a letter, or you can write your own. Of course, please read the entire template carefully replace the information surrounded by "***" with the correct information for your letter. If you can, please tell us who you've contacted or send an entire copy of your letter. Use the e-mail address letter-copy@hams.com .

You can find the addresses and telephone numbers of your congressperson and senators using a World Wide Web browser. Use the web page http://www.voxpop.org/zipper/ . Pass your legislator's addresses and phone numbers on to the hams in your district, along with the template.

********** Cut here - Start of Letter **********

CONGRESSPERSON_OR_SENATORS_NAME ***YOUR_NAME***
ADDRESS ***YOUR ADDRESS***

Dear ***CONGRESSPERSON_OR_SENATORS_NAME***, ***DATE***

I am a Ham Radio Operator. There are over 600,000 licensed Radio Amateurs in the United States, and many of us are voters in your own district. You've probably heard of the role of Radio Amateurs as public-safety volunteers: we regularly provide emergency communications to local emergency services, the Red Cross, and to Federal disaster programs when natural disasters have devastated power lines and telephone networks. Amateur Radio also is also important to education: many of today's high-tech pioneers first learned electronics by becoming Amateur Radio Operators, and many inventions in communications and computer technology continue to be made by Radio Amateurs.

In the last hours of the past Congressional session, language was added to the Omnibus Budget Bill to sell one of the ham radio frequency bands! The 2305-2310 megahertz band will be taken away from Radio Amateurs, and will be sold to the highest bidder. I've included the

text of that part of the bill at the end of this letter. The bill was passed by Congress and signed by the President.

Reallocation of frequency bands is usually the jurisdiction of the FCC. We were deprived of any chance to be represented because the FCC's public comment procedure was bypassed, and because the text of the bill was not released to the public before it became law. Because the Omnibus Budget Bill was 2000 pages long and this text was added to it at the last minute, you may very well have voted for the bill without ever reading the portion that reallocated our frequency band.

Amateur Radio is currently in deep trouble holding on to its frequencies. In the past several years, we've lost several frequency bands and have been forced to share others with unlicensed transmitters that have effectively forced us off the air. Currently, almost every Amateur Radio frequency band is under attack by companies that would like to acquire our frequencies and charge others for using them. We've already lost as much as we can tolerate.

Please write back to me. Tell me if you voted to pass the Omnibus Budget Bill, and if you were aware of the provision to sell the 2305-2310 megahertz frequency band when you voted. Please tell me if you are willing to help us retain this frequency band and protect our other frequencies when the Congressional session begins in January. You can start helping right now by contacting the Washington counsel of the American Radio Relay League, Mr. Chris Imlay, at 202-296-9107 or 202-296-9100.

Many Thanks

YOUR_NAME
Radio Amateur ***YOUR_CALLSIGN***

Here is the text of the the portion of the Omnibus Budget Bill, public law 104-208, that directs FCC to sell our frequencies.

TITLE III -- SPECTRUM PROVISIONS

SEC 3001. COMPETITIVE BIDDING FOR SPECTRUM

(a) COMMISSION OBLIGATION TO MAKE ADDITIONAL SPECTRUM AVAILABLE -
The Federal Communications Commission shall --
(1) reallocate the use of frequencies at 2305-2320 megahertz and 2345-2360 megahertz to wireless services that are consistent with international agreement concerning spectrum allocations; and
(2) assign the use of such frequencies by competitive bidding pursuant to section 309(j) of the Communications Act of 1934 (47 U.S.C. 309(j)).

(b) ADDITIONAL REQUIREMENTS -- In making the bands of frequencies described in subsection (a) available for competitive bidding, the Commission shall --
(1) seek to promote the most efficient use of the spectrum; and

(2) take into account the needs of public safety radio services.

>NEVER be allowed in the U S of A !

National Technical Means have changed dramatically in the last
25 years. This has been necessary because foreign powers do not
have to comply with FCC regulations, and spies and criminals
never did comply. HF, and other parts of the spectrum, are filled
today with SS signals. The world's militaries probably account
for the majority of SS usage on HF today, but there is a significant
non-military presence as well. At UHF and above, SS has become a
normal technique for commercial as well as government transmission
systems. The huge proliferation of Part 15 SS wireless LAN products
is only the tip of the iceberg. This has forced improvement of NTM
to intercept or deny this sort of signal. The means to do this aren't
necessarily easy, but there has been no choice but to develop them.

Currently, amateurs face much tighter restrictions on SS operation
at VHF+ than do *unlicensed* individuals. This is not a sane or
rational policy. And amateurs today are forbidden SS techniques
which hold promise of great advantages on HF while foreign powers,
spies, and criminals are free to exploit such systems for their
own purposes. This too is neither sane nor rational.

The only persons being harmed by this regulatory attitude,
are those law abiding people who would seek permission before
using such techniques, IE who would be licensed, and who would
comply with certain parameter restrictions to ensure that LPI
would not be the primary feature of such systems. (You can have
most of the advantages of SS without Low Probability of Intercept
features, though such systems are a bit more clumsy to implement.
In fact, for amateur purposes, LPI is counterproductive. We *want*
others to be able to easily make contact with us and copy our
transmissions.)

>Each such signal must
>have a unique parameter other wise it could not be separated,
>detected and decoded from among the other simultaneous
>spread spectrum signals. Technology is not the problem,
>but because it might become detrimental to the sovereign
>interest. Further, such spread spectrum signals at HF,
>as being proposed, could not be separately and individually
>selected for denial to a particular recipient by jamming;
>all signals in the spectral region would also be jammed,
>or more nicely, denied.

That's not, in general, true. SS signals are generally very
jam resistant against techniques which try to deny large areas
of spectrum (that's because the signals are subject to only a
tiny fraction of the jamming energy at any given time), and
against techniques which try to deny narrow slices of spectrum
too (that's why they offer a useful band sharing benefit). But
they are subject to targeted jamming by signals copying their
characteristics. In fact, this is about the only way to jam SS
signals effectively. NTM have been developed to do that by
necessity since our potential opponents have no qualms about

fielding SS communications systems. Such methods could also be turned against licensed US citizens if the government chose. (If they did so choose, I'd suggest it was time to change the government, but that's an argument for another day.)

In an earlier time, a US Secretary of State said, "Gentlemen don't read other gentlemen's mail." And I might add, that they don't peep through keyholes or listen at doorways. However, it is clear that some people in the world are not gentlemen, among them some members of the US government, so a large espionage and counterespionage activity has been spawned. This has resulted in a technological arms race in secure codes and secure communications, and in ways to breech that security.

Techniques which were once secure, no longer are. If the non-gentlemen in government want to intercept and read a gentleman's mail, they often can. But conversely, this technological genie is well and truly out of the bottle. If a non-gentleman really wishes the government non-gentlemen not to read his mail, the tools are at hand to prevent that too (strong, even theoretically unbreakable, crypto systems exist, and are within reach of anyone determined to use them). Thus government snooping tools are only really effective against those who are generally either stupid, inept, or who are law abiding and thus should be of no legitimate interest to gentlemen in government.

When Secretary Hull said that "gentlemen don't read other gentlemen's mail", he was making a moral statement. But today, strong crypto techniques have changed that to "gentlemen *can't* read other gentlemen's mail if the gentlemen don't want it read." A wide net of receivers can, however, often detect that such mail is being sent.

In fact, large scale deployment of SS receiving capabilities would be an aid to detecting those who are not using SS for legitimate purposes. Hams have served in this way before by detecting and reporting message traffic in codes they could not understand to the authorities. Right now, because of restrictions against amateur use of any form of SS technique at HF, amateurs are generally unaware that SS activity is indeed taking place on their bands daily, and thus have no idea if this activity is legitimate or not.

If allowed to use SS, amateurs would be more likely to detect these other signals (thanks to the near-far effect of even LPI enhanced SS, a wide net of SS receivers has a much higher probability of detecting their presence than the limited, and shrinking, number of government monitoring stations). And even though the illegitimate signals might be strongly encrypted, and their traffic thus unreadable even by NSA's Crays, amateurs could at least report them to the authorities for further investigation as to their origin and nature.

Denying the very real other benefits of SS technology to licensed individuals, who would comply with restrictions against LPI and

really strong encryption, is a harm to those individuals while offering
no net gain to those in government who would monitor for legitimate
purposes.

ARLP043 Propagation de KT7H

ZCZC AP63
QST de W1AW
Propagation Forecast Bulletin 43 ARLP043
From Tad Cook, KT7H
Seattle, WA October 18, 1996
To all radio amateurs

SB PROP ARL ARLP043
ARLP043 Propagation de KT7H

Solar activity is still low, and we have just seen still another week of zero visible sunspots. October 16 was the thirty forth consecutive day with no sunspots. This surely means that we must still be at the minimum between solar cycles 22 and 23. The current forecast, based upon the mean values of solar cycles 18 to 22 says that the next cycle will not have the same average sunspot number value as January 1995 (24) until June 1997. The same prediction for solar flux shows that the value for January 1995 (81) is not expected again until December 1997. Remember that these are only guesses based upon averages for previous solar cycles.

Current forecasts predict some unsettled to active conditions over the next week due to recurring coronal holes, with a solar flux of around 70 for the next few weeks. Unsettled conditions will probably return around November 9, with solar flux dipping below 70 again after November 2.

After lasts week's inclusion of the A index in the summary of weekly numbers, I received some questions about what the A index is.

The A Index is based upon the K index over a 24 hour period. A new K index is announced every three hours on WWV, at 0000, 0300, 0600, 0900, 1200, 1500, 1800 and 2100 UTC. K indices are an expression of geomagnetic instability. The scale changes very little, so that each point is quite significant.

Ideally HF operators would love to see a constant K index of 0 and a solar flux over 300, but it almost never works out that way. During periods of high solar activity, the K index tends to be higher, because when the Sun is more active it spews out more protons, plasma and flares, which can destabilize the Earth's magnetic field, cause the ionosphere and polar regions to absorb radio waves and

generally make life miserable for HF hams.

Now that we are at the low point between solar cycles 22 and 23, the K index is usually quite good, around 1 or 2. During the high part of a solar cycle, it tends to be 3 most of the time, 4 when conditions are unstable, and 5 or even higher when there is a geomagnetic storm or even a radio blackout. Each point signifies a big change, so that we almost never observe a K index of 6 or 7, except when there has been a big solar flare.

The A index, based on all the K indices for the day, has a much broader range. The A index will move much more. While I am writing this, the Solar Flux is 69, A index is 4, and the most recent K index is 2. A typical condition during higher solar activity is a K index of 3 and an A index of about 15, or perhaps a K index of 4 and A of around 20 if conditions are disturbed.

During the past week The highest A index was 19 on October 13, and the highest K index for the day was 5, which is quite disturbed. The average K index for that day was only 3.7, as the K of 5 only appeared during two three hour periods, and several other periods had a K of only 2.

Sunspot Numbers for October 10 through 16 were 0, 0, 0, 0, 0, 0 and 0, with a mean of 0. 10.7 cm flux was 67.6, 66.4, 67.2, 67.6, 68.6, 69 and 68.6, with a mean of 67.9. Planetary A indices for the same period were 7, 7, 13, 19, 11, 5, and 8, with a mean of 10.

The ARRL Letter
Electronic Update
October 18, 1996

IN THIS UPDATE . . ..

* Gate 2 calls could come by late October
* Congress puts a piece of the 2.3-GHz ham band up for bid
* Special notice: ARRL election ballots
* Alexanderson alternator to take to airwaves!
* Solar activity flat--Minimum could be at hand
* ARRL field organization volunteers honored
* Tucker Electronics quits ham radio business
* Reno Faber, ZS6OF, SK
* In Brief: FCC toll-free area expanded; Call-sign server; DARA scholarships; K2BSA/1 JOTA operation; Young hams up; W9DCQ gets JSC post; RAC move completed; ZS5AKV reappointed; DOVE-OSCAR 17 update

---

FIRST-DAY VANITY CALL SIGNS COULD BE ISSUED BY MONTH'S END

As of October 4, a little more than 5900 Gate 2 vanity call sign applications had arrived in the FCC's Gettysburg, Pennsylvania, office for processing--most of them on paper but with an increasing percentage of electronic applications. An FCC spokesman hazarded a "guess" that the FCC could be ready to randomly process first-day Gate 2 receipts by the last week in October, if all goes well. By October 11, approximately 2500 day-one applications had been entered into the FCC's computer. Slightly more than 4500 applications were filed on September 23, the opening day of Gate 2. An estimated 100 or so applications arrived too early at the FCC's fiscal agent. The FCC has dismissed these applications, and affected individuals will need to file a new vanity call sign application and send in another $30 fee. Hams whose applications are dismissed must request a refund in writing and under separate cover.

Overall, since the vanity program began earlier this year with the opening of Gate 1 on May 31, an estimated 10,000 applications have been filed with the FCC for call sign changes.

CONGRESS DIRECTS FCC TO PUT 2.3 GHZ SPECTRUM UP FOR BID

Possibly for the first time ever, Congress has directed the reallocation of specific frequencies, including 5 MHz that Amateur Radio shares with

government services between 2305 and 2310 MHz. During its final hours before adjournment, the 104th Congress approved a provision as part of a much larger appropriations bill that directs the FCC to put 30 MHz of spectrum in the 2.3-GHz region up for competitive auction to help balance the budget.

The National Telecommunications and Information Administration (NTIA) had identified for reallocation the amateur segments 2300-2310 MHz and 2390-2400 MHz in May 1994, so reallocation of part of that subband came as no surprise (see QST, Jul 94, p 85, and Aug 94, p 72). Last year, hams scored a major victory by getting a primary allocation on the subbands 2390-2400 MHz and 2402-2417 MHz.

The recent congressional action will reallocate 2305 to 2320 MHz and 2345 to 2360 MHz--30 MHz in all--to "wireless services that are consistent with international agreement concerning spectrum allocations." The action was included in the massive, 2000-page Omnibus Consolidated Appropriations Act, which was passed by Congress and signed by President Clinton. The act now is Public Law 104-208.

Shortly after the measure was introduced in the Congress, the ARRL sent messages to House and Senate Commerce Committee and Appropriations staff members to alert them to the League's concerns and the possible impact the bill would have on the amateur allocation at 2300-2310 MHz. The measure also was opposed by the Senate Commerce Committee leadership, which stated that auctions ought to be used only for assignment purposes, not as a means of raising Federal revenues. The newly reallocated spectrum is to be put up for bid no later than next April.

ARRL Executive Vice President David Sumner, K1ZZ, said it's too early to know the implications for Amateur Radio. "Congressional action directing the reallocation of specific frequency bands is very unusual, and may even be unprecedented," he said. "We have been waiting for the other shoe to drop on 2300-2310 MHz ever since 1994, and to some extent we are still waiting." Sumner expressed the hope that the action might provide the opportunity to strengthen Amateur Radio's claim to 2300-2305 MHz.

Watch for further details in December QST.

SPECIAL NOTICE: ARRL ELECTION BALLOTS

Attention ARRL members in the Central, Hudson, New England, Northwestern, Roanoke, Rocky Mountain, and Southwestern Divisions. Ballots have been mailed to all ARRL full members in these divisions who were members as of September 10. If you are eligible to receive a ballot but have not received one by October 26, you may request a replacement from the Secretary, ARRL. Completed ballots must be received by the independent auditor who is overseeing the balloting no later than noon Friday, November 15.

Candidates are: Central Vice Director, Mike Hoshiko, W9CJW, and Howard S. Huntington, K9KM; Hudson Director, Frank Fallon, N2FF, and Richard Sandell, WK6R; Hudson Vice Director, J. P. Kleinhaus, AA2DU, and Peter J. Malvasi, WB2BYQ; New England Director, Bill Burden, WB1BRE, and Tom Frenaye, K1KI; New England Vice Director, Don Haney, KA1T, and Hal Offutt, K8HVT;

Northwestern Director, Mary Lou Brown, NM7N, and Mary Elizabeth Lewis, W7QGP; Roanoke Director, John Kanode, N4MM, and Reed Whitten, AB4W; Rocky Mountain Director, Gunnar Carlson, AE4W, and Marshall Quiat, AG0X; and Southwestern Director, Fried Heyn, WA6WZO, and Glenn T. Webb, W6FP.

WORLD'S OLDEST LONGWAVE TRANSMITTER TO BROADCAST MESSAGE

The world's only working Alexanderson alternator will broadcast this month from Sweden on 17.2 kHz. A nostalgic Morse code transmission at 0900 UTC on October 23 from station SAQ in Grimeton on Sweden's west coast will commemorate the declaration of the radio station as an historic building. The RCA Alexanderson alternator was built in 1924. The SAQ site, complete with six antenna towers and the 200-kW transmitter, are under the care and management of Telia Mobitel, a Swedish mobile telephone company, and the radio museum of the Radio Historical Society of West Sweden, which operates club station SK6RM. Ulf Sjoden, SM6CVE, has helped to organize the event.

SAQ also will transmit a test on October 21, at approximately 1100 UTC. SAQ requests listener reports of both the test and the commemorative message via telephone at 46-340-74251 or fax at 46-340-74195. Callers will be reimbursed for the cost of the call. The operator at SAQ is Bengt Dagaas, who is not a ham.

The Alexanderson alternator was developed during the early years of wireless by Ernst Alexanderson, a Swedish-American. The device is essentially a large, electromechanical high-frequency alternator with a high-speed rotor that's connected directly to an antenna system. A similar station once operated on Long Island. The circuit was used to transmit telegrams and messages between Europe and the US.

Last fall, Amateur Radio station 7S6SAQ operated from the SAQ site to celebrate 100 years of radio and the 70th anniversary of the radio station (see "Up Front," QST, Nov 95, p 14, for a picture of the Alexanderson alternator and the antenna system). During September 1995, SAQ itself transmitted a message to England which was relayed via landline from a BBC monitoring station to those attending a "100 Years of Radio" conference in London.

[Thanks to Rod Brown, WG8W; Ray Minichiello, AA1KG, of the Guglielmo Marconi Foundation USA; Ulf Sjoden, SM6CVE; and Nils Gustafsson, AB4FG, for their help in compiling this report.--Ed]

SOLAR ACTIVITY STAYS FLAT--THIS COULD BE THE MINIMUM

Sun watcher Tad Cook, KT7H, of Seattle, Washington, reports today that solar activity is still low, and we've just seen yet another week of no visible sunspots. October 16 was the 34th consecutive day with no sunspots. This surely means that we must still be at the minimum between solar cycles 22 and 23. The current forecast--based upon the mean values of solar cycles 18-22--says that the next cycle won't have the same average sunspot number value as January 1995 (24) until June 1997. The same prediction for solar flux shows that the value for January 1995 (81) is not expected again until December 1997. Remember that these are only guesses, based upon averages for

previous solar cycles.

Current forecasts predict some unsettled to active conditions over the next week due to recurrent coronal holes, with a solar flux around 70 for the next few weeks. Unsettled conditions will probably return around November 9, with solar flux dipping below 70 again after November 2.

We've begun to include the A index in our summary of weekly numbers. The A Index is based upon the K Index over a 24-hour period. A new K Index (an expression of geomagnetic instability) is announced every three hours on WWV, at 0000, 0300, 0600, 0900, 1200, 1500, 1800 and 2100 UTC. The scale changes very little, so that each point is quite significant. Ideally HF operators would love to see a constant K index of 0 and a solar flux over 300, but it almost never works out that way. During periods of high solar activity, the K Index tends to be higher, because when the Sun is more active it spews out more protons, plasma and flares. This can destabilize Earth's magnetic field, cause the ionosphere and polar regions to absorb radio waves and generally make life miserable for HF ops. Now that we are at the low point between solar cycles 22 and 23, the K Index is usually quite good, around 1 or 2. During the high part of a solar cycle, it tends to be 3 most of the time, 4 when conditions are unstable, and 5 or even higher when there is a geomagnetic storm or even a radio blackout. Each point signifies a big change, so that we almost never observe a K Index of 6 or 7, except when there has been a huge solar flare.

The A Index, based on all the K indices for the day, has a much broader range. The A Index will move much more. As this report is filed, the solar flux is 69, the A Index is 4, and the most recent K Index is 2. A typical condition during higher solar activity is a K Index of 3 and an A Index about 15, or perhaps a K Index of 4 and an A Index of around 20 if conditions are disturbed. During the past week The highest A Index was 19 on October 13, and the highest K index for the day was 5, which is quite disturbed. The average K Index for that day was only 3.7, as the K of 5 only appeared during two three-hour periods, and several other periods had a K of only 2.

Sunspot numbers for October 3 through 9 again were 0 across the board. The 10.7-cm flux was 69.6, 69.4, 68.5, 68.8, 68.3, 67.9 and 67.9, respectively, with a mean of 68.6. Planetary A indices for the same period were 13, 5, 3, 3, 4, 6, and 18, respectively, with a mean of 7.4. Sunspot numbers for October 10 through 16 remained 0 through the period. The 10.7 cm flux was 67.6, 66.4, 67.2, 67.6, 68.6, 69 and 68.6, respectively, with a mean of 67.9. Planetary A indices for the same period were 7, 7, 13, 19, 11, 5, and 8, respectively, with a mean of 10.

ARRL FIELD ORGANIZATION VOLUNTEERS OF THE YEAR

The ARRL has named seven League volunteers as Field Organization Volunteers of the Year. Cited for 1996 awards were:

* Atlantic Division: Bruce Zellar, KA2GJV, Fulton, New York
* Dakota Division: Larry Narikawa, N0OQA, Apple Valley, Minnesota
* New England Division: Walter Parker, W1SQV, Windham, Maine
* Northwestern Division: Donald Allan, KG7XY, Goldendale, Washington
* Pacific Division: Jim McCauley, AB6EU, Glenn Ellen, California
* Southwestern Division: Tuck Miller, KC6ZEC, National City, California
* West Gulf Division: Mac McDonald, K2GKK, Oklahoma City, Oklahoma

In a letter to each honoree, ARRL President Rod Stafford, KB6ZV, said that the award recognizes "accomplishments and contributions of the most exemplary nature," and included teamwork spirit, service to the public and fellow amateurs, exceptional performance, recruitment and training of other volunteers, and community relations.

"The League is a volunteer-based organization," Stafford concluded. "Without the selfless work performed by volunteers such as yourself, there would be no ARRL."

TUCKER ELECTRONICS BOWS OUT OF HAM RADIO BUSINESS

Tucker Electronics has closed its Dallas, Texas, retail outlet and mail-order business and sold its inventory to Ham Radio Outlet. The move put about 15 people out of work, according to Tucker's executive vice president and CEO John Holloran Jr. HRO has acquired Tucker's ham radio assests as well as those of Oklahoma Comm Center, which Tucker acquired in July. Holloran called the move "primarily a business decision."

"To us, it wasn't a viable business for us to continue," he said.

Ham Radio Outlet will not occupy the former Tucker store location, and all ham radio sales activity at Tucker ceased on October 16. HRO plans to consolidate Tucker's retail and mail-order operations with its New Hampshire store location. Tucker's toll-free order number, 800-559-7388, will be answered by HRO's New Hampshire store for now. Ham Radio Outlet will continue to market the Tucker brand of accessories. HRO also reports it plans to open some new locations.

Holloran said the move will allow Tucker Electronics to concentrate on its core business, distributing new and reconditioned electronic test and measurement equipment.

RENO FABER, ZS6OF, SK

Past-president of the South African Radio League Reno Faber, ZS6OF, died October 13 after a long illness. Throughout his life, he was dedicated to the SARL and its development, and he served the SARL in many capacities, including as its president and, for many years, as editor of Radio ZS. "His key is silent, but his memory will live forever. Rest in peace, old friend. We will miss you."--Hans van de Groenendaal, ZS5AKV

In Brief:

* FCC toll-free expanded: Residents of 26 states now can reach the FCC's National Call Center by calling 888-CALL-FCC (888-225-5322). Arizona, Washington DC, Iowa, Maryland, Massachusetts, Missouri, New Hampshire, Oregon, Rhode Island, Texas and Washington (state) are the latest to join the growing list as the Commission phases in the toll-free information service geographically. Plans call for the service to be available in all states by early 1997. The Call Center, located in Gettysburg, Pennsylvania, operates between 8 AM and 5:30 PM Eastern Time. States added to the system earlier this year include Delaware, Florida, Georgia, Illinois, Kansas, Maine, Michigan, Minnesota, Montana, Nebraska, Oklahoma, South Carolina, Vermont, Virginia and Wyoming.

* Call-sign server: Mark Downing, AC6PN, of Costa Mesa, California, invites vanity call sign applicants to use his Internet call-sign server to check for newly issued call sign grants. It's at http://www.rdatasys.com/~mdowning/fcc/callsign.html. Among other things, you can choose a list of the previous day's vanity call sign grants. The database also will provide your grid square and even generate a map (may not work with all browsers). It also allows searches by call sign or any combination of name, city, state, or zip code.

* DARA scholarships: The Dayton Amateur Radio Association is now accepting applications for its $2000 scholarships. Eight scholarships will be awarded. Initial applicants must be licensed Amateur Radio operators and high-school seniors graduating in 1997. To obtain an application, send a request with a self-addressed, stamped envelope to: DARA Scholarships, 45 Cinnamon Ct, Springboro, OH 45066-1000.--Stan Kuck, NY8F

* K2BSA/1 JOTA operation: The Burlington (Vermont) Amateur Radio Club is providing equipment and operators for K2BSA/1 during the Jamboree on the Air (JOTA) this weekend (see QST, Oct 96, p 49). K2BSA/1 will be operate from the Vergennes, Vermont, camporee site. QSL via KD1R, 943 Osgood Hill Rd, Westford, VT 05494.--Ralph Stetson, KD1R

* Young hams up: For the month of September, FCC statistics show that new licensees who are age 21 or younger, increased by 538 over the month of August.

* W9DCQ gets JSC post: Effective October 28, Doug Ward, W9DCQ, will be designated as the acting public affairs director of the NASA Johnson Space Center in Houston. Ward will fill the position currently held by Jeff Carr, who is leaving the center to accept a position with the United Space Alliance. Ward joined JSC in 1966 as a public information specialist, providing support to the Gemini Program and the Apollo missions. Prior to his current assignment as the chief of the External Affairs Branch, Ward served as the special assistant for public affairs in the Space Station Program Office and as the deputy director of public affairs.--NASA

* RAC move completed: The administrative office of the Radio Amateurs of Canada (RAC) has completed its relocation. The new address is 720 Belfast Rd, Suite 217, Ottawa, ON K1G 0Z5, Canada; tel 613-244-4367; fax 613-244-4369. Telephone calls will not be answered until things settle down, today or Monday.--RAC

* ZS5AKV reappointed: The Administrative Council of the International Amateur Radio Union has reappointed Hans van de Groenendaal, ZS5AKV, as the IARU satellite adviser for another one-year term. ZS5AKV also is looking for input from the satellite community on how best to focus on amateur satellites and the fraternity's contribution to scientific development and engineering. E-mail your ideas to zs5akv@amsat.org.--AMSAT News Service

* DOVE-OSCAR 17 update: Jim White, WD0E, reports that the analog telemetry data being sent by the DOVE-OSCAR-17 satellite is mostly inaccurate. The focus of the current test software that is transmitting this data is to diagnose what appears to be a hardware that is hindering the execution of the regular operating software on the satellite. Work continues in getting DOVE back on-line.--SpaceNews

Let's face it fellows, the thrill is no longer there. With the
internet, cell phones, etc., communication is a part of living any
more. When I was a kid of 12 (1950) it was truly thrilling to go to my

cousins house (K4EUM) in Tennessee and watch as he talked to people all over the world. Kids today, for the most part, don't see anything "magic" in talking on a radio. The price of new HF rigs doesn't do a lot to entice new-comers to amateur radio either. Heck, I can't afford one!

Oh, one more thing that would turn the younger generation off is reading through this news group. About 10% real ham info and 90% release of pent-up frustration lambasting the internet bandwith. Sorry I had to add something negative but all this BS really sucks.

Ken, KC4IH

I have the original, the R-4, Bob. As I recall, the major improvement in the R-4A was a solid-state VFO. After that, I believe more and more stages went to transistors, through the "C" model.

You may want to post this question on the *new* rec.radio.amateur.boatanchors newsgroup; the "4" lines qualifies as such.

'
'Is anybody else getting sick and tired of seeing these ads for
'pyramid-scheme "fundraisers?" Anything we can do to make them shut up?

I think we all are.

There just isn't much to do about it. If the scum was stupid enough to put
his real address on it, you might get results by forwarding the message to
postmaster@scumaddress.com or abuse@scumaddress.com.

I've gotten results by forwarding such to abuse@aol.com, when the person was
an AOL user.

However, someone really slimy created a program that allows businesses and
people to spam the entire newsgroup heirarchy with a message that comes from
an anonymous source.

In that case, the best thing is to make a hardcopy of the full post and send
it to your local US Postmaster (snail mail type). No matter the hook, this
type of scheme eventually involves the post office and is completly illegal.

And these idiots are nice enough to put thier physical addresses down.

I've heard that the postoffice actually has an internet address that you can
forward these messages too, but I do not know what it is (if such exists).

>73 de
>Egil.

Well, yes, I was going to say cables, but not in the "normal" sense
of the word. Check out "leaky" coax. This is cable that has about a 20%
braid, and an aluminized mylar 1/2 sheild. It looks like 50 ohms, but
leaks like a seive. Specially designed fo ruse in tunnels such as coal
mines for communications. Esentiallyl, you string the cable end to end,
and attach a pair of passive antennas to both ends (out in the clear.)

You can communicate via the cable to the antennas, and on to the "rest"
of the world at that point. And it's not frequency sensitive either. A
good dual bander for 144/440 operation would cover about 99% of the
radios. (Or you can add power splitters and add additional bands that
you would want to cover.

73 es GE from Jeff
(Who did research on leaky cables back in 1972)

I won't repeat everything you said, but that type of activity has been going on in California (and other places) for years. The only difference is that they have the UHF and VHF stuff at the same site and that's usually on a mountaintop, because everyone (almost) can hit the mountaintop site. The UHF acts like a regular repeater so those on UHF can hear what's being said and the VHF radio (which is controllable) is used to talk to those on VHF. It was/is called a "remote base station" and is, I'll grant, a little different than what you're doing there and for a somewhat different purpose. It sounds like you guys have used your heads to overcome a problem and came up with a workable solution. It may be a little lower tech, but I'm sure it works.

>Many of today's radios have gone to surface mount parts, and that
>makes repair a lot easier. You only need to be able to get to one
>side of a circuit board, so you often don't have to disassemble
>the radio very far in order to replace the bad part. SMD has made
>the repairman's job much easier.

Greetings. The topic has been lost here... "repairman" not the same as "equipment building and repair"... All you needed back then was a roll of solder, some flux, and a 60Watter... compare this to the $500+ Pace SMD rework station... Yes, a repairman IS equipped to repair and maybe even "homebrew" with SMD... but the average Joe "Ham" Sixpack is certainly not.

I can easily repair a DIP-based device... a $15 desoldering iron from RatShack and some experience gives me perfect unsolders 99% of the time... but I can not afford an SMD station.

Not that I don't improvise... I snip the legs off the SMD device with a Dremel and glue down the new device on top of the old and solder in 30ga wires from the old pads to the new.. or use a DIP... or just toss it.

[sorry, pet peeve]

Take care.

>reasonably construed as a subsidy of sorts.

No, I would mantain that it is NOT a privelege, but it IS a right ... you're using the same sort of "the state owns everything and doles it out as it sees fit" mentality as our former eastern adversaries ... or the Democrats ... who try to make it sound like a big shitting deal to "reduce spending" (by not INCREASING as much as they had planned) or "cut taxes" (by taking less of OUR money) ... just like the government has to stop acting like it's THEIR money, when it's really OURS, so do they need to stop acting like anything that they regulate is THEIRS instead of OURS ...

By I'm diverging a bit ... the real issue is that we "made a deal with the devil" wherein we agree (by accepting the purposes outlined in Part 97.1) to perform public service, educate ourselves in/advance the radio art, etc ... in return, we "get paid" by having the use of a lot of very valuable spectrum ...

>>Hams are SUPPOSED to "pay back" society for the use of our vaulable
>>spectrum allocations by performing public service and by learning and
>>training ourselves to be better in terms of technical knowledge and
>>skills.

>intelligence.

No. Mike, I really don't think so ... when I say something like that it's in the face of someone deliberately ignoring plain, simple facts .. they're either choosing to ignore the facts, or simply too stupid to understand them ... I find a little of both from the pro-code side at times ...

>>> I strongly dispute his

>
>Translated: "You're not using any of our new whizz-bang super-techno
>communication modes. Yes, you too can merely read words on a computer
>screen and let the specialized ICs do all the work for you!"

Nobody said anything about a computer screen ... but yes, the ICs can do a lot of the work for you and they can do it much better than you ever could hope to ... that's scientific fact ... which scares hell out of the Luddites ...

>>You can't continue to confuse the issue with your nonsense, Jim ... his
>>utterance of Morse Myth #1 is patently false according to any reasonable
>>engineering evaluation,
>
>Its nice that you preach everything in theoretical terms, but practice
>often yields different answers. Shannon's Law dictates what the
>theoretical maximum thruput of a bounded channel is, yet often you'll
>find that it is much less because conditions are not optimum, or you
>do not have the necessary equipment to make totally efficient use of
>said channel.

There are, as Gary outlined in a post today, so I'll not repeat it here, many modes that outperform OOK Morse ... to deny this is to simply confirm one's ignorance of technical reality ... something that many por-code Luddites seem to rejoice in doing ...

>On the other hand, give me a 250hz CW filter, as well as notch, APF,and
>shift/width controls, and I can pick up a CW signal that you never
>knew was there.

I've worked more CW than I cared for and I'm quite confident that, given equal equipment, I could "hear" any CW signal you could hear ... I might not have the wetware conditioned response to decode it as fast as you, but I could hear that the dits and dahs were there ...

On the other hand, the proper digital gear will decode error-free messages at signal to noise ratios where you would NEVER be able to

even *begin* to hear the dits and dahs ... this is fact, whether you like it or accept it, or not ...

>super-techno equipment?

That's the PROBLEM Mikie ... too many Luddites, too little progress. That's why we need to modernize the rules and regs, including getting rid of that backward test for an 1800s communications mode (those who want to use it are free to do so, but no more forcing it on everyone to the detriment of the entire service ...)

>The internal combustion engine is almost a century old too, but still
>seems to be chugging along just fine.

The internal combustion engine of today bears only modest resemblance to the one of nearly a century ago ... and benefits considerably from modern electronics ... as do many other on-board systems ... some new cars have nearly 20 microcontrollers on board ... did you know that ???

5421. Knickerbocker Amateur Radio Club - WA2OEG interference

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-18 00:00:00 UTC
From: kroser@pobox.com
Message-ID: <3266e784.84363103@news.openix.com>
Source record: 214539

I'm looking for assistance in trying to resolve a persistent interference problem. A simplex phone patch identifying as WA2OEG has been on our repeater input on 147.595 for quite some time. Despite numerous requests to the person listed as the club's trustee to please QSY, and his agreement to move it, this patch continues to operate on our input frequency.

Considering diplomatic requests to resolve this have failed, what is my next resort? I can't involve our frequency coordination body, TSARC, because they are apparently out of business. Besides, no frequency coordinator can be an official enforcer of FCC rules.

If you are a user of this patch, please ask the trustee to move it to another frequency. I can't tell who the users are because their callsigns are never broadcast on the patch itself, just the callsign WA2OEG.

5422. Can I use CTCSS decode to do this...

Newsgroup: rec.radio.amateur.misc
Date: 1996-10-18 00:00:00 UTC
From: dber@tiac.com
Message-ID: <326702d8.832841@news.tiac.net>
Source record: 214540

I'm thinking about getting a CTCSS decode for my 2M rig.

The way CTCSS decode on a 2M rig was explained to me was that it would not break the squelch when the received frequency does not contain the programmed PL tone. However, does this mean that if both the distant repeater (with the correct PL so my rig would break squelch) and the local one are keying at the same time will I get interference?

Basically, I have some local repeaters and some distant repeaters with different PL tones. I would like to monitor the distant ones and listen in to those even if the local ones with the same frequencies were active at the same time. Is this achieved with the CTCSS decode?

I have a feeling many people use CTCSS to keep distant repeaters from keying while monitoring local repeaters. I would like to use it in the reverse... to monitor distant repeaters with the same frequency as local ones.

Thanks much in advance and 73,

Dave Bernazzani

No, it's not spark transmission. It's continuous-wave, not damped-wave,
radio energy generated by an ac generator.
